Actually, the National Socialists, though they were far from Second Amendment-type purists, considerably loosened gun restrictions in Germany compared to the previous "Social Democratic" regime. Just compare the 1928 and 1938 laws. (A book has been published which prints the two laws side by side, so they can be easily compared. It's called _Gun Control in Germany, 1928-1945_ and I think Noontide Press in California, among others, has it. It is also for sale at a lot of gun shows.)

Guns were widely owned by private individuals in Germany from 1933-1945, but were required to be turned in to the Communist and other Allied authorities when the occupation governments were set up after the war.

....
> The American system of justice may be one way to go, but

....

I'm not necessarily disagreeing with you re the Swiss and the Americans, but this "democracy" bit is a poor use of the language.

Switzerland and the United States are republics, and have constitutions for a very important reason -- to protect us from the tyranny of the majority; to secure rights that no majority and no legislature can ever take away, no matter how large or passionate the majority is that wants to do so.

Democracy and tyranny are perfectly compatible. It's called mob rule.

Democracy and freedom are mutually exclusive.

I'll take freedom.

Cheers,

Kevin, WB4AIO.

The argument is about the definition of people.
I believe it to be we the people as in every citizen in the United
States os America. Therefore Congress can not pass a law which
infringes on ME as a person covered in the group called people.
So in that context the second amendment bars congress from passing
ant gun law.
How did a debate about guns get into the newsgroup?

Just found out that HyGain made the announcement at Dayton that
they will now be selling antennas and other equipment on a factory
direct sales basis. They have installed a toll free number
(800-898-6723) for factory direct orders. Also, they have a web page
at http://www.hy-gain.com with a listing of all the produsts and the
factory direct prices.

When I checked the factory direct prices, they appear to be
about 10% LESS than prices thru the HyGain dealers. Examples
of prices are TH-11 at $850.46, TH7DX at $639.35, and 204BA
at $379.53

Rotators, VHF, UHF, and other equipment is also included in
the products that can now be purchased factory direct.

It is against the law to sell ivory...but criminals do
It is against the law to sell cocaine....but criminals do
It is against the law to kill or steal...but criminals do
It is against the law for convicted felons to own guns...but they still do

Outlawing guns will have no effect on criminal use or aquisition of weapons.
It will only prevent law abiding citizens from owning guns. It is a
documented fact that private gun ownership thwarts thousands of crimes per
day.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will

be attempted. This does not pertain to new guns alone as if you take in a gun for repair a background check is supposed to be ran on you.

How do you feel about a law that was ruled, at least in part, as un-constitutional being beefed up to suit Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol Hill now that would kill Brady cxompletely should it become law. It needs help now as there are only four signed on to it now.

If you want to help you could contact your people in Washington urging them to sponsor H.R. 2721.

Those kind of caps are only good for pulse-discharge applications, and have a short life expectancy when used as a filter cap in a power supply. The AC ripple current causes them to overheat pretty quickly. Great for railguns/photoflash/exploding wire applications, though!

I would check with the manufacturer before giving up on them, but most of those capacitors really don't hold up very well when passing appreciable ripple current. I learned this from experience. I had a bunch let go in a large HV power supply once, and it made a REAL mess! Mineral oil and bits of foil and paper everywhere! (at least there were no PCB's in them) When one of those shorts out, the spark discharge that usually goes into the flashtube or laser tube is dissipated internally, and generates a lot of gas pressure inside the can.

Body handling: Binary attachment payload not displayed: vcard.vcf

"me to"

Bob, that pretty much sums it all up -- and
for those of us who never have, and who never
will use Ebay on either end of a transaction,
the ability to set a filter on a message title
would be wonderful.

Problem is, how do we convince the abusive
Ebay sellers to do this?

Perhaps we could persuade Ebay to urge
sellers to place "Ebay" in the title as a
requirement of using their service -- after
all, there are plenty of buyers from Ebay
who think it's wonderful; and it would be a
significant marketing point for Ebay.

And the fact that there are a lot of us
out here who'd be delighted to put a bullet
through Ebay's server -- who'd calm WAY DOWN
if we could filter Ebay posts and email --
Ebay could placate us, and make us fade away
into the distance, freeing up more bandwidth
for them to do their thing.

Conveniently, where we don't have to see them.

N6OTQ

OTOH, when Ebay pushes the price of used sweep
tubes up into three figures, I might change
my tune. That, or set up a factory to make
6KD6es.

Listening, Svetlana?

All,

I have a Drake TR-22C 2-meter transceiver. I'd like to buy crystals for
it, but where is a good place to find crystals and what formulae do I need
to calculate what crystals I need to have in the receive and transmit
slots? Thanks for any help in advance.
Chuck, looking to get my TR-22C online

I have a few 100uf 2.2kv defib caps. Won't work for shrinkin quarters,
but great for filter caps. Each is a little larger than a coke can,
and weighs about as much. 2 in series should work well. Make me an
offer.

I remember seeing some fairly common TV repair grade equipment in a
movie _Plan 9 from Outer Space_ (regarded as the worst movie ever produced).
The emeny aliens from space had a few ocilloscopes and frequency generators
on a table in one scene.

On the TV show _Voyage to the Bottom of the Sea_ my father spotted the men
on the submarine using a cheesey (his word) Eico oscilloscope.

In _2001_, the astronauts were using old Tektronix scope probes to trouble-
shoot a comm link box the HAL computer reported as defective.

How many of the estimated eighty thousand to 2.5 million persons
that have used a gun per year in defense of themselves as reported by
the NCVS and others are you willing to sacrifice to those that would
have done them grievous bodily harm? Would you tolerate the increase
in violent crimes and deaths as long as the potential victim couldn't
defend themselves with a gun? Are you satisfied that the increase in
deaths caused by violent criminals will justify making guns illegal?

Hi Fred -

I was thinking the same thing about mine a few years back. Even went so far as to ask Tim, WA1HLR what was involved. As I recall, it requires a fair amount of work, as I don't think its a 'plug 'n' play' mod. I'm not even sure if the envelope will fit in between the two tanks. Mine still has the 4-125 in it. But! It can be done, has been done.

You wouldn't happen to have any spare 75TH's kicking around, would you? I broke one restoring the modulator deck. :(Things are as thin as eggshells!

You can take any dictator. This is certainly the most extreme (and most undemocratic) way of a government to control "its" people.
You should be careful, however, to compare the government's monopole of using force, as it is used in (quite democratic) countries like Switzerland, Germany or Great Britain with a dictatorship like Nazi-Germany. It is rather arrogant to condemn any idea other than Your own one. The American system of justice may be one way to go, but there are other democratic systems in the world, which realize the same idea of a free society in a slightly different manner.
BTW, do You have a reference for what You mentioned above? I have never heard, that Hitler ever seriously hided his true intentions, why he wanted to disarm the "man on the street" (except in his and Goebbels propaganda, which You won't count much on, do You?). I'd be really interested, where You have that idea from.

Regards

Robert

Have the late 70's vintage Yaesu QRP station the FT-301S, FV-301 remote vfo, and the FL-110 matching QRP amp.

Rig has the optional Yaesu cw filter and International Radio 2.4 khz SSB filter. Also has the optional SSB filter in the RF speech processor ckt which allows RF speech processing capability. This is not an AF speech processor. Rated at 10 watts output max but is variable down to 0 watts from the front panel. Comes with the stock Yaesu hand mic. Rig has WWV/JJY rcv capability and has an "AUX" bands position for an optional band (I was going to install 17 meters). Also has xtyl control capability from the front panel--selects up to 11 xtyl freqs.

Remote vfo included which has the accessory cable for hook up.

FL-110 QRP amp is included. 5 watts in = 50 watts out, 10 watts in = 100 watts out. Covers all bands 160 - 10 meters. Have not tried it on the WARC bands since this station was designed pre-WARC.

I do not have the manual for the vfo. This is an operational station. I'm selling because I am looking for a Ten Tec 546 Omni C.....

so I'll sell this setup for $475.00 or trade for a nice Ten Tec Omni C with matching 252MO supply.

I've been running the Yaesu station on a deep cycle marine battery and it works great.

Yup. Knives, and simply threats, are also highly popular, and
effective.

>No kids ever killed teachers and students with a pick ax.

Don't count on it. Here, in Rochester, the weapon of choice to kill
teachers and students is also the knife. Unfortunately, it has proven to
be a highly effective one.

Message-ID: <01bd844a$a0d371a0$513f2acf@default>
Source record: 105038

Have a non functional Swan 100MX transceiver. Know problems include previous attempts at repairing final amplifier base bias regulator circuits, transistor blown and some tantalum caps lifted in an effort to locate 800 ma current draw by pa deck with power off. 9 volt regulator for the rest of the radio blown too. Looks otherwise complete. This is not a show piece, cabinet needs to be repainted properly and all the correct screws need to be replaced. All knobs and controls look good. My best guess is that the radio could be made operational with 2 to 4 hours of work plus parts. I have manuals, operators on service, plus some old sales brochures. Nothing else, no mic, no brackets, only a very short incorrectly socketed power cord. $110.00 shipped CONUS, offers gratefully accepted.

To Mr.John Andrews

Hello!
Thank you e-mail.

I am not interested in MAC PC. I'm sorry.
I have used PC-AT.

JRC-245 is very good condition.
So you have NRD-535D, I know it have good design,performer.
Noise level is better than NRD-535D.
Because it does not have display noise.

If you can get it, you will like it.
My JST-245 is mint condition.

Best regards,
73

I have for sale a nice National Model NC-125 Shortwave general cov
rcvr. Front panel is in excellent condx. Has a few scratches on the top.
works good but could be improved with some alignment and recaping. Asking
$125.00 plus shipping.

2532. S-38 cabinet refinish

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-21 00:00:00 UTC
From: mark@flyjetwest.com
Message-ID: <3564454f.70059664@news.concentric.net>
Source record: 105046

Am refinishing an origional (6 tube) S-38, and need a large picture of it's face to recreate the markings. Will use laser printer to create white decals or maybe screen w/ paint.

I'm thinking of having it powder coated black instead of paint, any comments? Origional finish was beyond repair and removed, found spider veins of rust underneath. Logo is brass and not removable, stripped also, and will hand-repaint last. Also need source of origional knobs.

Thanks in advance for your advice.
Mark in North Hollywood, CA, USA

2533. FS: Communications and Electronics books

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-21 00:00:00 UTC

I have the following books (all in excellent to new condition) available:

Practical Electronics Troubleshooting by Perozzo
Good information on troubleshooting all sorts of electrical
and electronic devices $ 15

Understanding Data Communications by Friend
The title says it all! $ 15

Understanding Communications Systems by Cannon
This one covers all sorts of communication systems -- not
just the data communications like the one above. $ 15

An Introduction to Fiber Optics by Shotwell
Not in great depth, but an easy to understand book $ 15

Introduction to Electronics and Electronic Shop Practices
by Worden - Mainly a "Shop Techniques" book, with lots
of reference charts, etc., but some theory included $ 18

Digital Electronics by Uffenbeck - Technician Level text
Covers from number systems to shift registers to Programmable
devices to interfacing $ 25

Electricity - Principles and Applications by Fowler
Part of McGraw Hill's "Basic Skills in Electricity and Electronics"
group of texts. Mainly theory, in easy to understand
explanations. $ 20

Electrical Measurements by Smith & Wiedenbeck
Classical measurements book - Engineer level $ 15

Principles of Electronic Communications by Mandl
Includes modulation, amplifiers, noise, transmission lines,
antennas, etc. $ 18

I also have Boy Scout books:

Exploring Handbook - 1958 - close to new condition $ 20

Handbook for Patrol Leaders - 1950 copyright - 1959 printing $ 18

1986 American Red Cross "Expect the Unexpected" $ 2

If you would like more information about any book, please e-mail to
W8EK@usa.net. All books are in good shape.

Prices do not include shipping from NE Ohio.

2534. Re: The truth about gun owners

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-21 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <6k1hlm$26b$3@geraldo.cc.utexas.edu>
Source record: 105048
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.ra

Not another responce...but Yes!

The median demographic for ham operators is the following..
Middle aged white with above average income.
(read: $500,000+ net worth and three vehicles)
And what is that group's average belief system?
Republican, christian right wing, and paranoya theory reactionary.
Just listen to 3853..or now even 20 meters.
Why? The white power base in this country is loosing power.
The country is becoming browner. Get used to it.
And the gun ownership issue is just an outgrowth of the basic
fear and insecurity of people who are having their unchallenged
supremacy threatened. All the bravado is inspired by fear. All
the "loss of freedom" paranoya is fear talking. When you cannot
adapt to the new reality, you scream and yell and act as if
you are not scared. The truth is- you are.
Remember that nothing will protect you from a tidal wave of south
americans immigrating. You will know 30 words of spanish.

How about taking responcibility for the fact that- if your life
seems to stink- it is YOU that is to blame. It is not some guy and
his wife in D.C. of whom you have no direct knowledge. Of whom you
have been spoon-fed information by people with an adgenda. Unless
you indeed have ESP, your opinion is the direct result of a multi-
million dollar (and now tax dollar) campaign by the sore loosers.
(what a simple and overlooked concept! Huh!)
It wouldn't take 50 million to indite anyone reading this.
And if the whigs were "getting any", they would forget all about
those who were- and do the job they were sent to do. -I don't
know any attractive women who like crusty -teeth grinding paranoids
with bad attitudes. Go ahead, take a picture of your right hand
and put it in your wallet.

So...get your self tharapy flames fired up...but remember that
true personal power comes from within...you can't buy it in a gun
store, and you can't get it from a bible beater. Your investments
will pay out, and your padded ass will wither on a feather pillow.
So Shut Up.

Bob

PS: Repeat this tharapy mantra: Hillery is richer than me, better looking
than me, and smarter than me - and it doesn't bother me a bit.

Source record: 105051
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is as hvy duty as they get. Rated 1kw AM. Huge roller inductor and vacuum variable inside a pressurized coffin style cabinet. Remote control unit has two meters--one for L position and the other for C position. Will work as an auto remote tuner with a homebrew adapter that you would have to build. As is it is a manually operated remote antenna coupler. You supply the interconnecting cable. Currently pressurized with nitrogen and ready for installation. I picked it up over a year ago as Navy surplus but have decided not to use it. It's too big and bulky for my installation. I have the tech manual.

Will trade for HF rig such as Corsair II, loaded Omni C with rmt vfo and supply, etc,.... or possibly an HF amp.

Kreblon@ccwf.cc.utexas.edu (Robert J. Nagy) wrote (among other - I'm being polite now - trash):

>PS: Repeat this tharapy mantra: Hillery is richer than me, better looking >than me, and smarter than me - and it doesn't bother me a bit.

What is " tharapy"?

And, who the heck is "Hillery"?

Do you mean "Old Thunder Thighs"??

I see from your email address that you are associated with "utexas"; have you enjoyed your association with the "browner" (your word) side of life? Is it to blame for the air, attitude and errors in your post?

I won't be around to see what you predict and neither will you. But, I can tell you this: that bitch ain't richer than me (at least, not after she pays up!), she ain't better looking than anyone I know (of course, I haven't met you or Clinton's Cabinet) and if she had an ounce of smarts, she wouldn't have hitched up with the "Arkansas Scumbag". You are right about one thing: her personal characteristics don't "bother me a bit." It is her political characteristics and guys like you that bother (not scare) me . . .

Are you related to anyone named Fisher?

And, speaking of losers - how's our old buddy Jim Wright doin' these days? And old what's her name - you know the big mouth at the Demo Convention - AnniePoo? You think they might be related?

And, winners? My favorite (of course) YOUR present Governor . . . . and future President of the United States . . . what a fine fellow!!

Got to go get some sun, I want SO badly to fit it in . . .

If I unloaded my magazine(s) on him, he'd be covered with ink and
newsprint. AND probably about 200# of old QSTs.

Come to think of it, that'd be a great way to get rid of a lot of old
publications.

I fail to see any connection between Amateur Radio and the pros and cons of gun ownership. Perhaps alt.talk.guns would be a good place to "shoot this one out"? ;-)

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise

full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

>I fail to see any connection between Amateur Radio and the pros and cons of gun>ownership

One again guns are responsible for student deaths. If the gun did not exist do you think this kid would have gone to the cafeteria and tossed knives? The ham radio connection is that most hams have no guts and they are more likely to have a gun to "buy" their guts.

Please visit my World Wide Web Site, you have never seen a page like it. You will see:

1. A naked chic
2. An actual picture of Burt on the throne.
3. The writings of me and others on ham radio, hear a typical ham contact.
4. The warm side of K1OIK, hear me speak, see me with famous people.
5. A test for your SVGA monitor
6. Pictures of me and my family.
7. A Nazi connection in ham radio?
8. See now the future of ham radio.

>Burt Fisher Teacher of video, broadcasting and electronics

Media is focusing too much on one violence.

As media broadcasts the violence, the situation becomes even worse
(you hear this and this is going on and so forth and some people think
it is normal to do such thing). Anyway... please don't focus too
much... you will make it even worse...

There was a research done regarding to the TV / movie etc. There was
a small community with no TV (ie. no freq to receive and no cables
either). After setting up the TV system (either freq or cable), the
crime rate raised suddenly by 2 times or more.

As for guns, I believe that the parents are responsible.
If the parents are responsible for their kids, the kids will be
responsible for themselves. It's natural. And amazing enough...
most kids (who get focused on medias) get guns from their family...

There are about 40,000 deaths do to DUI in the US each year. Obviously
cars are the problem. Should the government come to your house and
confiscate your car?

If the cars did not exist, 40,000 people who died last year would be
alive.

No, he might have left explosives (one of his "interests"), or thrown a
molatov cocktail, or mixed up a toxic gas from recipes on the 'net, or
driven a car into a crowd of students, or any number of other forms of mayhem.

If he had been thrown into jail when he was caught and arrested for
bringing a **stolen** gun to school the day before instead of having his
hands slapped and being sent home to his so-called parents, do you think
he would have been in that cafeteria?

Burt: unencumbered by the thought process.

Early Vibroplex bugs used a finish called Black Japanned, which consisted of a thick lacquer or enamel paint. I'm refinishing an old bug from the 20's (it's a sad looking thing which apparently had a very hard life) and was wondering in anyone had an idea of how to dupicate that Japanned finish. The suggestion I currently have is to use multiple coats of gloss spray enamel like Krylon. Any other suggestions?
73,
Puck

What I have been able to do is go to a local auto parts shop that has a "for real" paint department. They have a color densitometer and the comprehensive paint chip books. (Note: Go outside in the sunlight to make your match). They have batched either spray or liquid for me and have done a great job. This method is great for touch up as one can match to the faded color. Can't find OD green? Can't get the proper dullness? If they're good, they can match it via additives. Once they have your "spec", repeatability is virtually assured. I've done R-392 cases, PRC and VRC equipment and it came out FB. Its a bear sometimes to haul cabinets, etc., to the shop but the results are worth it.

I'm a ham in Oregon. I DIDN'T APPROVE OF ANYTHING to do with shooting anyone. Thank you Butt Fisher for your kind, accurate portraying of how we here in Oregon feel about this tragedy. It's so nice to know you are interested and well versed in how we think. You know, there could easily be someone on one of these list that did know a person or the family of a person injured or killed by that kid in Springfield. But then, you are only doing your part to clean up the world, aren't you. Nice to know you care so...

>

Myself and most of my schoolmates had a history of killing animals when we were young......

Deer during deer season; fish during fishing season; hogs, steers, and sheep during fall butchering season;.....

..... so why were we in school in the first place?

What's your point?

73, de Hans, K0HB/4ID

Guys- Answering posts like to ones about guns
and wheither hams are fit to breathe is a fool's game.
In internet parlance, it's known as "trolling."
The troller starts the tread by posting something outrageous
and/or off-topic, then enjoys the tempest and chaos.

Ham Radio newsgroups are infamous on the net for
being perfect "troll" playgrounds!
Burt is only one troll. There are more.
There's only one way to fight them.
DON'T REPLY! DON'T RESPOND!
The thread dies right there and the troll
slinks off to bother someone else.

Alas, the voice of one crying in the wilderness. Would that they'd only listen and heed your advice, Dave. I've set up my newsgroup filters to purge all known forms of "Burtness," but have yet to come up with a filter for "Morons Who Respond To Burt and Other Trolls." Nothing posted by the "Burts" of the world is worth responding to, and I'll never understand why someone would think that his/her opinion on gun control or any other unrelated topic is of the slightest interest to anybody else. Everybody has an opinion (not to be confused with knowledge) and everyone has a rectal orifice. Both are best kept private.

Hams support the Oregon shooting? Funny, I'm a ham, and a gun owner, but I don't recall showing support for it. Matter of fact, I think it's disgusting. To broadly label such thing against a GROUP is pretty hard to do and be able to back it up with facts.

My weapons are kept where I can get to them, but then I don't have kids to worry about. IN MOST CASES, parents ARE (SHOULD BE) responsible for the actions of their children. But, in this case if he killed them too, then you can't hold the parents other than for that which they may have failed to do PRIOR TO their own demise. Like the day before, when he took the gun to school and was thrown out, but hey, they may have been dead already too, at that time.

It is PEOPLE who kill, NOT THE GUNS. Just like when a drunk takes a car and kills. It isn't the car. Cars, guns, knives, baseball bats, bricks, pipes, etc. Any weapon of choice, does NOT have a mind nor a consciounce to make the choice.

But it is WRONG to say OPENLY that a GROUP supports such a thing. You are speaking for me as well by that statement, and I sir, NEVER support such a dastardly deed. Let me speak for myself, PLEASE.

Hi , I'm looking to Buy either a Homebrew or commercially made Two Meter (144 MHz) and or a (440 MHz) Tube Amplifier. It must be able to amplify an FM Signal and of course have a built in or external power supply. The Power Rating would have to be in the 500 Watt Class. Designed to run off a 120 volt AC Line. I don't want any junk ! I want a good solid reliable amplifier. I will be using it with a Kenwood 144/440 MHz.FM Mobile Radio, so the drive requirements would have to match the exciterï¿½.144 MHz. 5 Watts, 10 Watts or 50 Wattsï¿½.440 MHz.. 5 Watts, 10 Watts or 35 Wattsï¿½.I intend on using it for long distance simplex operationï¿½..

Thank You
Very Much,

Carl Domanico N2MFW

5/21

For Sale: Dynaco ST-70/ PAS-3/ FM-3 And Fisher 90-T

Dynaco ST-70

Fully Rebuilt to stock specifications with new resistors, new film caps, new internal wireing, gold RCA jacks, binding posts and AC cord. Originally a factory wired unit. Some rust on the transformers. Shiny chrome with moderate pitting. Brown cage. Strong quad of EL-34, Dynaco branded 7199 and Mullard 5ar4. Includes copy of manual and my personal notes file (100+ pgs).

Works and Sounds great! This is truly a "plug and play" unit!

$375.00 + shipping

PAS-3

This is an original factory wired unit in very good condition. It is stock.
In good working condtion and sounds wonderfull.
Includes copy of manual and copy of my personal notes file.

$150.00 + shipping

FM-3

This is a good original and stock unit. Strong eye tube.
Wonderfull sound- makes FM enjoyable!
Includes copy of manual and copy of my personal notes file.

$140.00 + shipping

I will sell as a trio for $625.00 + shipping

Fisher 90-T

This is a tuner preamp. AM-FM with full source selection and tone controls. Unit is mono, tuner section has MPX out for stereo connection to an external MPX unit. Preamp section has main out and tape out. Tape out, bypasses the tone/ volume controls and the extranious switches for a cleaner sound. Tuner section is very sensitive in both AM and FM and is in good alignment. Tuning eye tube in good condition. Sevearl nice
Mullard and Amperex BB tubes on board. Cosmeticly clean chassis, Brass face has a few scratches. Overall VG condtion. No case.

$75.00 + shipping.

I have posted to the web some very early wireless station and equipment
photos. Some are boatanchor vintage, but most are earlier. Some are as
old as 1904. For a look see, go to
http://www.metronet.com/~nmcewen/wireless_gallery.html
More to come!

Heck, I used to run six meter AM in Fresno, California back in the late 1970's. My first six meter contact was WA6TRO back in Kansas. Now, you can't even find hardly anyone who cares about six, unless it's FM, but I'm currently looking for some SSB equipment..

2627. FS: OLD CLOCK RADIO

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-22 00:00:00 UTC
From: Rick Williams <williams@brunnet.net>
Message-ID: <6k4qig$lp2$1@phobos.brunnet.net>
Source record: 104944

Apparently there are people who collect these things. Forsale a 30 year old Longines Symphonette clock radio Model LCR 200. All knobs and parts are present. Works, but needs a clean job. Case is cracked in two places and a small chunk of the case is gone on the bottom. $13 US shipped. Cheque okay. P.S. I'd give this an 8.5 if it were a boatanchor.

Message-ID: <6k4r4h$lp2$3@phobos.brunnet.net>
Source record: 104945

I'd prefer to part with the whole box in one fell swoop, but will sell individual tubes for $3 US each plus shipping if anyone needs them for their collection. Quantities are on the left:

1 RCA JAN VT-137

14 VU111S Stamped "Made in Canada"

25 VU33 2 10E/9828 Silver coating/British Air Ministry with logo

20 VR27 2 10E/8239 Gray coating. Most intact, but chipping on some/ British Air Ministry with logo

42 VR21 2 10E/7238 Gray coating. Most intact, but chipping on some/ British Air Ministry with logo

To mail 1 tube or 20 to the US from here is about $5 US.

2639. REVIEW: SHORTWAVE RECEIVERS PAST AND PRESENT, Osterman, 1998

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-23 00:00:00 UTC
From: mc@shore.net
Message-ID: <6k7qih$7u4@northshore.shore.net>
Source record: 104763
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave

REVIEW: Shortwave Receivers Past & Present, 3rd Edition, Fred Osterman

This guide covers communications receivers from 1945 to 1997 and details information on over 770 table-top models. The 4th edition contains 120 more pages and 250 additional receivers than the second edition published last year so the author has found even more radios to include. The equipment it deals with are not ordinary table broadcast units but specialized pieces of equipment made for amateurs, short-wave listeners, military and government customers. Many of the older receivers are highly sought after by collectors, hobbyists and hams who are interested in "Boatanchors", a term of endearment for older, tube-based (and consequently heavy!) equipment.

Initially there is information on buying a used receiver, restoration and repair, a bibliography of periodicals, publications, clubs and on-line resources on the subject as well as an explanation on how to use the guide. Each manufacturer is given a chapter. A short discussion about the company, its logo, addresses and other general information follows. Each model is generally given a half-page with just about everything you'd want to know about the radio short of having the manual. Just some of the listings include features, specifications, circuit compliment (tubes and their function where applicable), accessories, comments, variants, where and when made, voltages, a neat symbol that indicates the type of frequency readout used, size, weight, etc. There is information of interest to collectors too, such as an estimate of rarity, new price and a general price range of current prices. The guide even has a section of radios that never were such as the Hallicrafters SX-112 and others!

Also included are the "dream" receivers - high-end equipment that most of us will never see - with names like Watkins-Johnson, Rohde & Schwarz, Harris, Racal, etc. Its nice to look at the pictures, enjoy the descriptions and dream.....

Shortwave Receivers Past & Present is very well illustrated and produced. The author really knows his receivers, choosing models that are of major interests to hobbyists. As an example of this, Osterman has included certain military receivers such as the Collins R-390/URR and its younger brother the R-390A/URR because they are of great interest to hobbyists. Also included are the sought-after Collins 'A' and 'S' line receivers. In addition, some rare and virtually unknown receivers such as the DAVCO DR-30 and the Mosley CM-1 are included. Many of the receivers listed are from other countries. Twenty four pages are devoted to

Eddystone which is a well-known British manufacturer. I found the price information pretty consistent with what I've seen on the Net and at some flea markets. A nice touch is that the author quoted a few of the radios' values in Japanese Yen as well! Japanese enthusiasts are well known at larger US hamfests for buying up nice clean Collins and other American-made radios.

This guide is a very complete collection of equipment from all over the world and should be of great interest to anyone interested in radio receiving equipment. It is available from the publisher.

This is as hvy duty as they get. Rated 1kw AM. Huge roller inductor and vacuum variable inside a pressurized coffin style cabinet. Remote control unit has two meters--one for L position and the other for C position. Will work as an auto remote tuner with a homebrew adapter that you would have to build. As is it is a manually operated remote antenna coupler. You supply the interconnecting cable. Currently pressurized with nitrogen and ready for installation. I picked it up over a year ago as Navy surplus but have decided not to use it. It's too big and bulky for my installation. I have the tech manual.
Will trade for HF rig such as Corsair II, loaded Omni C with rmt vfo and supply, etc,.... or possibly an HF amp.

Greetings, Lane. I asked this question about two months ago and got replies from three other people who were also wondering. Have all their notes on file. No web page, apparently. Seems to me it might be a good idea for all of us to keep in touch with each other. Wonder what good TMC stuff you have. I have a GPR-90 (case), a GPR-90X (rack), an GSB-1 sideband adapter (case), two matching speakers, four FFR-1s with tuning drawers for 200-400 kHz and 2-30 MHz, and a sideband adapter for one FFR-1. Have good manuals for all but the last unit. Cheers es 73. Harry MacLean, VE3GRO, London, Ontario

Wanted: Manuals for the following equipment
(original, in good condition, no reproductions please):

Hewlett-Packard:

8405A Vector Voltmeter
11570A Accessory Kit
3582A Spectrum Analyzer
606B Signal Generator
3497A Data Acq. Unit
6448B DC Supply
3467A Logging Multimeter
6294A DC Supply
3200B VHF Oscillator
431C Power meter
5223L Counter

Anritsu:

MEV8 Noise Loading Test Set (consists of MG431A Noise generator
and ML415A Noise Receiver).

Wandel and Goltermann:

9003 Noise Loader
RE-50 White noise receiver

Also, I am looking for the following military technical manual:

Manual Part number GTM-D-133 for the G-133F receiver (manufactured
by LTV).

Please email directly to me at kolner@leorg.ucdavis.edu

Thanks,

-Brian, K9SN, Moraga, CA

Collins ART-13.
I've inspected it and find no ham-hack modifications.
Dusty. Last depot maintenance marked as San Antonio
Air Station in 1953. A 1/4 inch hole in the back skirt
allows adjusting the calibarator without removing
the cal chassis, and this was often done in-service.
It needs a new red pilot light jewel. All knobs correct
and whole. Needs some white laquer stick. About 90% of
original finish intact. All tubes present and intact.
Tuning chart present with user entries. No cal book.
It looks like you could disassemble, clean, lubricate,
reassemble and go on the air. I have not personally
tested it, of course.

$110 Boxed and ready to ship at 80 pounds.
That's about $40 UPS between Texas and California.

Source record: 104974

I have for sale an old Vibroplex bug. From the serial number (92477) and other info on the patent plate, it is from 1923. It is in good restorable condition. The gold pin-striping is still visible. It's dirty - but the seems have a bit of oil mixed with the dirt - which has kept it rust free.Tthe plating looks excellent. The damper is missing, and the dot paddle has been replaced and is worn. Price $125.

2669. REVIEW: PERERA'S TELEGRAPH CONNECTOR'S GUIDE, W1TP, 1998

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-23 00:00:00 UTC
From: mc@shore.net
Message-ID: <6k6k2n$329@northshore.shore.net>
Source record: 104976

REVIEW: PERERA'S TELEGRAPH COLLECTOR'S GUIDE, Tom Perera, W1TP 1998

Collecting keys and other telegraphy artifacts is a popular hamfest pursuit. Tom Perera, W1TP (formerly K2DCY) has been a regular fixture at most of the hamfests and electronic flea markets for as long as I can remember which is over twenty-five years. His main (but certainly not only) interest is Telegraphy, memorabilia and knowledge. Even though I am not a serious collector I have always found his mobile museum displays interesting and educational, to say the least. Over the years Tom and I have shared our finds with the knowing smiles and happiness that you only experience when a friend finds a real treasure and lets you in on it by showing it to you.

I recently returned from the Dayton Hamvention and was very pleased to see Tom set up in the flea market. Let me just say that the best comment I heard was from another serious collector who said something to the effect that he had more stuff for sale/trade than most other collectors have in their collections.

However, the most exciting thing I found at his encampment was his new guide to the collecting hobby. It is an 80-page booklet with about 250 clear, sharp, black-and-white photographs of keys and other telegraphia that is a great resource guide to for collectors and enthusiasts of all interest levels. Tom's guide gives the reader some history of telegraphy before delving into a comprehensive section on keys and related artifacts from the various sub-sets of the discipline, namely land-line, spark and radio with special sections for military from a number of countries. Then there are the lists - many printed by the courtesy of other collectors who are particularly knowledgeable in areas of specialty such as Neal McEwen K5RW's list of "Bug" manufacturers. Then a brief instructional on adjusting telegraph keys and a short treatise on restoring keys (the main message here is NEVER use a wire brush or abrasive polish on keys as it greatly decreases their values). Also included is an extensive bibliography (Tom's an academic, you know) a short list of Web links, a quick Vibroplex dating chart and finally a price guide.

Price guides are always controversial. Tom states his list is "prices the average collector would pay". Some people don't like price guides as they think that they may be too self-serving to the ones who write them and represent inflated prices to increase the value of their holdings. However in this case I do not feel that this is the case. Tom is very active in collecting circles and sees a lot of stuff changing hands. I have heard of people buying keys for prices that are right in line with Tom's figures. You must remember that these prices are only a guide and there are many factors involved with determining a particular item's value.

Perhaps the most important of which is the amount someone is willing to pay when the owner wants to actually sell it. Because such prices and values are fluid most price guides are somewhat dated but Tom offers a downloadable price list with the guide's item number as well as the Internet Museum number of the illustration. Tom's fine on-line museum may be visited at www.w1tp.com.

I have been looking forward to seeing Tom's guide ever since he mentioned he was doing one a long time ago. I was not disappointed. The pictures are well done and the book is printed on high-quality paper stock. There is plenty of good information and resource lists that point the reader towards telegraphic knowledge and wisdom that only come with years of collecting and study. I am not a collector but the subject interests me. Tom Perera's Guide certainly gives me a much better understanding of the hobby and the artifacts associated with it.

PERERA'S TELEGRAPH COLLECTOR'S GUIDE is available from him at shows. Just look for his WORLD'S NUMBER ONE TELEGRAPH PROFESSOR sign. It may be ordered by mail from Artifax Books, PO Box 88, Maynard MA 01754 for $12.00 including postage.

For Sale:

Power transformer for that project you've been wanting to build. It is used but in excellent-appearing condition - just removed from working equipment. Core measures 4-1/2" x 3-3/4" x 2-1/4"

115/230 volt @ 50 to 400 Hz primary
730/500/0/500/730 v @ .200 A center-tapped high voltage secondary
6.3 v @ 5.5 A filament winding, 1000 working volt insulation
6.3 v @ 5.0 A filament winding, 1000 working volt insulation

It is marked "Spectra-Physics" and "4-0374 by Tranex".

I will take $20.00 plus shipping from 44134.

Can we just drop all this crap. Guns are not responsible for deaths, it is the PERSON WHO PULLS THE TRIGGER. Just about all of the guns used to commit crime were stolen/untraceable, They are not legally owned. If you feel that this is not the case you are a total IDIOT. Read the facts of the cases not what the "news media" hypes. You will find the truth, not what they want you to see.

I agree whole heartedly, but when someone defames a whole group of Hams by coming onto News Groups they know we frequent, with such foolish statements, someone has to defend the group at large, in the same area. I've already made my point and stand by it. Case closed.......

2685. Internet Elmers Wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-23 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <CeD91.1830$t4.1592779@newscene.newscene.com>
Source record: 104992
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Based on data reduction and analysis of an ongoing log of actual compound subject/geographic queries of the Amateur Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

I've concluded that there is a need for Elmers in the following three categories:

- Elmers in geographic areas that do not appear at all in the Directory

The following U.S. States/Commonwealths/Districts/Populated Territories, Canadian Provinces/Territories, and those Countries representing the top-10 countries in licensed amateur population (based on IARU statistics), do not have any Elmers at all in my Directory:

American Samoa
District of Columbia
Guam
Iowa
Montana
Nevada
New Mexico
North Dakota
Puerto Rico
South Dakota
Virgin Islands
Wyoming

Manitoba
New Brunswick
Newfoundland
Northwest Territories
Novia Scotia
Nunavut (beginning in 1999, currently part of Northwest Territories)
Prince Edward Island
Quebec
Saskatchewan
Yukon Territory

INDONESIA (listed here for completeness; considering the political situation, I don't expect to recruit many Elmers from this country in the near future)
JAPAN

THAILAND

- Elmers in specific, frequently-requested, subject/geographic category pairs that do not appear at all in the Directory (at least at the time the requests were made; they might currently appear in the Directory, based on recent updates)

The following are the most needed subject/geographic category pair Elmers that did not appear at all in the Directory, based on an arbitrary "No match" query threshold of 3 or more. They are ordered alphabetically by geographic area, then by need. The number in parentheses represents the number of requests for such an Elmer since the compound subject/geographic query was added around mid-1997.

I have a beautiful Motorola R-390A in excellent condition. Includes top
and bottom covers, plus a non-standard but fine freshly painted cabinet.
Front panel and lettering look new,and the radio was recently aligned.
Pick-up in DFW Texas area, or will deliver to Ham-Comm `98`.
$450.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

For more information and links to Your
Congressmen and Senators please visit:

I may be interested if I can find a suitable transmitter to use. My
SP600 covers six so I just need a transmitter and antenna. Was/is there
a military surplus transmitter w/vfo which could be readily used? What
power levels would be needed to really be useful? Anyone have any
ideas? BTW, there may already be some interest...seems I saw a six
meter AM calling frequency listed at the AMI web site.

For Sale:

P&H Electronics 20dB pad for use between the exciter and the
transmitting convertor. This was used at 14 MHz to attenuate the drive
from a 100 watt exciter into the P&H transmitting convertors.

Electrically excellent - cosmetically fairly good.

Asking $20.00 plus shipping from 44134.

I don't filter them, I forward them - to the white house, the secret service,
and the FBI. Eventually, they will "filter" him. I wonder if he has a shack
in the Montana wilderness?

Hi ED. I don't recall seeing you here before. I guess the Burts of the
world draw them in.
Where do you stand on the code/no-code issue?

2700. DIAL CORD CD-ROM REFERENCE!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-23 00:00:00 UTC
From: Terry Muncey <tsm@electrosys.com>
Message-ID: <6k7cab$g16$3@news.onramp.net>
Source record: 105007

Ever want to kill the guy who engineered (or mis-engineered) the dial-cord on that old radio you were trying to replace or figure out from scratch - well most of us have been there and this is why I've resurrected the entire dial-cord series that Howard Sams published after WWII. See http://www.electrosys.com/dialcord.htm

A bargain of a resource for $ 57 postpaid.

Hello,
I am looking for the spec. of RCA 8042 tubes. It is in the same package as the 6146 but was told it runs on 12.6V filament (direct heating filament not heater type) for quick start mobile transmitter. Amperex and RCA made this type. Need a detailed spec. sheet.
Thanks and best 73's to all.

BC 348R. Has good lettering, cabinet, dial etc. NO dents or extra holes in it. Has original dynamoter, and radio has not been modified. Some touch up in flat black has been done to some parts of the cabinet, but the set still looks nice. Has service logo attatched to front, and was last sericed in 1967. Looks nice enough to display, or a great candidate for restoration. Have not used this radio. $130.00 plus shipping.

2704. info needed about Audio Delay

In the continual quest for signal improvement, I recalled some years back a few hams were experimenting with audio delay devices (echo chambers set very low). Any ideas where I might find information about them?

Any Moron stupid enough to own a Mac , should get software that sucks , It
your own stupidity to even go out and buy such a machine most software
manufacturers are pulling away from Mac because they are a dying machine.
get a life and buy a real computer !!!

Just a note about problems with IBM machines . Corel does work on them !!!
there maybe bugs in it but I haven't found any yet and I use it every day
ver 5 , 6, 7, and 8.0

Before you shout FRAUD THINK ABOUT SLANDER SUITS THAT CAN ARRISE AGAINST YOU
!!!

May 23, 1998

I like to visit these monthly Flea Markets they have in the region to walk through the vendors' wares to see what was on display for sale and barganing. Essentially the items for sale are merchandise picked up from "micro estate" sales held as we all go through the "great Recycling" plan of life.
The other day, I saw an oldish looking radio set that was not too familiar. On inspection, I recognised the 'Hammarlund' name on the front panel. It was older looking than any Hammarlund I was used to seeing or pay attention to or remember at SWL and Amateur oriented stores I used to visit in the fifties and sixties. It had octal tubes and had solid construction like that found in military gear. Short time later, I got the heavy grey receiver, took it home vowing to test the tubes before turning it on. Got around to the receiver about a week later and, what the h___, plugged it in with a short wire antenna and speaker attached. It worked fine! The tubes worked out with strong values so there were no tube worries.
The set is the Hammarlund HQ-129X receiver. Think I'll get its manual and check out its alignment although the WWV is right on the dial. Maybe better to leave well enough alone.
The HQ-129X was the immediate post-war successor to the HQ-120 as I found out at a boatanchor website.
The other set I found at the same time was the Hallicrafter S-53, an interesting 8 tube set. This set had a dead front end but the power, IF and audio section was OK. Some detective work ahead. So far replaced a very weak 6C4 triode tube. The chassis has been taken out for circuit tracing work. Let's see how far I can go without a schmatic. Feels nice to regress back to an old hobby involving vacuum tubes.

2708. For Sale: Radio-telegraph key

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-24 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980524.090426.3398.1.w5jv@juno.com>
Source record: 104775

Good evening to everyone on the list,

Just received a telegraph key which I purchased from a fellow list member. Unfortunately for me, I already have one of the type. So, if anyone would like to buy it from me, it is available for what I have in it ($43) plus postage & handling from 70806 ($3) or $46 total or best offer over that if you really want to make sure you get it.

There is not much to add description wise other than what was passed on to me. The original description is below. The plating is nickel, base looks like an actual sand impression casting done to conserve brass and keep machining to a minimum.... but it is nicely done. Not easy to tell from the die casting used by Bunnell. Nice plating on base. Contacts are 1/8" radio contacts so probably was a military war effort key removed from a ship's mounting or equipment desk. I doubt it was from the 20's but I'm wrong as many times as I am right so my loss is your gain on this. First firm "yes" by tomorrow afternoon has it. Overseas shipping would require additional postage.

73, Doug

Original Seller wrote::

>bought it from says it is from the 20's.......but I have no
>idea...looks that old!! Missing One Screw on one of the Binding Posts.
>
>
>VG- Condition
>
The Key is Pretty much "OVAL" Shaped. It is 3" Long and 1 7/8" wide. The Base is about 3/16" Thick The key is Quite heavy.....Not light like many modern keys. The Contacts are Medium Sized...not the real tiny ones...but not as large as the Standard Contacts. The Key Down Bar is about 3/8" Wide..much wider than normal...and is very thick and heavy. It has a Large
Fluted Bakelite knob on it. The Bottom Contact has a "Conical" Base supporting it. The Spring is Very Heavy and Thick...and it is attached to the base by it's end only...it does not rest on the Base.......it is inserted into the base by the end of the spring.

That's about all I can tell you Doug. I don't know a lot about Keys......If

you still want the key......please let me know. Price is .....

$43.00 USA Postpaid.

2711. 1964-era transceiver (2 tubes) you can build!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-24 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <356791c3.15960710@news.mnsinc.com>
Source record: 104778
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Well folks at long last it is almost ready, and you can get a SNEAK PREVIEW this weekend if you like!

This little transceiver project is a very thorough presentation with several pages of text and graphics.

As a 13 year-old boy I was introduced to the joys of radio by various friends. Back in those days there was a cool magazine on the news stands in Britain, called Practical Wireless.

I devoured every issue that I could get my hands on, spending hours poring over the advertisements etc.

I think the June 1964 issue was the first one I ever saw, and I was fascinated by the thing! Here I present a copy of the article showing how to make a portable tube transmitter (10 watts) and regen receiver, that ises a total of TWO TUBES!

I hope some of you may actually have the joy of building this tiny station that is small enough to fit, "IN AN OVERCOAT POCKET" and yet capable of working the world on 7 Mc/s.

If anyone wants any explanations on the strange terminology or symbols used, they are welcome to e-mail me!

The money symbols refer to the OLD British money system using:

5/- to indicate five shillings
2/- indicates 2 shillings.

The magazine was abit phoney in that they gave the "blueprint" with the magazine at no charge, and it was obviously printed ONLY to accompany the magazine, and yet they printed a PRICE on the blueprint to try to make you feel that they were doing you a big favour by giving you something extra for free!!

I have some 6GW8 (ECL80) tubes here, and I may try to reproduce this little rig myself, even though I am not particularly fond of regen receivers (grin - sorry!)

Everyone please take a look and enjoy the article. I will be adding a couple more pictures and improving the layout. Most of the pictures enlarge if you click on them.

Fore Sale Philco T-9 Trans-World portable short wave radio. This is one of the first all transistor portable short wave radios. Rare and collectable. Works good but two upper bands are very weak. Has the original instruction book in the lid. Overall it is a 7 on a scale of 10. $180 plus UPS charges; FIRM.

2724. hallicrafters HT-37

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-24 00:00:00 UTC
From: AA8AW@aol.COM
Message-ID: <ceae4e0b.356827f7@aol.com>
Source record: 104791

I saw mentioned the Hallicrafters HT-37 transmitter. FYI - The HT-37 was a cheapie compared to the HT-32 model. The HT-32 looks a lot nicer and matches the SX-117 and SX-101 in looks (Black, grey and and silver). The HT-37 is the solid grey and looks a little cheaper (as it was less expensive). The HT-32 had better AM transmitting, but I forget now why, I thought it had the double phasing you guys have talked about whereas the HT-37 did not, but I really don't recall at the moment. There was an improvement and the AM guys liked the HT-32 a lot better. I remember it confused me that the HT-32 was nicer than the HT-37, as 32 is lower than 37. I am unsure which one came first? I am not saying that the HT-37 was a bad rig, in fact it seemed pretty rugged and was almost the same as the HT-32, but if you looked at the 37 and 32 next to each other, you would take the 32. So, you can pick up 37's for a lot less. I managed to get a mint HT-32A, SX-101 and (Ta-Dah!) a HT-33A amp (Mint too). Bought them all separately.
Then got rid of the HT-37's I had. By the way, they put out about 120 watts on CW. I have not yet got the 32 going on AM simply because you grow old listening to the QSO's on AM, so just CW for the last 4 years. I don't know what everyone else feels about the AM QSO's, and I understand the tradition, but it would be nice to have a net where people did not go on forever just because it is AM. I guess you have to have a little more time for AM than CW.

73, Joe

2730. Help needed to identify a receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-24 00:00:00 UTC
From: rvmj@enterprise.net
Message-ID: <35684e08.102279@news.enterprise.net>
Source record: 104797

Greetings, all.

I would be grateful if anyone could identify a receiver for me. I have owned it since circa 1957, I bought it as a "Top Band Command Receiver".

It covers 1.5 to 3.0 Mc/s, and has a plate with the following details on it:

Aircraft Radio Receiver
Type CBY-46104
Frequency 1.5 to 3.0 MC
Weight 6.0 lbs Serial 513
A unit of model ARA Aircraft Radio Equipment
Manufactured for
Navy Department - Bureau of Ships
by
Aircraft Radio Corporation
Boonton N.J.
Contract Nos 74912 Date 29 June 1940.

In addition it is stamped on the rear where the (absent) dynamotor lives with a USN logo, the number 5005, and 1.5-3 MC.

I can't find a reference to any Command Receiver of this frequency coverage.

Any info greatly received - including whether obtaining a replacement dynamotor is a possibility!

Many thanks in advance.
from
RVMJ

For sale:

E. F. JOHNSON 6n2 Thunderbolt Linear Ampl.
Untested. Price is based upon presumtion that
the iron is good.
It is complete and original.
With 2 extra new-in-can 4X150's
Face is EXCELLENT. The rest is very good.
I will NOT pack or ship, BUT, I will deliver
at no extra charge up 100 miles from Auburn, CA.
That means that I will take it to wherever the
buyer says, within that distance, which could
include someone who likes to pack and ship
120 pound Linears.
This is probably as close to "museum quality"
as one would ever find one of these. There aren't
many of them.
$900 obo.

Dynamotor Supply DM/64a=12volt in 275v/150m out & on the same chassis #42486 (Stromberg Carlson) 12volt in 680v/210m out. There are also capicators & relays on the chassis. Not really sure what it was originally used for, but it was in the collection of a local boat anchor person before he passed away, so I'm sure he had a use in mind.

Its somewhat heavy, but will feel light as a feather to someone who is trying to power up some WW2 gear with the real thing..$40.00 Bob

Jeep,

You might contact John Elwood, WW7P, 5716 North 34th Drive, Phoenix, AZ 85017.
He wrote a short article on cleaning keys for the "Vail Correspondent" some time back and specifically mentioned Signal Electric Manufacturing Company and their line of Standard Wireless Keys. There are apparently three models; R-62, R-63, and R-64. They are identical except for the contact size.

R-62 3/16"

R-63 1/4"

R-64 3/8"

He can probably provide some date information.

Rated 1 KW AM!!! 2-30 mhz (160 no problem). Picked it up last spring and it is too big and bulky for my needs. Have remote control unit. Tuner uses a huge roller coil and vac.variable. Designed to be fully auto but in order to enable the fully auto mode you need to build an adapter unit. Tech manual shows you how. Pressurized coffin style tuner assembly. Units are like brand new. Use as is as a manually operated remote tuner. You'll need to build the remote control cable.

Trade for loaded Corsair II or 850SAT.

##
Hi-Mound Automatic Bug. Model #BK-100. (Also sold as Johnson and
Skilman Models.) Made in Japan. On Page 64 and 65 of KeysII The
Emporium by Dave Ingram K4TWJ. As described in the book........

"This delight is set into a black Plastic base fitted with Molded
Metal weights and a solid hold in place rubberized bottom cushion.
Contacts and adjustments face inward inside the base, and the full
mechanism is protected by a clear plastic Dust Cover." The BK-100
Sports a single Finger Piece, has a wide dot speed adjustment Range,
and produces some pleasant "Bug Chatter" during use.

This unit is in VG++ Condition......Only thing keeping it from
Excellent is some Glue Stuck on the Left Side of the Finger piece.
Real Clean. Fully operational....and A Real Nice Bug to Use!!

PRICE...........$90.00 USA
##
Vibroplex Vibro-Keyer Electronic Keyer. Smaller sized Base Grey
Wrinkle Painted.Made in USA. Chrome Hardware with Black Fingerpieces.
Gold Coloured Metal Nametag with Red Bug on it. Serial # 47144.

EXC Condition Like New........but has a Name engraved on the Underside
of the Base.

PRICE.........$40.00 USA
##
Vibroplex J-36 US Signal Corps Military Version Automatic Bug. Made in
USA. Black Wrinkle Finish with Chrome Hardware. Works Great. Has 3 New
Rubber Feet on Bottom of Base.

VG++ Condition....But Missing Nametag. Otherwise...a Real Nice Unit!!
Real Clean.

PRICE.....$100.00 USA
##
Vibroplex Model X Bug.....Made by Horace G. Martin NEw York, USA. The
B-3 Nametag says.....(The Vibroplex Trade Mark. Pat. June 30.03.
Aug.9.04 Jan.22.07 Others Pending Horace G. Martin New York USA)
Serial # 11152. Early 1911-1912 Model Model.
Base has been repainted Grey.....with " Gold Japaned Lines around the
outside". Looks like this was painted a long time ago.......
This unit has the Square pendulem...and Square weight. Unit is
complete except the plastic Finger pieces are missing. Has 3 New
rubber feet on Bottom.

Overall condition of this Bug is VG- ....Works fine.

This is a Very Early....and hard to find Vibroplex Bug.......I am open
to offers in USA Dollars for this Bug. Please email me with your Cash
offer only on this item.

##
German WWII HandMic. This Mic Looks like it was probably used in a
German Tank!!! Nice little Palm sized Black Bakelite and Metal
Handmic. With Neat Styling. Has a Red Push to talk Button on the front
that has the word ""DRUCKEN" engraved into it. Over the front Grill
area of the Mic is Engraved in Red ...the following words... "Fiend
hort Mit!" ....which I am told means... "The Ememy is Listening!"..or
similar.
This is a Great Piece of WWII Radio History....and I would think there
is not a lot of these in North America!! I have never seen another one
of these before..Have You????

Has a Cloth Covered Cord.

VG+ Condition......

PRICE.....$150.00 USA
##

End of Part #2.

> It says NOTHING about INDIVIDUALS, N O T H I N G .

Neither do the first, third, fourth. . .amendments.

In the first amendment, the right of the "people" to peacabley assemble applies to individuals and limits the power of any level of government. If the "people" are a collective such as the state, no one can assemble unless they are members of the national guard or other state sanctioned function.

Also, in the fourth amendment, the right of the "people" to be secure from unreasonable searches and seizures is an assertion of individual rights and a limit of all levels of government. Same for the other amendments comprising the bill of rights.

In the second amendment, the right of the "people" to keep and bear arms are an exception???? a collective right??? Think!

A state cannot have a RIGHT. States only have AUTHORITY granted to them by consent of the PEOPLE who have RIGHTs.

Read the federalist papers. They explain it all.

Have one that has kaput meter, missing knob, with DC supply and copy
of manual & schematics. Bought for spare parts for my Gonset Twins,
but don't need it anymore. Sold as is, $60 plus UPS from 02173 or
trade for GDO (Millen, Mil, or ??).

these are original sams for the following table model and portable radios
a few receivers and car radios from the late 40's to late 50's showing
schematics,parts list,dial cord stringing and alignment notes.

$2.00 each gets them in the mail
the first two are $2 then $1 3 for $5 4 for $6 and so on
last call for these,they will be thrown away on 7/1

2766. FS: Modified Johnson Viking Challenger

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-25 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6kcjo0qgc1@nnrp1.dejanews.com>
Source record: 104665

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual. Price reduction--$125 or best reasonable
offer plus shipping.

Some nice folks advised me that this unit does not have the
original Johnson stock meter setup, but was upgraded by the owner
at one time from examining the meters in the photo.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider $125 or best reasonable offer plus shipping.

Thanks.

Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA.,
U.S.A. Model Number 90651. Price reduction to $175 or best
reasonable offer.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit cannot be told from new and is in amazing condition.
It even has the original box with it. One lucky person
apparently sold a unit for $325 in this super condition and I
have seen them for $65 as well in decent condition.

Price reduction. Understandably, was not moving at higher price
so reduced price to $175 or B.R.O. plus shipping due to the
wonderful condition of this unit.

Thanks.

2768. FS: Two Very Nice Hammerlunds

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-25 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6kckbr$r6r$1@nnrp1.dejanews.com>
Source record: 104667

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept and collector quality. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x:

http://www.geocities.com/Athens/Forum/3417/HQ-140-1.JPG

Purchased off the gentleman directly who owned it.
He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $250 or b/o plus shipping costs. Will consider a good condition & complete Hickok USN or USAF AN/118B cardmatic for a swap for the 140-X.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-1.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-2.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only things I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced and the fine vernier adjustment will need a dial string (a.k.a. some folks use dental floss). Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself.

HQ-170 & Matching speaker $400 or b/o plus shipping. I realize
both prices are on the high side, but these unit's physical
condition are really nice.

Thanks.

Following are from my personal library, and in "good" condition considering their age. Price is $10 per+ postage. [OBO]

DC & AC Manual, Bedell, 1912, ...heavy on the mathematics

Elementary Math applied to Wireless Telegraphy, Willis, 1917

Electrical Engineering, Christie, 1913

Electronic Engineering, Vol III, published by Electronics Magazine with many pix

Everybody"s Radio Manual, 1942, pub. by Popular Science Magazine...as a kid, I loved this book!

High Frequency Alternating Current, 1931,
McIlwain & Brainerd, ...lots of math

Practical Wireless Telegraphy, Bucher, 1917, Lots of Pictures & Diagrams

Prin. of Radio Communication, Morecraft,
1927, ...some math and some pictures

Prin. of Radio Telegraphy, Jansky, 1919,
..some good old pictures

Radio Telegraphy & Telephony, Robison,
1927, ...lots of basic diagrams & circuits

Radio Telephony for Amateurs, Ballantine,
1922, ...antennas, pictures, diagrams

Wireless Experimenters Manual, Bucher, 1920, ...in my opinion, a good book, pix.

Wireless Telegraphy (2 copies), Stanley,
1914 ed & 1917 ed, ...no math, good diag.

Vacuum Tubes.... , Bucher, 1918, ...lots of diagrams, and some pictures

ALSO, some paperback oldies in sep. list.

Sold mine (tested) a couple years back for $ 800. If yours IS working it IS worth $ 900 ! You can drive this amp with as little as 3-5 watts to approx.. 700 watts out on either 6 or 2 meters. the 4cx250 tubes are cheap to replace to boot ! There were VERY FEW of these amps made. I'd be surprised if you have not sold it already. Don't be put off by those who don't know the true value of these amps. BTW the reason I sold mine was to buy a Henry/Tempo 6n2. Double the power but you really need 75-100w to drive it and 8874's aren't a cheap date ! For Leo the price policeman's info these are going for $ 1500+ and that's more than they sold for new. 73, Brian K3USC

Once again the media (and other foolish types) blame an object for a crime rather than the PERSON who committed it. If the courts in this country would lock up (permanently) or execute all violent criminals the FIRST time they commit a violent crime then maybe teenagers these days would see that crime doesn't pay. And maybe parents these days should expect some responsibility from their children at a younger age instead of letting them run around like wild animals. By the time I was 13 I knew darn well what was right and what was wrong and that my parents would hold me fully responsible for my actions. Today many kids have nothing expected from them until they meet the real world and by then it is too late.

Possibly I did not say it clear enough.
I have not fired this up.
I was told it works fine.
I WILL MONEY BACK GUARANTEE IT TO WORK.
It comes with two new finals still in the can.
I doubt there is a better looking one in
existence.

I am also reposting this as I accidentally ran accross
some comments regarding my price of "$900 obo".
Of course, none of these comments were sent to me.
I do understand that some very pompus, arrogant people set
themselves up to be price police. I have become used to that.
However, what kind of price police complain about prices
that are "obo". Such a person must be more than pompus and
arrogant, they must also be careless readers or do not understand
what "obo" means. I suppose some people get totally consumed
by being price police, and all they see are prices to attack.
Does this mean they need to get a life?

According to the article "Command Set Receivers---" from the Jan 1967 CQ magazine, you have one of the rarer Command sets. There were no Army production and less than 50,000 of the marine frequency band 1.5-3mc sets made. Compare to the 200,000 + sets made in each of the 3-6mc and 6-9.1mc version.IF is 705kc. Standard command set dynomotor should work. Cheers, Gene

As a "newbie" on this newsgroup, may I ask that anyone having an item or items for sale, please put the asking price in the ad. It causes a lot of trouble when someone in Swampwater, Florida has a XK-22 Tri-Band Widget for sale but lists no price. We then have to E-mail a request, then wait for an answer, only to find out the item is over-priced or looks like it lost a wrestling match with Godzilla.
Thanks

2790. Re: The HT-37 versus other rigs of the time

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-25 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19980525.082828.3358.10.w5jv@juno.com>
Source record: 104833

I beg to differ with remarks being made on the HT-37 particularly with regards any new comers to the BA hobby who may be reading.

The Hallicrafters HT-37 did sport a scaled down control panel but was no less transmitter than the more costly HT-32 and was often preferred over it. Design wise it came from the last HT-32 circuit called the HT-32B and so had all the improvements ever made to the HT-32 series and probably then some. The HT-37 sideband audio was also the finest audio to ever hit the bands for SSB bar none, its balanced modulator and phasing circuitry was more stable, and the VFO stability was second to none. More amateurs purchased the HT-37 for its solid performance (including W1AW and Eimac) and its broadcast-like audio quality than any other transmitter of the time including the HT-32, Viking, Hammarlund, Heath, or National rigs. Flaw-less cw with a punch and solid SSB make it a winning choice even today. If your HT-37 is not thrilling you, pay someone competent to go through it.

The receivers used with the HT-37 during its production days were many including the matching SX-111 which remains a fine amateur receiver. During the BA years, amateurs believed the receiver should take the bulk of their investment and so it was not uncommon to see the SX-101A, the SX-115, a 51J4, 75A4 or even an HQ-170 or HQ-180. Matching equipment as collectors do today was not in vogue during those years and if I remember right, only the S-line owners kept to one style.

If anyone is beginning a BA station and wonders what transmitter to look for, I can highly recommend the HT-37. If money is no object, buy yourself a 32S3C, 30S1 and don't look back. But if you have better things to spend your on such as retirement savings and the kids, then look for something like the HT-37.

73, Doug

I was talking to a couple running a booth at Dayton. They are
from Oregon and sell bags and other goods (like holsters) at
hamfests and gun shows. They were so used to west coast hams
that are very liberal and very anti gun.

They were very surprised that midwest hams are conservative and
usually carry guns. I would guess that the third of the folks
at Dayton had a weapon on them. My guess is that different types
of folks get into amateur radio depending on the area. Midwest
liberals just are not interested in technology.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

FS: Rockwell/Collins KWM-380 in pristine condition, mid-serial number.

This unit is like new, factory condition, with only one minor paint scratch
on the right side of the case. Front panel and rest of the radio is like
new, no dings, scratches or rubmarks . All printed text and marks are
clear, no "erase-effects" from cleaning solvents or finger rubbing.
Also internally the radio is pristine, no rust, oxides or other blemishes.
Radio is a "non-smoker".

Installed options:

- Kiron memory board version M3-A (also called "red-dot" version)
- 1.7 kHz narrow-sideband filter, Collins P/N 622-2441-001
- 360 Hz CW filter, Collins P/N 642-2439-001
- 6.0 kHz AM xtal filter , Collins P/N 642-2442-001
- Keyboard control interface, Collins P/N 641-7150-001

Additional accesories:

- Desk-top microphone SM-280, Collins P/N 020-0261-010
- Pipo keyboard (boxed incl cable) for direct-entry of frequency and memory
channel
- Collins service manual, original version, not a copy
- Collins owner's manual, original
- Kiron memory board manual

Service bulletins (manuals & parts):

-Service Bulletin #15
-Service bullentin #12
-Service bullentin #18
-Service Information Letter 1-84
-Service Information Letter 2-84
- 913-5019-560

The SB's and Information letters are not installed as I always wanted to
keep the radio in factory condition. The KWM-380 works fine without them
anyway.

Price: $3200.- plus shipping.

Source record: 104846

Would someone who has an HQ170-A manual mind terribly giving me the pin-out of the octal plug on the rear? I recently picked this rig up and am waiting for a manual. I am mainly looking for the muting pins on this jack so that I can use it in the meantime without having to switch it manually.

I understand the HQ-170 does NOT have this octal socket as the A model does.

Any help will be appreciated.

Doug,

I have owned and operated the HT-37 with both the matching SX-111 and the
SX-101A. I have always loved the HT-37, but I lean towards the SX-101A.
These are fine radios! I look forward to having a set again, and do miss

them.

Cars deaths are accidental. I don't remember hearing of a kid steering a car into a crowd of students. You have no point. Shooting someone with intent to kill is not an accident. Kids grow up with a fasination of guns. TV, the news, and gun lovin' parents are likely at fault. The NRA say's that education is the key. Gosh I think these kids already know how to shoot.

Enough said, our society has no real use for guns regardless what you say. They kill, thats what they were made to do and thats what they're being used for.

is too big and bulky for my needs. Have remote control unit. Tuner uses a
huge roller coil and vac.variable. Designed to be fully auto but in order to
enable the fully auto mode you need to build an adapter unit. Tech manual
shows you how. Pressurized coffin style tuner assembly. Units are like brand
new. Use as is as a manually operated remote tuner. You'll need to build the
remote control cable.

Trade for loaded Corsair II or 850SAT.

The R-series of keys were made by Signal Electric, largely unchanged
from 1915 to aprox. 1950. S.E. made many, many of these keys. They are
well made and make a fine addtition to the shack. For more information
on old key and bugs, the makers and how to date them, etc. see the web
page below.

Mike - what can you tell us about the TA-12?

I saw one at a hamfest yesterday. A CB'er had it on his table with no price on it. When I asked him what he wanted for it, he replied that he would not sell it because he did not know what it was worth. I said I would make an offer then. No, he would not sell, because he needed to find out the value, and he said that he WILL find out (he he!) What a loser! I walk off in disgust at that point (but didn't show it.) Why anyone acts like that amazes me!

I was just curious, what type tubes and freq. coverage it has if you know anything about it. Couldn't be more than about 50-100 watts tops I would guess by the size. To be fair, his TA-12 was very clean looking.

I'll second Kevin's idea. Even though I can't believe that this type of
tragedy would happen, I wouldn't wish it on anybody...not even Butt...I
mean Burt. My best friend was shot and killed in a drive-by shooting two
years ago. I will NEVER forget the moment when I was told what had
happened. Maybe this isn't the right place to talk about this, but maybe
Butt...I mean Burt, should get a life, and realize that this COULD actually
happen to him. What would he say then?? Would he still ridicule the
world??? I'm not saying I'd want it to happen to him, but maybe he needs
to clean the pre-mordial ooze out of his eyes and his one brain cell and
take a look @ the world.

Maybe he should disassemble it and sell it to YOU for $450. Or maybe you should get in your time machine and fly back to the 60's so you can buy it NEW, UNASSEMBLED,UNTESTED for $450 and throw it in the front of your $1200 VW "Bug" which now can't be worth more than $3 or $4 dollars.....Of course you were really seriously considering purchasing this amp, WEREN'T you????

I should list my Tempo 6N2 for $250.....+ $1000 shipping just to stir up the price police....

Gene if lived near you I would drive 500 miles and take that 6N2 off
your hands. I could use a second one here and dedicate it to 6 metres.

I have been offered as much a s$1200 for mine and it has been modified
with a new power transformer and solid state rectifiers and it is
definitely not museum quality. It does work like a charm and for the
past 18 years I have not done a thing to it except dust it out a few
times and oil the blower motor. And yes it does run 300 hours straight
during the VHF contests with no problems.

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise

full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

I have one. It was not all that expensive $30(?) but I also
found it to be next to useless. It had some alignment data
and a few other odds and ends but it doesn't hold a candle
to the service manual for my FT-990, which is > 200 pages
while the IC-706 is less than 50 and doesn't even include
a complete schematic as I remember, just a block diagram.

Source record: 104714

Picked up a Heathkit 104A tranceiver at Dayton for a pretty decent
price also got the speaker/PS and the external VFO. Needs a bit of work,
so I thought I might fix it up and donate
it to some club or the handi-hams etc.

Any info, hints, mods for the radio would be welcome.

Picked up the manuals from K7FG Vintage Manuals (http://www.k7fg.com)
payed almost as much for the manuals as I did the radio. But I can
highly recommend K7FG, extensive collection, reasonable prices, GREAT
service.

2848. FS: Lot of 40 tube sockets, clamps

I am cleaning up the basement and found a bag containing 40 assorted tube sockets, mostly octals and 18 stainless steel tube clamp-downs. I really don't need these and so I'll sell them for $20.00 (or best offer) plus UPS/Postage costs.

If interested please reply by e-mail.

I am also interested in mods for the SB-104A. In particular, it bothers
me that the switch over from receive to transmit makes a big pop in the
speaker. I have solved part of this problem on SSB with a mosfet switch, but
not completely eliminated it on CW where it really bothers me. Any ideas
would be welcome.

Also, my noise blanker seems useless. I suspect, based on the articles
below, that it should work on sharp noise at least.

There were a few QST and Ham Radio articles on the SB-104. The ones I
have looked at include:
QST January 77 (NB article)
QST August 77 "
QST April 79 (p 47)
Ham Radio April 81 (general improvements)
QST March 82 (general improvements)

I'd like to see some more input to this thread. The SB-104A is a transceiver
that should be fairly easy to improve on. There is room to get in and work
on it and besides that, they go for a very good price. I got mine for $160
shipped with PS and speaker and it is very clean!

73,

Rob, KL7NA/W7

Wrong. When the police decided to enforce them rigorously, violent
incidents in the enforcement area decreased.

>Read the federalist papers. They explain it all.

Our "RIGHTS" come from God and given by him to "The People" in the USA
who in turn "loan" to our government what is needed to manage our
nation. In European and Socialist countries they believe that the
"rights" (power) comes from God and go to the King (or government) who
then loans those rights to the people (their subjects). This concept
is what makes the USA so unique.

They sought out the people most likely to commit homicides
with a gun, and those people were NOT ordinary gun owners. They
were gang bangers, people who brawled while drunk, and people
who harrassed strangers on the streets.

Sorry, wrong answer. Mayor Guliani took a page from Boston's book,
drastically increased the numbers of police on the street, and began
strictly enforcing ALL laws, including "quality of life" laws such as
jaywalking. There was no special attention or enforcement for firearms
laws any more than other laws. Strangely enough, more police better
enforcing all the laws led to lower crime.

Tell me, oracle, why are you sending this to all these radio groups?

2856. Difference between FTdx560 & FTdx570?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-26 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEtKxA5.73H@netcom.com>
Source record: 104723

I picked up a as-is FTdx560 at Dayton. I've gotten it running except for no operation on 15M (the xtal is dead) and no CW/Tune carrier out (still don't know why)...

Anyway, I ordered a replacement manual from Yaesu and received the manual for FTdx570, not 560. As far as I can tell, the 570 was basically a 560 with a retrofit noise blanker circuit.

Is anyone familiar with these rigs to let me know if there are any other differences?

The rcvr is a mackay Radio "marine receiver" model 3010-B. serial number is M0038. Covers .07 to 30 mhz. Sort of like an SP-600/R-390A type rcvr but designed with SSB as an afterthought--late 50's vintage????

No manual. Need one. Need ANY info on this that you may have. This rig is built like the USS New Jersey. For a non-SSB rig the BFO works absolutely outstanding for rcving SSB audio. This is a very cool rcvr.

Someone out there must know the history or SOMETHING about this rcvr.

About the same size as a 75A2/R-390.

Help!!! Need info!!!

Wrong. The program was born in an analysis of violent crime. The drastic
action necessary to stop the observed crime was covered by what appears to
be enforcement of quality of life laws because it could be, and is, seen
by some as harassment.

: Tell me, oracle, why are you sending this to all these radio groups?

I have a Colllins R388 excess to my needs. The radio looks good and works
well. I have been using it daily for over a year. It has the meter handles and top and bottom covers. It has two minor flaws, the 500 kcs xtal failed and was replaced with a non original and the limiter is not working(I didnt care so I never looked why). It is now in a properly fitting Bud cabinet but it is not the
original cabinet. I will sell it with or without the cabinet and will include a copy of the manual. Make a fair offer or interesting trade. Thanks George

Hi David:
The 570 was the JA "Extra" class rig. It wasn't sold in the US. It's pretty much the same as the 560, certainly enough for you to debug.
GL, 73, Ted

I would have bee interested but the prices are... might we say.. a bit
steep. Also, I'm curious as to how "they" listened to a ballgame on a
ham-band only receiver??

I hope you were able to get the set of extender boards with the radio.
The rig is next to impossible to align without them. I also bought
one of these radios on the used market, and had to order the extender cards
from Heathkit. (Boy, that was a long time ago!)

As I was still in highschool, the radio was a great learning experience
in troubleshooting!

Problems:

One problem I had was with the power supply. It had a bad habit of blowing
the bridge rectifier if the radio wasn't used for a long period of time.

The big filter caps would become fully discharged, and the sudden inrush at
turn-on would blow the bridge. I blew 3 rectifiers that way. If the rig was
used at least once a week there wasn't any problem. Every time I had problems,
the radio had sat unused for a month or more.

The VFO in my radio drifted badly for about the first 30 minutes (>1Khz) After
that it stayed pretty solid (<100Hz/hour).

I also had problems with the freq counter board due to poor solder connections.

The majority of the problems were due to those really bad board connectors
that link all of the circuit boards through the chassis backplane.
They have a bad tendency to work loose, so intermittent problems were always
cropping up.

When the radio was working, I enjoyed using it, and always received good signal
reports. It also made a really top notch QRP rig, as you could push a button

and run 1 watt out.

I learned more about radio and electronics while using/fixing that radio than any other rig I have owned since then. A true tinkerers radio!

Have fun!

Ya know, what amazes me most about this is that there are 103 messages in this thread and I don't think ANY of them have to do with rec.amateur.whatever in the least. Why not take this whole discussion over to another news group so they can be bombarded by this drivel. This thread is just like every one that talks about code vs no-code. Everybody has opinions but, at least they are related to the group topic.

GIVE IT A REST!!!

That or someone please write a small program so that my server doesn't have to waste time sorting thru items like this. While you're at it, how about being able to filter out certain users that start threads like this... They know who they are and I am NOT pointing this at the originator of this particular part of the thread... I've just had ENOUGH!!

If we spent this much effort in writing to senators and congressmen, maybe we wouldn't be losing the 440mhz frequencies to outside interests...

There, that's all I have to say about this subject. Sorry to take up your time...

Message-ID: <MPG.fd53ba8cd3cabd29896c5@news.infoave.net>
Source record: 104750

Here's your chance to own a piece of Collins history! I have a Collins TCS-12 Navy set (transmitter and receiver) that I need to have removed from my shack. It just takes up more room than I have to spare. I've gone through it with a fine-tooth comb, and the receiver is in great working order. It is speckled on the front like something got spilled on it sometime in the past, but the control labelling is not damaged. I rate it a 7 1/2 or 8 out of 10. The transmitter looks as-new, I rate it as a strong 8 1/2 or 9. Of course it has some age dings. Anything this old will. The inside almost sparkles! A box of spare tubes, two power supplies (small and large) remote control box, and (rare?) hand mike are included. One cable is new, I removed the inventory tag myself. The other cable is in good condition. Transmitter and receiver both have shock mounts. Noise blanker has been installed. I have not had the transmitter on the air (tubes still in the boxes I got them in).

I have the complete original military shop manual and a copy, and instructions on conversion to 50 ohm coax.

I had a set like this when I was a teenager, and couldn't resist it when this one came available. I drove from South Carolina to Maryland to pick it up! It sure is nice, but just doesn't fit into my miniscule shack. So- Best offer over $225 takes this one home. Pickup only, unless you're prepared to pay for professional packing/shipping services. Web Williams in Myrtle Beach, SC

Source record: 104754

This set is in perfect working condition, and includes the Kenwood external speaker. I have the original boxes and manuals. Although the cabinets are clean, some lettering has been worn off the front of both units, but can easily be replaced with rub-on lettering. The receiver is missing one of the lock-down buttons on the hinged lid. I've only owned them for a couple of months, but just found something else I want more (Kenwood TS-940). Will sell for $325 for the set. Will include non-amplified D-104 for $25 more, or a Kenwood MC-50 for $60 more.

Will consider a trade of a Yaesu equivalent mike for the MC-50 that will go with my recently acquired Yaesu FT-101ZD (will not separate mic. from the Twins unless they sell without it.)

No, I will not make copies of the manuals, but I will forward your request to the next owner.

Double-box packaging is included in the sale price, however, shipping is not.

ZIP CODE: 29577
WEIGHT: about 50 pounds, three boxes.

Look up your shipping costs at http://www.ups.com

They do include schematic, and everything else you'd need to service a 706.
Actually, service manuals we sell are the same manuals we at Icom use to
service radios. Where did you get yours? Was it used?

Adnan, Icom America Service

TA-12-B's were popular, cheap surplus in the early 50's, and one of the few ready-to-rock-n-roll xmtrs that came with a cabinet (though many were rackmount as well). Been awhile - think abt 40 watts input - more info in Surplus Conversion Manual #2 if I recall. Not heavy. Maybe $50 today?

No, it was much nicer. The Heath was a piece of shit we had fun with because we couldn't afford anything better.

Other little rigs that had 6M AM (together w/other bands) that were popular around my way were the HT-40 & the M-Elmac AF-68 (both 80-6).

>locate a replacement?

This does not mean it is necessarily an M series. The same xtal was used from the beginning of production (i.e., prior the M designation) right through the M's. They're electronically (about) identical, but your rcvr could be earlier. Good luck finding the National xtal - some kid probably pulled it out to play with. The M's had 6v tubes; earlier sets had 2.5 v., round IF's, white S-meter with scale only to 5, and don't believe all you've read about ivory meter switches in the first year of production courtesy of the official-sounding AWA accounts. You might have to fudge the xtal - orig is in a round chrome can w/Nat'l logo on top.

2896. FS: Drake Manuals on CD ROM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-27 00:00:00 UTC
From: HAManuals <dturini@aa.net>
Message-ID: <01bd8928$714534e0$010ab488@matilda>
Source record: 104618
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

How would you like to have manuals, schematics, modifications and references for Drake radios available at your fingertips for viewing any time you have a question?

HAManuals is pleased to announce the availability of the first in a series of reference CDs for the radio collector and restorer. With the permission of R.L. Drake and other equipment manufacturers we are able to offer a very complete library of equipment, service and accessory manuals on CD for Drake radios.

HAManuals Series 1, the R.L. Drake Company, is a two CD set that contains:

* manuals for Drake radios from the 1-A to the R8, including many commercial models
* service manuals for the R7, TR7, R8 and numerous commercial radios
* modification and historical information from Sherwood, Sartori, Fox Tango and others
* manuals for Drake addons and accessories, including DX Engineering Speech Processors and E-TEK Frequency Readouts
* the new update to Wayne Montague's Drakemod 6 - Version 6A
* manuals for the TV-7 and TV-10 tube testers including updates to the latest tube reference data
* a bibliography of Drake related articles
* a complete listing of all Drake amateur and commercial radios
* screen saver images of Drake manual covers
* and much more!

These CDs are viewable on any computer that supports Adobe Acrobat Reader, available free of charge from Adobe at www.adobe.com. You can view this CD on a MAC, PC, Unix, Linux, OS/2 and other computers.

Purchasing these manuals individually would cost you over $1,000 for the complete set. Now, for less than $80 you can own a reference library of Drake material, including many hard to find manuals and schematics.

HAManuals Series 1 - R.L. Drake Company made it's debut at the Dayton Hamvention to an enthusiastic crowd.

Following is a list of the Drake manuals on the HAManuals Series 1 CDROM. In addition to these manuals, there are numerous modifications, data sheets, a bibliography and the new update to Drakemod 6.

Ham License plates for sale

All are Ohio plates, with no year listed (Ohio has not put the actual year on
the plates for some time), except the last one.

Several different plates are available, as follows:

W8EK - Blue lettering - good shape $ 20

W8EK - Red lettering - not quite as good condition as the one above $ 18

N8AJU - Blue lettering - looks almost new $ 15

WA8ETX - Red lettering - slight rust at bottom -
1965 year on the plate $ 15

Prices do not include shipping from NE Ohio.

Thanks.

Message-ID: <1998052705100400.BAA22468@ladder01.news.aol.com>
Source record: 104621

I still need to make room so I can set up my shack !
Gear available:

NC300 /spkr / VHFconverter cabinet with all 3 xtal converters 500
Viking II EX operator, chassis very nice, needs some cosmetic TLC 125
Viking II working backup for above but needs much cosmetic work 100
SB303 Looks & works great friction wheel on pointer a little loose 125
Eico 723 Looks & works well NO vfo though
65
HQ-200 Looks & works great
175
SB-10 SSB converter Looks nice but needs VOX work 35
SB-10 Converter is intact except knobs missing, case painted 25
HT37/ SX111/ R48/ HA1 Very nice looking station Excellent operation 400
DX-100B Very Fine looking Excellent operator !
300
Speed-X straight key in box with original "learn CW booklet
75
Turner 211 mic is in Excellent condition (I never use the word "mint") 175
NC2-40D operational, but needs cosmetic restoration
125

If anything is of interest, drop an email. I don't want to split up the ensembles, but could be persuaded ! I don't want to ship anything heavy, but will probably make Teaneck NJ on the 6th, and Dunellen, NJ on the 20th. I'm in Cape May Co. NJ for pickup and have test gear to confirm proper operation ! Just moved to this house and don't have the shack set up yet, or antennae strung !
Best wishes !

They were made from the fifties up to the late '60's.
If I remember correctly, your receiver covers 2MHz per band with a
cloth tape dial. Each half of the tape covers one MHz and each half
has a differant color.

They were sold almost exclusively to Merchant shipping companies,
rack mounted in a console located in the radio room. Some may have
been furnished with cabinets and used at coastal marine stations.
At the time, SSB operation was rare and CW operation was most
important - thus no product detector.

They were fairly good receivers but would suffer from front end
overload if the antenna impedance wasn't matched. Also, the first
RF amp tube has a tendancy to short easily in the presence of
high RF overload - from xmtr keying.

By the 1970's they were replaced with the MacKay 3020 series
receivers - all solid state, synthesized units.

You MIGHT be able to get a manual from:
MacKay Communications, Inc.
Raleigh, N.C

Not really, they are extremely ambiguous, a point being well proved by the tenacity of this thread. What we well-patriotized Americans fail to realise is that most of our Founding Fathers were of exactly the same sort which go for (higher) public office today...
Self-serving and VERY power-hungry. It was not in their best interest to get real specific. After all, the Bill of Rights etc. were actually the winners of

a popularity contest. The result..... Anyone can quote the documents and think he/she is justified, no matter how divergent the opinions.

Source record: 104631

hello, I have a a Henry Radio 3k premier "X" amp for sale. uses a single 3cx1200a7. Not a scratch on it. checked out by Henry Electronics12/06/96 and used 3x after getting it back, and since then its been covered up and in storage. 10-160 mtrs, never has been on 10,15,40, 80 or 160 mtrs. I used it on 20 mtrs only as I ran amps on every band. This monster has the 5K model power supply.

I have not changed the "taps" to access the higher voltage, this is a "easy" change I hear, and then this amp really smokes... but as it stands its "HOT"...

original manual included.

best offer over.....$2250.00

2910. fs: HENRY Radio 3k premeir "x"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-27 00:00:00 UTC
From: CVNQ57A@prodigy.com
Message-ID: <6kha71$j56$1@newssvr04-int.news.prodigy.com>
Source record: 104632

hello, I have a a Henry Radio 3k premier "X" amp for sale. uses a single 3cx1200a7. Not a scratch on it. checked out by Henry Electronics12/06/96 and used 3x after getting it back, and since then its been covered up and in storage. 10-160 mtrs, never has been on 10,15,40, 80 or 160 mtrs. I used it on 20 mtrs only as I ran amps on every band. This monster has the 5K model power supply.

I have not changed the "taps" to access the higher voltage, this is a "easy" change I hear, and then this amp really smokes... but as it stands its "HOT"...

original manual included.

2922. fs-Drakes R-4A & T-4X $200-

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-27 00:00:00 UTC
From: rlucch2098@aol.com
Message-ID: <1998052721502400.RAA29173@ladder01.news.aol.com>
Source record: 104644

Hi Gang;
I have for sale:
Drake twins R-4A and T-4X, small Homebrew supply, both manuals.
Rcvr plays but could use a cleaning of switchs. Top of cover, at the rear is pushed in a bit, some scratchs and some minor rust.
Transmitter is complete but untested. These are from a SK who was the original owner and was quite technical so he made some modes that have been documented in the back of the manuals. All knobs original, exc. front panels.
A good starter rig to finish up and put on the air.
Oh, the receiver has all 10 extra xtal positions filled up, they go with the recvr, of course!
Price is very resonable at $200 plus some help with shipping expense!

Hi Guys:
For SALE:

Heathkit GP-11 Vibrator power supply, no papers, untested, cables are there, very clean.....$20 ppd!

Johnson 6N2 VFO clean, untested!.....$50 ppd!

S-38D Hallicrafters rcvr, few rust spots on top, a few scratchs, has bottom and back panels, original knobs, the last engineer(hi) that owned it put a 1/2" hole in the TOP, Rear, right corner, why? plays but cud use switch cleansing, other wise untested.
Front panel is Clean, no worn lettering or jazzed up frequency panel, strings ok.
no manual, Price is $30 plus a little for the shipping!

Dow-Key Relay, 110vac, no external contacts, working, $23ppd!

Knight-kit P-2 SWR meter, w/remote coupler, untested, front panel is exc. otherwise the exterior has some chips and dis-coloration. Price $17 ppd!

Source record: 104647
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

You can't even build a remote antenna coupler more rugged than this. HUGE roller inductor and vac. variable. I have the remote control box and the tech manual. Picked it up over a yr ago but have decided that this is too big and heavy for my needs at this time (okay my wife wants me to get rid of some of the "stuff that hasn't been moved in years").

Rated at 1 kilowatt AM. Sell outright for $1K or trade for a Corsair II or 751A or 850SAT.

Shipping is possible but it will cost a LOT...this thing is HEAVY. Buyer covers shipping charges from 92139 San Diego

Maybe. Maybe not. That's not the point. The rate of violent
incidents decreased when they got the guns off the street.
According to the gun cult that shouldn't have happened because
"people kill people." Merely removing the guns and leaving the
violent individual would have had no effect on violence.

Hi Ryan,

I have a couple of those old Swans with manuals so can maybe help you,
or maybe do a photo-copy of the whole manual, or just the schematic, as
you wish.

There are two Jones plugs, One 15 pin TO the supply, or the smaller
Jones plug FROM the supply to rig.. Maybe I can just tell you which pin
goes where, if thats all you need. I think you are also using a seperate
lead and plug if you have the
14x or 14c "flip-flop" black box for 12v
attached to the supply.

Let me know what you need.

73,
Bob

There is no doubt that he would have killed them any way this NICE
LITTLE BOY was found to have at least 3 bombs that were made out of
common household items that are in almost every house. But we can
eliminate this problem by banning or at least registering and having a
waiting period on these every day items or maybe ban ar register the
knowledge. What do you think? Ban or register every chemistry book and

teacher in this country and make sure we include an import ban on all common household material that could be combined in some manner to create a bomb. How does this sound?

What a silly rant, buttressed by the PC (politically correct) Ziff-Davis marketing machine.

If you are going to use a Mac, why not make asute choices regarding what applications function well on it? Many do the WP job emminently on a Mac.

I've been using WPWIN 6.0 & 6.1 for a long time in pers & biz, done all manner of DTP with it, selling several millions in R/E with its ease of producing excellent flyers & brochures beyond the far more costly R/E software. It is a powerhouse product that has more OPERABLE features than anyone can learn in four years (or needs). Support has always been shitty - and it is everywhere unless it's at $24.99 per call - and Micro$loth is surely no better; even their website knowledge base is inferior to their old BBS.

The only beef I've had with WP it it's gargantuan size and resource-hogging - but look at MS Word, a big dog if there ever was one, woth far less to offer (I run it as well - as little as possible).

You'd think someone into the hands-on & tech know-how to mess with BA's would be away from the dumbed-down Mac & Windoze OS's, and into unix, with which you actually control your own box (and have to know something).

Boy, this submitter REALLY helped me fix boatanchors, yes?

From: EC Therapy <docshok@sunlink.net>
Message-ID: <356E183E.29787300@sunlink.net>
Source record: 104514

I just purchased a rig at a flea market .... total weight is about 250 lbs. This is in 3 sections, with the following designators:

CAY-52239 HF xmtr

CAY-52238 IF xmtr

CAY-20084 rectifier modulation unit

These were restored in 1949 in the Boston Naval Shipyard, and look brand new. They came with an unused carbon microphone and an unused code key.

Does anyone have any idea of the power output of this rig? ANyone know of where I might find a manual.

If anyone has any history of it, I would be interested to know.

Thanks a bunch!

F.P. on 509 looks very nice. PTO either needs rebuilt or the dial needs re-strung. The knob seems to '"slip". Have matching supply. Have the manual. Homebrew 100 watt amp. Covers same bands as Argonaut. 4 watts in = 100 watts out. open frame design patterned after the ARRL Handbook. No scat but it works great. No I am not the builder.

I bought an Omni C so I don't need this set up. Make offer for whole package. WILL NOT SPLIT.

There were different NY addresses:

ca. 1925 - 1935: 825 Broadway, NY, NY

1935 - 1941: 832 Broadway, NY, NY

1941 - 1979: 833 Broadway, NY, NY

ca. 20's/30's: 796 Fulton Street, Brooklyn, NY

>
> #2 What is the value of a Standard Lightning Bug #257733

Using the normal S/N convention, that looks to be ca. 1968 vintage.
Value will depend on condition and what the "buyer" is looking for.
Most "modern" bugs hover around $100 at auction (ebay), and can be
much less at a hamfest or flea market. You never know!

I am posting this ad for a coworker without USENET newsgroup access.
PLEASE respond directly to him (Mark Chiappetta, mchiappetta@amp.com),
and do NOT respond to ME, or to the NEWSGROUP.

The following items are available for sale/trade...
HeathKit AA-100 Stereo Amplifier (about 20W/ch)
Dewald Concerto A-9000 stereo Amplifier (about 20W/ch)
Bell Stereophonic '3030' (about 30W/ch)
Homemade push-pull linear (811's) XMTR enclosed Aluminum chassis,
probably 10MHz and 20MHz. (30Meters, and 15meters).
Oscillator, circa1944, uses 1626 and 1625s, 5-9MHz tune.

Tubes:
802 Qty=1 vitals;13W/500-600V/60mA
807 (and 1625s) QTY>10 vitals; 55W-120W/400-750V/200-240mA
811 QTY=2 vitals;178W-340W/750V-1500V/260-350mA
813 QTY=2 vitals; 260W-490W/1500V-2500V/255-305mA, & sockets.
837 QTY=2 vitals12W/500V/80mA (seems low, probably better than 807)
4-125A (6155) QTY=3 vitals; 125W/2500V-3000V/225mA, & sockets.
HV-27 QTY=1 vitals, probably like 813.
304TL QTY=2 vitals; 4 triodes in parallel, probably 300W.
have other tubes, but who cares?

I would be interested in trade for the following:
6L6GC, KT66, KT88 tubes.
High wattage audio transformers.
McIntosh 275 chassis for resto, or similar.

this turn is mine,

i thank the gates of earth, for the fine and coherent work done by MICROSOFT Corporation, its employees, and subsidiaries.

i prefer to have one big monopolistic behemoth of a company dishing out the usual stuff, cause then we know who to complain to.

every time someone, some government, some other whining competitor, some greedy lawyer or anybody tries to screw up a well run company like MICROSOFT, just remember that in 90 percent of the cases, we the consumer have paid MORE after they did it and got LESS in return.

Corel, well, thats just another company that just "aint got it all together!"

they will eventually fail and disappear, hopefully, unless some whining buerocrat with stock or a PAC donation in his pocket tries to "save" the consumers interests !!! ha ah ha!

now i feel better. bye!

Kinda sounds like the TBW-4 or the GO equiv. Does the HF and LF transmitters have 803 finals, and are they about three feet tall each? Does the P/S have 1616 rectifiers and does the P/S set between the Two transmitters when connected together. If so it is the TBW-4 or GO-XXX set, the power source is 115VAC at 800 hz or higher making the power supply a near total loss, but the old HF transmitter is kind of cute and on HF you can get about 25-50 watts out on AM phone with suppressor grid modulation--maybe even 75 to 100 if you have a good tube in the final and enough plate voltage...Only thing that bothers me is the weight of the system as the TBW-4 set was mostly aluminum construction and fairly light all things being equal. Had one on the air back in the very early 60s with a home brew power supply and a battery charger and storage batter system for the really slam home relays in the rig.

VINTAGE FIELD DAY!!

Plan now!

Last month Barry announced the date - the weekend of June 13/14. This month after receiving input from a number of people, I'm announcing the rules. There was considerable opposition to the idea that VFD should be a contest, so we've deleted that part of it. Instead, we'll print reports from as many stations as we can fit into the August issue. The reports should consist of station logs (with all the usual information), descriptions of equipment used/power source/antennas, etc and of course we would like photos. Reports must be submitted to arrive here no later than July 15. Jim Hanlon, W8KGI, will be producing an article on the event and extracting material from the reports sent in. The rules are pretty darn basic: The event starts at 7 pm local time on Saturday, June 13, and ends at 7 pm local time on Sunday, June14. Incidentally, the first FD held back on the weekend of June 10/11, 1933, used the same starting and finishing times. All stations participating in VFD must use vintage tube-type equipment, operate CW or AM and fullfill the following, taken from the original 1933 rules, "Only portable stations, actually in the field, away from home addresses are eligible to submit field day scores". QST will have a mention of our VFD in their May issue and I'm asking everyone with a website to help publicize the event. Let's hope this VFD is a big success. Barry Wiseman, N6CSW

I didn't take the time to look it up, but some time ago someone
was looking for information on a Collins filter, and someone else
mentioned there was a page at http://www.wa3key.com/filters.html
with information about them. It's still there, so you might take
a look.

Also, was it a junk store in Toronto that just happened to have
some filters, or an electronic (junk) store where there might
be other filters and items of interest? Other people here in
Canada might want to know.

2970. Re: How to modify an AM rig to also do CW

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-28 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980528012558.27413B-100000@Stratus.CAM.ORG>
Source record: 104573

Are you planning to use the receiver? If so, don't count on being
successful with the superregen's wide bandwidth and lack of beat.

Even if using a separate receiver, CW may be difficult because
with something like two stages (or is it three?) in the transmitter
it might be hard to find something to key.

Maybe somebody else can give a solution. The real point to this
reply is to point out that there was at least one article about
using the Twoer and MCW. In other words, feeding what amounts to
a code practice oscillator into the microphone jack, and it will
just be an audio tone at the am receiver at the other end. Works
fine with a superregen receiver; used to be that the cheap 27MHz
walkie talkies all had this "feature". The same technique is
being used nowadays to send code practice through repeaters, except the
audio is fed into the FM transmitter.

I have near mint cosmetics HQ-145 receiver for sale. General coverage, plus ham bandspread. The Hammarlund has original large box speaker, marked Hammarlund, and copy of manual. HQ-145 - 145.00, speaker, 50.00 - both for 190.00

Also have really minty NC-109 receiver, same vintage (late 50's) as HQ-145. Many have called this the nicest looking National from this period. As nice as I have seen. No manual or speaker. 140.00

Both radios light up and play. Hammarlund has great audio for SW. Prices are plus shipping from VA.

EMail K4IQ, use address jbmitch@vt.edu.

Source record: 104594

Today 28th may 1998 the old 200 kW Alexanderson alternator in
Grimeton Sweden is on the air again on 17.2 kHz. Call SAQ.
This mornings transmission 0915-0945 UTC was received well here in
Belgium, try to listen 1500-1530 UTC today.
The Alexanderson alternator was build for traffic with the USA in
1923 so wonder if it still can be heard over there.
Switch all TV's and ac dimmers off.
I also heard RDL (Russia?) with cw en 50 baud rtty on 18khz.
Grimeton will transmit a message in A1 for 15 minutes and will repeat
that once more.
More on Grimeton: http://www.telemuseum.se/Grimeton/

If you quote Professor Lott, The violent crime rate drop when the
average citizen has the right to carry a loaded firearm.He has graphs to
prove it. Even HCI reports claim 29,000 times private citizens stopped
violent crimes by the lawful use of firearms, so even that group says
legal gun ownership reduced crime.Is working here in Phoenix,Az.

2994. Hey! What/where/when is an HKIT IP-2701 power sup

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-28 00:00:00 UTC

I've got this really nice (well it would be if it worked)
Heathkit IP-2701 0-60V, 1.5A power supply. It has a digital
current/voltage display and adjustable current/voltage. I
have been looking for the manual for it with very little
luck, anybody know what I'm talking about.

Thanks

Precisely how many guns did they get off the street? How do
you KNOW this figure? You can't!

The only real gun "program" was an attempt to catch people
who bought guns in one state and sold them in New York. There
is no way to assess how effective this single step was.

Guiliani had a comprehensive program and people like you are
ascribing the entire positive result to something you can't even
put a number on. You can't use univariate statistics to prove your
point. You have to do something akin to what John Lott did.

Well, since the cops "got the guns off the street" by taking their
owners off the street rather than ignoring them like usual, I'd say
they were trying to get the individuals with violent tendencies
under control....

>I have recently acquired an old Simpson 160 multimeter. It seems that all
>that is wrong with it is that the meter needle sticks in at times. The
>needle is clearing the dial. The problem is clearly down inside somewhere.

Most sticky meters are contaminated with very fine metallic particles that are attracted to the magnet and find themselves lodged between the magnet and the moving vane. If you carefully disassemble the meter, you can expose the meter movement. Sometimes it is necessary to remove the meter scale. Find a non-magnetic probe or stainless-steel tweezers, slice thin strips of cellophane tape and position one end of a strip at the end of the probe or tweezers. Very carefully insert the free end of the tape in the area between the magnet and the moving coil. Use a magnifying glass to watch what you are doing and to locate and remove the metallic particles. Don't hesitate to change the tape if it has picked up any metal, change the tape frequently. Stay away from the coil springs, one touch and they can be badly damaged. You can test the meter by gently blowing on the needle. You should be able to position the needle anywhere on the scale without it sticking. If it continues to stick, there are still metallic particles inside the meter.

Sometimes dirt or corrosion has affected the pivots. If this is the case, you can use a small screwdriver to back off a set screw 1/2 turn or so to free the mechanism. Often you will have to retighten the lock nut. It is best to avoid this adjustment unless absolutely necessary.

Gentle, patient work under a magnifying glass is a must, as are the right tools. Meters can be restored to good operating condition with this procedure. (Don't use any lubricants!)

Good luck!

This is unfortunate. Not in a moral sense, just in a accessability sense. Since filtering services generally dont dont filter based on the url but rather on the IP address, an adult site at the qth.com site will likely get qth.com filtered for some people.

3022. Need xtals for HB RX!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-29 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <356ec460.258240652@news.erols.com>
Source record: 104535

I'm about half-way through my Mighty Midget RX project and am starting
to get concerned about the crystals for the half lattice IF filter.

I need two rocks in the 460-465 khz range. FT-243 holders would be
the best, but other casings would probably also work. 455 khz rocks
in FT-243 holders would be ideal.

Lew McCoy used surplus crystals in his original version of this RX.
He mentions Channels 327, 326 and 45.

Anyone out there have any crystals that could make this HB radio play?

I have original Hammarlund Radio advertising flyers for models
HQ100, HQ110, HQ145, HQ160, HQ170, HQ180, SP600-JX and HX50.
All except the HX50 are four pages. The HX50 flyer is two pages.
All are in good condition but are punched for a 3-ring binder.

I would like to trade these for similar material on National Radio
equipment.

tnx, Niel-WA5VLZ, Rochester, MN

3024. Wanted-line-up details for Realistic DX-302

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-29 00:00:00 UTC
From: al@boltons.demon.co.uk
Message-ID: <356e99b9.5922714@news.demon.co.uk>
Source record: 104537
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.shortwave,uk.radio.amateur,alt.ham-radio.hf

Thanks for reading this,

I would like to obtain full alignment details for the Realistic (aka Tandy, Radio Shack) DX-302 general coverage receiver. Failing that, I expect the details for the DX-300 may be of some use. I already have the user's manual but this is of little help.

I have one of these receivers which is working but it is rather deaf and not displaying the correct frequency.

I would be grateful for any help and will pay for your time and any photocopying, etc.

Best wishes,

Al Bolton G4VSQ/OK8VSQ
Caversham, England.

3030. FS: Collector's Premium Quality Millen Grid Dip Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-29 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6kn3pluib1@nnrp1.dejanews.com>
Source record: 104543

Collector Premium Quality Grid-Dip Meter made by James Millen Mfg.
Co. Inc., Malden, MA., U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit is like new and is in amazing condition! See Photo.
It even has the original box, packing and manual with it. One
lucky person apparently sold a unit for $325 in this super condition
and I have seen them for $65 as well in decent condition.

Candidly, this meter is priced for either a collector or someone who
wishes to pay a premium to have one in new extraodrinary cond. in the
original box and not the operator who just could use a meter. Again,
similar models in lesser condition can be had for well under
$100 if simple utilitly alone is the objective.

Will take best offer between $160 and $175. Due to the amazing
condition of this unit cannot consider offers less than $160. This
is a rare find. Will also consider some type of swap for a Hickok
Navy or Air Force military 118 cardmatic tube tester.

Thank you.

Thanks for looking.

I have recently acquired an old Simpson 160 multimeter. It seems that all that is wrong with it is that the meter needle sticks in at times. The needle is clearing the dial. The problem is clearly down inside somewhere.

I have seen this many times before. Does anyone have a fix for this? Is it bad bearings? Is there a recommended lubricant for meters?

tnx

(Ebay address deleted for sanity....)

I have seen these cords advertised. These things sell to the same folks
that buy "directional speaker cable" and believe that all audiophile cable
should be "broken in" before it will sound satisfactory. Snake oil? Yep!
But all in a days work for a Golden Ear Audiophile.....

:-)

Collins 55G-1 preselector/speaker for the 51S1 receiver. Rack mount unit, serial number is 549. Condx CCA Very Good, would be Excellent but has one knob skirt broken. (Available NOS from Surplus sales, so I am told) Pictures at alt.binaries.pictures.radio. There have been a number of parties interested in this unit; no bidding contest is fair without an open forum so here goes! To be sold by reverse auction. Starting May 30/98 at 1500 USD packing and shipping included USA/Canada, or hand delivered 4 hour radius of Vancouver BC. The price will drop 50 dollars a week, every Saturday 0000pst until this item is sold. No offers will be accepted except as shown below. This ad will be updated every Saturday, until the sale is complete.

05/30/98---$1500. 08/01/98----1050.
06/06/98----1450. 08/07/98----1000.

>These things sell to the same folks
>that buy "directional speaker cable" and believe that all audiophile cable
>should be "broken in" before it will sound satisfactory.

LOL! I had forgotten about those two. Same CES, I got the lecture on directional speaker cable, and 'breaking in" cable. I majored in Physics with a specialty in E&M, and for me these presentations are a hoot.

Now, to be truthful and absolutely fair, there is some, not a lot granted, but SOME science to support some of these claims. Ionic properties in newly drawn metals will have an effect on current flow smoothness. Further, many ionic impurities can be migrated out of the cables through current flow, so the concept of "breaking in" cables is not some, scant though it be, merit.

However, given the quantum nature of the anomalies at issue here, and the HUMONGOUS number of electrons in a given instant of flow, the difference in 'broken in' and not 'broken in' cables or directional and non-directional cables is likely to be measured in handfuls of electrons among hundreds of coulombs of charge. You'll have a greater impact on your listening by closing a window in the next room.

What I found hilarious, was the fact that some of these cables were made of oxygen free, pure, grain oriented, ion purged, multistrand copper wire. The ends, however bore pure copper spade lugs, that were gold plated, and silver soldered on to the oxygen free, pure grain oriented, ion purged multistrand copper wire. Meaning an interface of three dissimilar metals on each end of this theoretical perfect electron pipe. The resistance, not to mention capacitance, of each end of the pipe alone was hundreds of times the resistance of the wire itself, meaning, in real world terms, these people were paying $100 a foot performance for 14 guage zip wire performance.

We won't mention that the terminal on the amp was a standard steel binding post, soldered on the back to a piece of 16 guage copper wire. We won't begin to mention that at all.

I said in one of the rooms at this CES, "Spend less money on wire, and spend a little more on the acousitcs of the room. You'll get better results." One might have thought by the reaction that I had burned Mark Levinson at a stake in front of the Pioneer plant.

But I must be quiet about Reality, now. Clearly my assertions are bad for commerce, and that's bad for the economy.

Sorry, no time to check this out, as I'm almost ready to turn my entire
home wiring into a giant antenna. I was very pleased with the mileage
and power inprovements I realized when my dog installed a magnetic flux
device on my car's fuel line, thus turning each cylinder into a
miniature refinery.

I understand there are some articles in Hollow State News, issues #19 and #22, which deal with recapping the receiver to eliminate the "black beauties" which cause problems. If anyone has copies they might share (or other articles about recapping the SP-600) I would sure appreciate the help. Thanks.

3061. ? Clegg FM-DX

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-30 00:00:00 UTC
From: Don Nicolson <nicolson@erols.com>
Message-ID: <3570C51E.3EFA934A@erols.com>
Source record: 104374

I know this is not pure boatachor material BUT, does anyone have an old FM-DX ? I just bought one for a standby rig (couldn't pass up the price). The display shows seems a bit screwed up;

143 shows 149
144 14C
145 14d
146 14E
147 14F
148 148

Is this screwed up or is this Ed Clegg getting back at the world .... Hate to buy a manual, I'd spend more then I bought the rig for.

Thanks

Don KC1AT

Rider's Radio Perpetual Troubleshooters volumes 6 to 15, misc.
copies including several duplicates. Too much trouble to pack
and ship so will sell for $5 per volume, take one or more, or
maybe all. Some are "brand new" condition; others are fair to
very good.

If interested, send email at your convenience. This will not be
first-come, first-served; instead I'll offer them to anyone
who can make it convenient for me.

If you are still reading and happen to know of a library that
will accept donations of technical books for actual shelving,
public or educational, I have thousands of magazines and books
which need a home and am willing to donate them under the
proper circumstances. Need not be tax-deductible and I would
consider a group that wanted to resell them to raise funds for
a worthy purpose. Anything is better than sending tens of thousands
of items to the dumpsters.

All inquiries welcome; best time 6PM to 10PM weeknights; anytime
weekends.

If this message shows up in an inappropriate newsgroup for
commercial posts, please advise so the distribution list for
future book lists can be corrected.

Attention RF men (and ladies)!

For sale:

Millen Grid Dip System, Model 90662, in black-wrinkle metal case.

The system includes:

Model 90651 Grid Dip Meter with the later model rectangular meter.

1 - Model 90751 Tone Modulator.

4 - LF coils, covering 220 Khz. to 2Mhz.

7 - VHF coils, covering 1.7 Mhz. to 300 Mhz.

2 - Remote link-link coupling cables.

Price for this rare gem is $325. and I'll pay for shipping and
insurance.

I'm comfortable in saying that it's all in perfect condition,
but if any buyer believes this not to be so, upon his prepaid
redelivery to me in unchanged condition, I'll refund all of his money.

Source record: 104473

This is so hilarious I had to post it. According to the text, this handcrafted AC power cord will significantly improve the performance of tube gear. Maybe this cord is all that stands between an R390A and great SSB performance. See it at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=15656326

3075. Re: Meter Movements

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-30 00:00:00 UTC
From: "John D. Farr" <johnfarr@ro.com>
Message-ID: <6ko4mf$3h0$1@news.ro.com>
Source record: 104475

To all who replied:

Thanks much for the help. In addition to the public response, I got three others via email. According to everybody, the cause of meter sticking usually is iron filings that collect on the magnet. One individual also suggested checking for a crossed up spring, and checking for worn out or misadjusted bearings. I'm pretty sure that this about covers it.

Thanks again
John

I've worked on some meters and usually you will find a small bit of trash (usually metal filing or such held by the meter's magnets). Finding it means opening the meter apart carefully and examining the magnet gap, windings springs, etc using a jeweler's loupe or strong magnifier glass and good lighting. Getting trash out requires small tools (tweezers, preferably non-magnetic so you have better control) and patience. I wouldn't recommend lubricants, they tend to attract dirt.

So true. Audio delay can make a signal sound louder, but it usually doesn't add
at all to intelligibility. It often makes it worse.

> If you are an experimenter, I'd build and play with various audio
>clipping-filter circuits for the best bang on the bands. You should add a

>clipping.

Adding audio gating can make a dramatic improvement in processed audio.
Audio clippers should generally be "soft" clippers, and the gating should be
soft as well. Otherwise, you add so many distortion products that intelligibility
is impaired. (RF clipping sidesteps this by putting most of the higher order
distortion products out of the passband.) Dolby-like companding can also be
used to advantage, if used at both ends. This is a worthwhile area for experimentation.

I sent this message yesterday, but made an unfortunate typographical error. I need some cystals in the 450-465 Kc range. Here's the corrected message:

I'm about half-way through my Mighty Midget RX project and am starting to get concerned about the crystals for the half lattice IF filter.

I need two rocks in the 450-465 khz range. FT-243 holders would be the best, but other casings would probably also work. 455 khz rocks in FT-243 holders would be ideal.

Lew McCoy used surplus crystals in his original version of this RX. He mentions Channels 327, 326 and 45.

Anyone out there have any crystals that could make this HB radio play?

This radio is in excellent shape and to prove it I will take additional pictures of areas you choose. Everything works and I have carefully replaced all caps. The only hum you hear is when the volume is all the way down. The sensitivity is very good on all bands.
Note: The case has been re-painted and handles were removed. This unit has been aligned to specs and there is no need to fiddle with anything. It is ready to use. In December I hooked up my Kiwa Loop and received Seviile,Spain 855khz/1044khz Morrocco/1314Khz Norway off course they are not hard to hear with a good communications Receiver, but it shows how well the Q-Multiplier works and crystal phasing. $230 shipped in a $30.00 re-usable container. The highest bidder gets it. I'll close this out Sunday 6:00pm EDT

A friend at work from another country has located a station about 200 mi away that broadcasts news from his country in his language on 1180 kHz. I thought I had some info on building a small air loop with capacitor to help him receive this station and reject others. However, not only can I not find the info, Radio Shack does not seem to sell variable caps of ANY size any more to use in its construction.

Can posters here help out with either:
1. a Web site with easily found materials to build a modest sized air loop
or
2. a ferrite loop with easily found materials to build a resonant LC circuit

His radio does have antenna and ground screws on the rear. And he rejects the $50-350 commercial broadcast band antenna helpers found in Monitoring Times magazine as being too expensive for his pocketbook. [Hey, I do, too. <grin>]

I was at the Consumer Electronics Show in Chicago a few years ago, visiting the booth Set up by Magnum Dynalab. They had just introduced a line of power amps by Belles. Sitting between the B & W 802s, was one of the amps, and it was singing right along. Sounded great. On top of the amp, plugged into the same wall socket as the amp was a Radio Shack (Micronta) Digital Clock. Being the quintessential smartass I said to one of the audiophiles demonstrating the amp, "You couldn't afford a better clock?"

Not at all amused, he said in a thick Romanian accent, "Not for time. Power conditioner."

I laughed and he began to explain, in all seriousness, how the digital noise from the clock, fed back into the A/C line and smoothed out ripples, returned the A/C voltage to a pure sine wave, and synchronized the voltage and current phases through the transformer. He was offended that I didn't seem to be convinced...and asked me to leave.

Snake Oil in audio is a way of life. I think the pitches are hilarious. And the literature they pass out is more entertaining than Saturday Night Live. But then what isn't.

3101. FS: Collins TCS-12 complete setup (new lower price)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-30 00:00:00 UTC
From: kr4wmNOSPAM@bigfoot.com
Message-ID: <MPG.fd9c591cd8406ed9896cc@news.infoave.net>
Source record: 104501

Includes receiver, transmitter, two power supplies (one standard-duty and one heavy-duty) remote control box, and rare original hand mike. Also have original military service manual in fair condition and a copy in good condition. A box of spare tubes is included. Will also include information on how to convert it to coax feed. $175 plus professional packing and shipping. I will not home-pack this radio- it's beyond my capabilities. 73, -Web in Myrtle Beach, SC

Shipping zip-code: 29577
Shipping weight: about 275 pounds, 5 boxes

Or for those who really want to ease the strain on their pocketbook, the tuning capacitor out of most any old junked AM radio will work. All it takes to build this is the tuning capacitor, some wire, and a frame to wind it on, a foot to two feet in diameter, depending on taste. Wind some exta turns, then remove them one by one until the loop tunes to the bottom edge of the brocast band with the capacitor plates nearly fully meshed. It couldn't be simpler or cheaper.

Regards,

John Byrns

Looking for the Henry 2K DC filter choke that was used in the power supply. Rated at 17.6 HY @ 500mA CCS. Resonates with 0.1 uF 7500 volt cap. If you have the caps that would be great too but really need the choke.

I think there is some merit to some of the issues about power cords, especially as relates to RFI pick up. But the rest of the claims bother me.

Yet on the other hand, I changed loudspeaker cables a year or so ago, and even my (tin-eared) wife could easily hear a difference (for the better). I wasn't prepared for that to happen, so I'll just say I'm sceptical about many of the power cord claims.

The clock (which wasn't just a Radio shack clock, it was a Tice "TPT" treated clock, I'm sure) is a tough stretch for my mind at best!

The loop may do the job, but unless the station is on a clear channel with high power and you're talking about reception after dark, it may not even be possible to receive the station satisfactorily, if at all. I believe that AES in Arizona carries the variable cap you'd need for the loop.

Richard
Why not try on of the designs for 160 meter loops in the ARRL handbook
and extend the coverager down to 1100 ?
Mike
Question :
Is his BC receiver capable of receiving that distance with good
sensitivity?

$105 is actually pretty cheap for some of that high-end audio garbage! Some of those yuppie types will spend more than that PER FOOT for speaker cable or patch cords! Of course they sound better, look at how much they cost! :) Oxygen free, grain oriented copper in a proprietary arrangement (always looked like regular twinax to me), insulated with a polymer dielectric that guarantees a neutral soundstage (whatever the hell that is). You should check out a few of those sites, they make for a great laugh!

For one thing...we have no clue who the hell you are since you are
posting from a hotmail address. So please feel free to feel ignored!
I hope someone with more money and more time finds you and sues your
sorry existence. Or even better pays you a visit with Vinnie and Tony.

So in the meantime...take notice that most software companies web
sites list known bugs BECAUSE THEY RESPECT THEIR CUSTOMERS and they
want to keep the support lines open.
All alive humans breathe, and all software has bugs. Period.

You are out of order posting a mental barf like this.
Maybe you are frustrated. maybe you are mental. maybe you are a barf
and nothing else.

Go away and don't waste my time.

Say Hi to Vinnie. (if you see him coming)

3119. Re: $105 AC power cord? Is he serious?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-31 00:00:00 UTC
From: "John B. Lawrence" <jbls@lightspeed.net>
Message-ID: <3570CAC5.10699E86@lightspeed.net>
Source record: 104386

I've read some funny things on the 'Net but nothing so funny as morons who would spend hundreds of dollars for an AC power cable.

I may buy some stock in "audiophile" companies if they're really selling this stuff. Better yet, I think I'll start my own company. I'll buy AC power cables from the surplus electronics suppliers for 50 cents each and target my sales to audiophiles. Charge them $75.00 per cable and undercut King Kable's price.

Read the claims on Ebay. I'd like to take a Radio Shack AC power cable, send it to an audiophile magazine and make outrageous claims on its performance. Bet they would review it and say "ITS THE BEST WE'VE EVER SEEN!!!! WOWWOWWOW!!!".

3124. Model 15 rtty help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-31 00:00:00 UTC
From: hwh <74361.2114@CompuServe.COM>
Message-ID: <#ntGZSFj9GA.253@ntawwabp.compuserve.com>
Source record: 104391

James,
I tried to send e-mail message to you before but got a bad address message, so I thought I'd try this way.

I've worked on many Model 15's and it sounds like a problem in the operation of the return spring that pulls the carriage back to the left end of the platen. Here is a quick diagnostic to try. Sitting at the keyboard, space the carriage all the way to the right and turn the power off. Now look for the manual carriage return button on the left side of the printer, press it in all the way and hold it there; the carriage should now return all the way. As it comes to rest, listen carefully. Does it stop with a hard bang or do you hear a slight hiss as it comes to a stop? A hammer-like stop would indicate the dashpot is stuck, and that will interfere with the operation of the return spring.

Remove the cover and look at the back of the printer. There's a vertical shaft inside the machine, near the right end (as you are looking at it) of the platen, at the top of which is a drum with a fabric belt wrapped around it. The carriage return spring is inside the drum, and one end of the belt is attached to the carriage. Just below the drum you will see a horizontal bar; this is the lock bar. The right end of the lock bar is bent to form a sort of tab; this is the manual carriage return button. Just below the lock bar you will see a cylinder-like device with a screw adjustment at the left end; this is the dashpot. At the right end of the dashpot, the dashpot piston rod is attached to the dashpot lever. Just above the dashpot, the lock bar is held by a screw in an elongated slot and next to the screw is a small spring-loaded T-shaped catch; this is the lock bar latch.

At the bottom of the vertical shaft is large gear and just below that is a small gear-tooth clutch that is supposed to disengage so the return spring can unwind, pulling the carriage back. The lock bar latch (via bars and levers) is supposed to keep it unclutched until the returning carriage hits the dashpot lever, which depresses the dashpot rod and moves the lock bar latch clockwise, releasing the lock bar to allow the clutch to engage again. Then the spring will then get slowly wound up again as the carriage moves along the platen during printing.

I'd bet that the lock bar latch isn't engaging the lock bar. Hitting the carriage return key opens the clutch, but without the latch, it quickly falls back into place, allowing only enough time for the carriage to move back a few spaces. It might be that the lock bar or the latch is worn or the latch's spring is broken/missing. An better bet and easier to fix is that the dashpot rod is stuck in the dashpot. If the dashpot rod isn't extending out of the dashpot as the carriage moves to the right, the dashpot lever will hold the lock bar latch open, allowing the gear-tooth clutch to

re-engage before carriage return is complete.

Go through the diagnostic procedure again but this time watch the action from the back of the printer. Hold the carriage and move it slowly back to rest while observing whether the dashpot rod, lock bar catch, etc., are moving freely. You may have to disassemble and clean the dashpot and/or the lock bar latch. Let me know how it works out.

Wayne

>73, Joe

Joe - here is a suggestion - we NEED To get on and operate AM!
Don't leave the mode to those who do not give it a good reputation!

If you think they are too long wionded, get on there and make an AM QSO wwith
someone and have SHORTER exchanges!

If you don't like how one or two of them cuss and make fools of themselves, then
get on AM and set a better example by NOT cussing and acting silly.

The best bet is DAYTIME AM QSOs on 80 and 40m. Conditions are better and
you never know what kind of interesting conversation you will strike up!

See you on AM!

I have for sale a mint TR-7A drake line, comprises following equipment:

- PS-7 power supply
- TR-7A HF transceiver (NB and filters factory installed)
- MS-7 external speaker
- RV-75 external synthesized VFO
- MN-2700 2 kW antenna tuner, balun option installed
- Drake desk-top microphone

Transceiver,speaker, microphone and VFO are like brand-new out of the box, not a scratch. No modifications were done, everything is in factory condition.
The MN-2700 ATU is a 9 on scale 1 to 10.

All equipment comes with its original Drake manual.
Will also include original Drake advertisement leaflets

Message-ID: <6krsl7$gt5$1@csu-b.csuohio.edu>
Source record: 104410

Atwater Kent Type E3 Radio Speaker. The unit's chassis appears to have the original paint job and the paint is in good faded shape for its age. Meaning the gold is not bright as it was when new. Of course there's some chips, etc., but overall I'd call it good. If you want perfect in every way, this unit is not for you, but if you're reasonable with expectations for something that was made in the 1920's--you can use it without repainting it as is. The two cloth covered leads appear to have the original pins on them. Two of the six brown felt pads are missing on the base (not a big deal at all and easily dealt with).

The negatives are that the cloth grill will need to be replaced as it is torn in one spot both front and back of the unit. Also the speaker will have to be re-coned at it is visibly torn from inspection through the cloth grill opening. That is all I can say about the unit, I do not have an A-K to plug it into to test it.

$100 plus shipping.

>
>I have seen this many times before. Does anyone have a fix for this? Is it
>bad bearings? Is there a recommended lubricant for meters?
>
I don't know about simpson meters but I had the same symptoms on many
other meters. The problem came down to muck getting between the coil
and either the surrounding magnet or the cylinder of metal inside the
coil. I cleared this with a fine plastic stick and one of the aerosols
that you get for cleaning cameras. Ususally, if you are careful, you
can affect a complete cure.

The usual causes are flaing paint or similar, sometimes corrosion.
Meters, or not the ones that I've seen (a small and not exhaustive
list), do not have lubricant.

3145. FS: MILLEN 90651A Grid Dip Oscillator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-31 00:00:00 UTC
From: mc@shore.net
Message-ID: <6krvhi$43k@northshore.shore.net>
Source record: 104412
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

This is the hybrid model - uses a 9002 tube but looks like the solid state dipper. It is gray in color and has the square meter and most important, has a built-in tone oscillator which was not incorporated into the earlier Millen GDOs.

This GDO is clean, works fine and comes with 5 coils. The 'B' coil that covers from 3.1 to7.4 is missing. I have an extra A coil that may be modified by removing some of the turns to increase the frequency that will be included. It is also possible to buy Millen coils from Caywood Electronics in Andover MA but I don't know what the cost would be.

Price is $65.00 plus UPS for the GDO and the six coils.

If interested please reply by e-mail.

Anybody interested in this unit at all? I got a couple of replies, but none apparently were serious. So, here we go again. No, I'm not going to give it away. I will accept what I have invested, which is about $150. So, if you want one in operating condition, e-mail me ASAP. This set includes:

TCS-12 transmitter
TCS-12 receiver
CKP-20309 Rectifier power unit
PP 380/U power supply
CWS-23270 remote control box
All cabling
RS-38A hand microphone
Spare tubes for everything
Original military shop manual
Copy of military shop manual
Conversion instructions from whip to coax feed

Please, no requests for copies of documentation.

You will be responsible for packaging and shipping. I will deliver it to my local Mailboxes & Etc. for this purpose. Approx. weight 275 pounds, 5 boxes.

Shipping zip code: 29577
e-mail me at: kr4wmNOSPAM@sccoast.net

Working perfectly- will sell for $300 plus shipping. Missing some lettering on the front panels. I have the original boxes and owners manuals for the transmitter and receiver. I will include double boxing at this price. Just trying to make some elbow room in the shack. You will not hear better audio than what comes out of this receiver! Will include MC-50 microphone in good condition for $60 more. Will not sell mic separately.

Shipping zip code: 29577
Shipping weight: about 100 pounds, three boxes. (four if you want microphone)

E-mail to kr4wmNOSPAM@bigfoot.com

Don't forget to remove NOSPAM before sending me e-mail!

73 all, -Web in Myrtle Beach, SC

Even if I do own one, it is no one's business, and I too am a Ham
Operator. Do I or don't I? The burglar or anyone else uninvited, who
enters my home will get the real answer if and when that should happen.
Guns and Ham Radio have nothing in common, so why thread such a ridiculous
subject in a RADIO related News Group?

Lou

I'm looking to buy a Hammarlund HQ-160 receiver. I'm a collector (of sorts) and looking for one in very nice mechanical condition (front panel must be near-perfect, I can paint the case) and working. I could use a matching speaker, but not essential. Thanks for the read. Jeep K3HVG

3164. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-05-31 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6kqprv$htn@news.Hawaii.Edu>
Source record: 104431
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Collins 55G-1 preselector/speaker for the 51S1 receiver. Rack mount unit, serial number is 549. Condx CCA Very Good, would be Excellent but has one knob skirt broken. (Available NOS from Surplus sales, so I am told) Pictures at alt.binaries.pictures.radio. There have been a number of parties interested in this unit; no bidding contest is fair without an open forum so here goes! To be sold by reverse auction. Starting May 30/98 at 1500 USD packing and shipping included USA/Canada, or hand delivered 4 hour radius of Vancouver BC. The price will drop 50 dollars a week, every Saturday 0000pst until this item is sold. No offers will be accepted except as shown below. This ad will be updated every Saturday, until the sale is complete.
05/30/98---$1500. 08/01/98----1050.
06/06/98----1450. 08/07/98----1000.
06/13/98----1400. 08/15/98----950.
06/20/98----1350. 08/22/98----900.
06/27/98----1300. 08/29/98----850.
07/04/98----1250. 09/05/98----800.

Hi,
Have a good condition ECI fleet courier 30B - vintage 1966 or so.
This is a 5 channel (crystal), 12 Watt, FM VHF low band
radio transceiver. Cabinet is all chrome and looks very good.
Front panel is also excellent. Chassis is dusty but the
radio works well. Have both AC and DC convertors for you nostalgia
buffs.

Ideal for 10M FM or 6M FM -- currently on 26.100 Mhz and
looks great per a service monitor.

I'm asking $20 + shipping

thanks,
Joe
N0IAT

3175. Heath Gear

Newsgroup: rec.radio.amateur.boatanchors

Apache and Mohawk set, with sideband adapter. Receiver works, TX is down, but
is complete (all tubes check good and transformers still have the smoke on the inside).

What might these be worth?

Regards, Ernst Land

3176. Re: $105 AC power cord? Is he serious?

Source record: 104443

Hey, its not just the audiophiles who fall for this stuff. Is the price of Collins gear truly in line with its on the air performance? True, we are talking about a 'collectable' item, but some of the prices I have seen for S-lines are really very funny. Then there are all the weirdo antennas for sale, especially the limited-space variety. Sure, you'll get as big a signal with a 1/64 wave antenna as the big guns with their stacked long-boom yagis. . .
Just I minute while I load up my magloop with a kilowatt. . .

Message-ID: <6ks5maqri2@news.harvard.net>
Source record: 104445

I am shocked and astonished by the lack of acceptance here of these highly-researched & proven technological milestones that have so advanced our hobby. Why, I rewired my SP-600 entirely with oxygen-free wire, gold-plated every one of the tube pins & every contact in the RF deck, and replaced the JAN 6V6 with a Mullard; it NOW tunes SSB without using the BFO, brings in 6M AM from Korea, has perfectly flat audio from DC to 30KHZ, performs oral sex when both main & bandswitch knobs are properly manipulated at the same time, and I can PROVE it. <harumph> And I didn't have to replace a SINGLE Black Beauty!

I have for sale a collins R-391
The set is in very good cond on the outside but dirty on the inside. It comes with orig. meters and top and bottim covers. The set works well. It is missing the orig. MC and KC lock keys but it comes with lock keys from a R-105 that look the same and can be modified to work.
I am asking $450.00 for the set. Prefer pickup I am in Dubuque, Iowa. I can bring the set to the Princton,IL Hamfest on June 6,7.

>Does this mean they need to get a life?

No, it just means that they need to make an offer and not be embarrassed
if you don't agree to sell at their price.

Gene I think you make some good points.

I am not someone who collects those "perfect specimens."
To me, $900 sounded possibly a bit steep, but I have never seen one of these for
sale before, so what do I know? Maybe they have, but I doubt it. When you
included your open-ness to offers, that should leave the door wide open to folks
with a differing opinion to make an OFFER, not to grumble!

Source record: 104330
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

As stated, Nice R-4B. Front panel near mint, case nice (touched up on corners, have
to look close!) , chassis average or a little above (slight pitting, not a rust bucket!)
Has had critical tubes replaced and complete alignment in last month. Very hot,
working great. New agc bias and audio decoupling caps. (typical drake problems
after 25+ years)
With nice original manual in folder, dated 1971, probably a late R-4B.
PTO tight and smooth, end stops working as they should (another drake weakness)
Pick-up in Denton, Tx.-- $170
Shipped in 5-land -- $190
Shipped elsewhere CONUS -- $200

This receiver is plug & play -- it needs nothing as of now.......

Might consider EXC + or better HW-16 with/without HG-10 as part
trade. Or other CW tranceiver??????? Trade even for HW-99 (I think that's
the model....) in nice, working shape with manual or copy.

Thank you, Walter S. Delesandri

do you watch COPS? How about getting the bad guys off the streets
forever? Teach the kids right from wrong, so we won't have to lock up so
many of the next crop of kids. Let the schools teach morals.
Wht is the HOLY BIBLE banned from public school, and playboys are not ??
A weapon is A weapon only if it used as a weapon. A firearm is not a
```

weapon unless it is used that way. I shot about 100 rounds yesterday from several firearms not one was used as a weapon. Try shooting as a sport, you might find it to be fun , like ham radio.

3200. AM Freaks

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-01 00:00:00 UTC
From: wichy <wichy@dallas.net>
Message-ID: <35727967.D07@dallas.net>
Source record: 104333

You can try the following frequencies. Note: all the frequencies given are in MegaCycles which is different than MegaHertz. (I believe that radios should NOT be painful...)

3.885 Mega Cycles
7.290 Mega Cycles
14.285 Mega Cycles
29.000 Mega Cycles

The best bets are 80 and 40 meters during the day and late night. 20 Meter during the early evening and 10 meters during the afternoon.

As always, If you don't hear anyone - give a short CQ - BA and see what happens. There is a lot of local AM activity here in Dallas.

I monitor 7.290 with a Globe Scout 65A and Echophone EC-1 RX. For 29.0 I use a Gonset G-28 and a beam.

Hope to hear you on AM. 73, WDï¿½HCO

3201. Help with Heath AA-18

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-01 00:00:00 UTC
From: jherman@diamond.sierra.NET
Message-ID: <Pine.BSF.3.96.980601080005.22179C-100000@diamond.sierra.net>
Source record: 104334

I've got a Heath AA-18 (audio amplifier) which is not amplifying; output is only a loud hum. Al (ni4q@juno.com) sent me a very fine reproduction of the manual; the voltages in the amp are all lower than those on the schmatic (21v bus is 15v, 14v bus is 10v). I replaced all the electrolytic caps - the voltages are still all off, and the hum is still present. The power x-former's secondary (when removed from the board) is reading a correct 34v (center tap is correct at 17v).

This is a SS device, but at least it's a Heath! Any suggestions what to do next?

>

Thats cheap! I have seen power cords go for nearly $1000.00. It is not uncommon for audiophiles to pay $200.00/ft for speaker cables. Even RCA cables can run $1000.00/pair!

Ever hear of the infamous 'green felt tip pen' for $25.00. You take a CD and paint the outer edge green with the pen. It keeps the unwanted reflected laser light from bouncing around the CD and interfering with main beam. You don't want to degrade those 1's and 0's in the datastream!

The best one I have seen is 'Wonder Solder'. It sells for 5x what normal 60/40 solder costs. Yes, even solder can sound better if you are willing to pay enough for it!

3204. Fair price for a Hammarlund HQ170?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-01 00:00:00 UTC
From: "Scott N. Wills" <chiabird@aol.com>
Message-ID: <3572E189.6D5D@aol.com>
Source record: 104337

Hello,

I was at a flea market yesterday, and talked to a guy who was selling a Hammarlund HQ-170 (or maybe SQ-170? - I can't remember right now!) for $100. I am interested in purchasing a tube radio, but don't know how to tell if this is a reasonable price. I don't know if it works or not, but would be interested in it either way - again, assuming the price was appropriate to its condition.

Can anybody suggest what would be a fair price for this receiver?

Thanks,
Scott Wills

And
>the literature they pass out is more entertaining than Saturday Night Live.
>But then what isn't.

Hey, I used to buy AUDIO magazine because lots of the ads and reviews in it
were great comedy! What's hard to swallow is that ANYone takes some of this
stuff seriously.

I do believe that the "power cord" issue is the funniest I've ever seen.....

Oh, I always liked the speaker cable ads, and the reviews of how subbing out
some capacitor for a "hand packed, specially designed" coupling capacitor
made "all the difference in the world" in the way some power amp sounded....
Right.

Great stuff.... :-)

Scott, the value of anything on the market is precisely what you are willing to pay for it. Prices frequently reflect this. At least for some buyers. You'll see this radio going for $175-$225 routinely here and at hamfests. Whether that's fair is to be determined by what you are both willing and able to pay.

My advice is to ignore the stated price. If you don't wish to pay that, take a pass. If you are, don't worry about what anyone else pays, and be happy with your purchase...but the bottom issue is that you have to be satisfied with the item you bought, versus what you COULD have bought with that same money. If you measure your purchases by this criterion, you'll buy well.

Actually, a 1934 Supreme Court ruling declared Tesla as the sole inventor of radio. He was the first to describe LC resonance correctly in a patent application. Edison, DeForrest, Armstrong and even Marconi lost out on a number of patent lawsuits against Tesla. (Hertz had formulated the theory of electromagnetic radiation but never lived to see it generated by man.)

So it really should be Mega-Teslas...!!!

The "Tesla" is also a measurement for magnetic flux.. since he also patented the Polyphase distribution system and alternating current rotating magnetic field motors.

Interestingly, in 1903 Tesla also patented "OR" "NOR" and "AND" logic elements as basis for a "thinking" engine. He built upon work from both Babbage and Pascal.

Such engines are now known computers. He also pioneered "Tele-Automation" now known as robotics.

So next time you boot up your PC, remember TESLA.

He invented the Polyphase power distribution system to supply AC power, the logic elements on your motherboard and the high voltage coil that drives your VGA display tube...

He died broke in a 3rd rate NY hotel. While he was Earth's greatest scientist and inventor, he was a very poor business man.

Hi Biz-

Hey, you're preaching to the choir! I'm a confirmed Tesla fan. Got books about him, etc.....

You are totally right: he's gotten less recognition for doing more than anyone else I know of. Seems there was never a shortage of folks around to take credit for his inventions..... Too bad he won't be around to see it even if the widespread recognition does one day come to him.

I really do think changing "cycles per second" to Hertz was a bad idea....

> subject in a RADIO related News Group?
>
> Lou

Really? Aren't they both hobbies, or recreational activities? As hobbies, don't they both empty your bank acoount and fill your free time? Don't many individuals enjoy participating in both hobbies. Don't you run into many people also interested in the second activity while you're at an event related to the first one? Aren't they both valuable tools with great power? Haven't both served to prevent crime and save lives? Haven't both been abused or used in a criminal manner? Haven't both been attacked in the name of law enforcement and crime prevention? Haven't repressive regimes sought to confiscate both items from their subjects?

I'll admit that the subject is off topic for some of the news groups it is posted to, but I did not post the original thread to these new groups. My point in asking the question was to confirm my belief that most Hams also enjoy firearm related activities. If you felt my question was irrelevant or ridiculous you could have ignored it. I apologize for any inconvenience it caused you. By the way though, judging by the response I've seen, I'd have to say by belief is correct - most Hams also enjoy firearm related activities...

Sorry, no time to check this out, as I'm almost ready to turn my
entire
home wiring into a giant antenna. I was very pleased with the
mileage
and power inprovements I realized when my dog installed a magnetic
flux
device on my car's fuel line, thus turning each cylinder into a
miniature refinery.

Ed

Well may you scoff at this, but my dad had a little cardboard pyramid
under which he kept his razor blade. It never needed sharpening and in fact
became so well honed that one morning he sliced off the end of his nose and,
sadly, bled to death. I am building a large pyramid to house my Taiwanese
stereo equipment and I am sure there will be an immediate and noticeable
improvement - if I can just get a review in one of those audio magazines,
I've made my fortune....
Tony.

3227. FA: Stancor Transmitter Manual!

Newsgroup: rec.radio.amateur.boatanchors

I have a nice old Stancor transmitter manual - original, and in near mint condition. It's for the ST-202A a popular little mobile HF rig in the late 40s and early 50s.

Right now the bid is at $4.00 at the auction.

Make an offer and take it away cheap!

See:

http://www.atl.org/cgi-bin/auction.cgi?zbooks&897444954

I will try to add a picture this week. It has all the original material, schematics, pictures, etc. etc.

Bad idea. But a good idea is to buy my new product, the Magneto-Flux,
High Electron Field Density Transmitting Resonator. It is the best
portable HF antenna around. Made of a 3"D by 19'L piece of 24 karat
gold plated titanium-berillium-deterium tube, with a solid silver N
connector on one end and a Teflon plate on the other. Filled with a
patented space-time warping material, this antenna will break a small
hole in space and send your signal to another dimension and back thru
another hole to the other station, after you program the coordinates
in to the antenna with the included palmtop PC. This great product is
offered at an introductory price of only 8,019 deutchmarks. As it is
custom made and shipped from Germany, expect a delivery time of 12-20
weeks upon receipt of payment.

##
Hi-Mound Automatic Bug. Model #BK-100. (Also sold as Johnson and
Skilman Models.) Made in Japan. On Page 64 and 65 of KeysII The
Emporium by Dave Ingram K4TWJ. As described in the book........

"This delight is set into a black Plastic base fitted with Molded
Metal weights and a solid hold in place rubberized bottom cushion.
Contacts and adjustments face inward inside the base, and the full
mechanism is protected by a clear plastic Dust Cover." The BK-100
Sports a single Finger Piece, has a wide dot speed adjustment Range,
and produces some pleasant "Bug Chatter" during use.

This unit is in VG++ Condition......Only thing keeping it from
Excellent is some Glue Stuck on the Left Side of the Finger piece.
Real Clean. Fully operational....and A Real Nice Bug to Use!!

PRICE...........$65.00 USA
##
German WWII HandMic. This Mic Looks like it was probably used in a
German Tank!!! Nice little Palm sized Black Bakelite and Metal
Handmic. With Neat Styling. Has a Red Push to talk Button on the front
that has the word ""DRUCKEN" engraved into it. Over the front Grill
area of the Mic is Engraved in Red ...the following words... "Fiend
hort Mit!" ....which I am told means... "The Ememy is Listening!"..or
similar.
This is a Great Piece of WWII Radio History....and I would think there
is not a lot of these in North America!! I have never seen another one
of these before..Have You????

Has a Cloth Covered Cord.

>I do believe that the "power cord" issue is the funniest I've ever seen.....

I also used to subscribe to Audiophile magazine for the comedy. AC
Cords sold for as much as $499.00!! What was really funny to me is
that these people then plugged these cords into the wall where the
power flowed through lowly house wiring. I once posted a tongue in
cheek message to the high end audio newsgroup asking if anyone had
tried oxygen free copper house wiring, house drop and oxygen free
copper winding power transformer. Actually got serious responses!

Some of these folks also believe that little wooden disks the size of
quarters made of "mpingo wood" balanced on their equipment would make
it sound better by changing something or other.

Couldn't have said it better myself. BTW, there are many Amers who do work break in style. Of course, they hear complaints from those who prefer the roundtable style that "no one can get a word in edgewise!" To each his own.

FYI, there already is a unit named for Tesla. If I remember correctly, it
is magnetic flux or field strength.

I've found the gun crowd to be more friendly than many hams around here,
having butted heads 2 years ago with some radio club officer assholes
and prima donna ARES assistant EC gloryhounds.

Both are fun, relatively safe and expensive. But when they're no longer
fun, it's hasta la vista, Baby!

Right you are old timer...!!!

Blame it on America's hatred of the Metric system.(We are such Anglophiles!) Europeans have marked their radio's in wavelengths for years. My Dads's old Grundig still has the wavelength markings on the slide rule dial.

Europeans gave up only because America is still such a large market that they could not afford to let the Japs take over. But if you purchase a SW radio in Europe, you can still get them marked in wavelengths.

Things could be worse, I suppose... A MegaElizabeth could be the distance from the queens's thumb to her nose.

Sorry, did not mean to start a thread on this. Especially since it takes away room from more important topics such as whether hams should be armed... HMMM sure gives new meaning to being a "big gun" station...

Hi.

I have a Collins 51J4 receiver for sale. It has three filters installed.
The receiver is in good shape with all original parts and knobs.
All filters work excellent.
Price is $500 plus shipping from Toronto, Canada. I will ship by regular
registered mail which is as safe as Courier but lot cheaper (also you can
avoid the stupid custom charge across border).
If you are interested, please call or e-mail me.
TEL : (905) 803-0224 after 8pm before 11pm EST.
or at work (905) 707-4444 ext.3277 between 9am and 5pm EST.

I *love* it! <rotfl>

I need to swing by the bookstore and check out the latest issue..... I'd
forgotten just how funny some of that stuff really was.

You're serious, now, you believe some of the responses you got on the "house
wiring" bait were REAL?!? Incredible! I hate I missed that discussion. I
may go over to the usenet archive search engine and see if I can find the
thread. That's just too good..... Not really surprising, though.

>Some of these folks also believe that little wooden disks the size of

You can improve the audio with a larger speaker wire,
especially if you go to the Monster type speaker wire
compared to the zip cord type stuff. That's a fact. But
this power cord stuff is B.S.

Well, yes and no.

A lot depends on what you're currently using as speaker wire, and the impedance of the load, and the length of the run, and the source impedance of the amp's final stage.

If you're using telephone station hookup wire and running 50' from a BGW amp to a 2 ohm load....well yes, almost anything would be an improvement.

But, for a run of a few feet, from a tube type amp to an 8 ohm speaker, monster cable would be a total waste of money.

Of course, when you extrapolate the model out a little further things change a bit. If you're running a long run to a bank of 15" drivers and the amp has a nice low source impedance, then yep, you need seriously large conductors in your speaker cable. You do need to deliver quite a low impedance to that speaker array to be able to accurately control those heavy cone assemblies.

But it's not as simple as "monster cable is better in all circumstances" like the marketing folks would like to make you think.... :-)

Yup. I get a real kick out of some of the stuff I see the "audiophile"
crowd get sucked in to, but when I first saw the power cords advertised a
while back I thought I'd bust a gut laughing! For more of the same kind of
excitement, check out rec.audio.tubes. Some of the guys there are pretty
sharp and know what they're talking about, but much of the stuff is
psuedo-science and psycho-accoustic-babble.

I tried to get a service manual on the DX-302 from Radio Shack a few
years ago, and was told that one was never produced. They said the
schematic in the original manual was all that was ever made available.
I personally was never able to confirm the existence of such info.

Take it for what it is worth...

Hi Mark,

I am interested in a couple of 250TH's. They can be shipped quite
easily if well wrapped and padded in a peanut-filled box. How much are
you asking for them? Sorry, I am not on the way to Florida!

TNX es 73,

Message-ID: <35747596.32B3AA36@asu.uswest.net>
Source record: 104292

Somewhere recently I was told that Zenith and Sylvania 6JB6A's are 100% identical. Is this true? Specifically ,what I have heard is that tubes branded thus were in fact manufactured at the same plant. Can someone clarify this (mis)information please? More generally, what would the heirarchical ranking of the makers of the 6JB6 be? I know of Sylvania, GE, RCA, and Zenith. If I can't find Sylvania's what is next best, and next after that?

My son is into high end sound pressure level based car audio. This is
competition where the object is to generate enough noise at certain audio
frequency levels to reach 150+DB of sound pressure. It is amazing what
these guys will buy in order to get that last DB out of their systems. If
there was a $105 DC power cable on the market which promised that extra
DB, I guarantee it would be purchased. I have seen the ads for speaker
wiring where the copper is refined differently than normal copper in
normal cable. (i guess this is the oxygen free copper). How about fuses
which induce no voltage loss at $35 per?

This is not confined just to high end audio. When my kids were into
baseball card collecting I was actually told that vintage cards from the
50s which did not come packaged with bubblegum were worth more than the
same card packaged with gum from the same provider. Something about
residue from the gum......

Source record: 104360

(2) R-392 Receivers for sale. Both units function. (1) is pretty, the other is not. Neither has the orig. meter. One of the units (the nicer of the two) has a 'looks somewhat like' meter.

Hopefully, someone within driving distance of Knoxville, Tennessee can't live without the rigs removing the possibility of damage during shipping. I can email digital photos of the rigs.

Asking $250 for both rigs. We plan to visit Disneyworld in July. Anyone along the way?

Thank you, Mark WB4TGB - extrude@bellsouth.net

Bad idea. But a good idea is to buy my new product, the Magneto-Flux,
High Electron Field Density Transmitting Resonator. It is the best
portable HF antenna around. Made of a 3"D by 19'L piece of 24 karat
gold plated titanium-berillium-deterium tube, with a solid silver N
connector on one end and a Teflon plate on the other. Filled with a
patented space-time warping material, this antenna will break a small
hole in space and send your signal to another dimension and back thru
another hole to the other station, after you program the coordinates
in to the antenna with the included palmtop PC. This great product is
offered at an introductory price of only 8,019 deutchmarks. As it is
custom made and shipped from Germany, expect a delivery time of 12-20
weeks upon receipt of payment.

Yup... it has been my expirence that you can use anything (within
reason) for a tube amp, but monster cable tends balance the load on
solid state amps, and sounds noticebly better. Even old field phone

wire works fine with my bogen RP-60 and good speakers designed for a
1:1 damping factor.

You guys!... OK One more response... then no more... unless I got some BA's to sell...

(1) I was wrong. It was not 1934 but June 21 1941. Marconi Wireless Telegraph Co of America vs United States. Court ruled in favor of U.S. stating Tesla's 1897 Patent # 645,576 correctly describes resonance and is the basis of the claim that he alone (not Marconi) invented radio. (U.S. Court Reports Vol 320 pp 1-80)

(2) He only invented AND logic (Patent #723,188) and OR logic (Patent #725,605) the basis for all modern thinking engines.

(3) He died 10:30 P January 7, 1943. He was 86 years old. At the Hotel New Yorker... a 3rd rate dump in anyone's book. One of his helpers, Charles Hauser, stated "He had a large box or container in his room near the pidgeon cages and he told me to be very careful not to disturb the box as it contained something that could destroy an airplane in the sky and he hoped to present it to the world"

(Tesla, Man out of Time, Cheny, p-264)

Hours after his death, the FBI had sealed his room and confiscated everything in it. 80 trunks of lab notes, manuscripts and prototypes were cataloged in front of the hotel staff and taken away. These items were never seen again. The FBI has no official records that this ever took place.

To this date, the DARPA will pay up to $125,000 reward to anyone who can produce material that can be verified as having come from the hand of Tesla.

A number of good books and websites now exist about Tesla. -B

Cross-posted to: rec.radio.amateur.boatanchors,rec.rsadio.swap

National Radio Company, Inc. HRO-60 tuning strips:

Nice reproductions of the plastic tuning strips used in HRO-60's.
I have masters for all coil sets available.
These are the flat HRO-60 type, but I believe they will also fit
the HRO-50 series.

I have all of the following:

A Combination general coverage & band-spread type.
A Band-spread only for A coil set.

B Combination general coverage & band-spread type.
B Band-spread only for B coil set.

C Combination general coverage & band-spread type.
C Band-spread only for C coil set.

D Combination general coverage & band-spread type.
D Band-spread only for D coil set.

E/F Both E & F scales on same strip.
G/H Both G & H scales on same strip.
J J scale only on strip.

AA 27.5 - 30.0 MC Scale on strip.
AB 25.0 - 35.0 MC Scale on strip.
AC 21.0 - 21.5 MC Scale on strip.
AD 50.0 - 54.0 MC Scale on strip.

$10 each (specify type) 2.00 S+H per order, including 1st class
mail and a padded mailer...

Money back guarantee!
If your not happy for any reason, just send them back.

I also sell some HRO and coil-catacomb National parts.
e-mail or write for current National parts list for sale.

Source record: 104225

I've probably tested several thousand sweep tubes in the past 30 years,
mostly to "match" them up for RF finals.
I've found that the variation in tubes from a specific manufacturer
fall within similar variations from brand - to - brand, and failure rates
at aproximately equivalent levels.
Having said that, we are all aware that brand A 6xx6 is not
always identical to a brand B version. You may have to change a cap here and
there, so I would suggest getting several sets of a particular brand.
However, especially in the final years of sweep tube manufacturing,
there was a lot of cross-sourcing between the factories. So try to get
your tubes from a known purchase lot.

He's talking about RF power amplifier use, not audio power amp use.

The Sylvanias can be installed in Drake 4 Line transmitters without having to re-neutralize the finals. If you switch to another brand, you need to re-neutralized them.

It really does make a difference.

Also forgot to mention:
"Neutralizing" is a function required for adjusting between the differences between 2 tubes. This has nothing to do with the brand of the tubes, or the original brand of tubes.

3301. Re: ID Collins RT-865D/PRC-66

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-03 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <35758840.7B60C876@erols.com>
Source record: 104230

The Collins (contract) PRC-66B was (is) a MIL UHF ground-to-air radio used by ground forward air controllers (FAC). They run on a 24 volt battery. Most of the units surplussed come without the guard channel (234.0 MHz) receiver module. They put out about 2 watts from 225.0 to 399.9, again, the military aviation band. The modules are incredibly hard to maintain and require depot set-up jigs. They will accomodate secure voice adjuncts. The handset is the, now standard 5-pin, "new family", type. Our CAP unit has them for on-base and MIL coordination activities, but we prefer the VRC-24.

Dynamotor Supply DM/64a=12volt in 275v/150m out & on the same chassis #42486 (Stromberg Carlson) 12volt in 680v/210m out. There are also capicators & relays on the chassis. Not really sure what it was originally used for, but it was in the collection of a local boat anchor person before he passed away, so I'm sure he had a use in mind.

Its somewhat heavy, but will feel light as a feather to someone who is trying to power up some WW2 gear with the real thing..$40.00 Bob

I have both the VHF (100-150 MHz) and the UHF (210-410 MHz) Navy/FAA receivers for sale. I think I have the nomenclature correct? Both are working just fine (one of them has a preamp installed, I think... I used to live by ADW). Offers will be appreciated. Regarding shipping... well... these receivers, together, will effectively tether the Hindenburg (in a 40 knot wind).
Regards de K3HVG

3311. F.S. or Trade Crown International PSA-2 Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-03 00:00:00 UTC
From: CARL DOMANICO <cmd-dell@worldnet.att.net>
Message-ID: <6l4cl2$b60@bgtnsc02.worldnet.att.net>
Source record: 104240

Hi fellow Hams ..I want to sell or trade this amplifier for gear of
equal value...

Subject:
Crown Amplifier
Date:
Fri, 20 Feb 1998 10:47:20 -0500
From:
CARL DOMANICO <cmd-dell@worldnet.att.net>

For Sale: Crown International PSA-2X Professional Self-Analyzing
Stereo/Mono Power Amplifier....

If your looking for a Super-Powerfull,Highly Reliable, Amplifier you
came to the right place.....It's a Cream Puff, Mint Condition, I'm the
Original Owner. It's very Powerful, Rated at: 275 Watts RMS Per Channel
into 8 Ohms...460 Watts RMS Per Channel into 4 Ohms...700 Watts RMS Per
Channel into 2 Ohms. These are very conservative Ratings...more like
335 at 8 Ohms.... 640 at 4 ohms 840 at 2 Ohms...Per Channelï¿½.
It Weighs 57lbs/W Rack Handles. Dimensions: Height 7" Width 19" Depth 17
1/2"..*..I also have the Optional Balanced Input Module Installed, So in
the event you want to feed the Amplifier with a Balanced Input Signal,
from a Preamp or Mixer you can. Or your can just feed it with a Standard
Un-Balanced Signal Bypassing the Module...It also has a Built in Cooling
Fan, complete with Filter to keep Dust out...But it runs Cool Even at
Power Levels that would fill an Auditorium....If your familiar with
Crown International, Their Name has been Synonymous with High Quality,
and High Reliability, for the Past 50 Years....I really would rather
keep it than sell it...but since I've moved back into a smaller
apartment...I have no room...I've already sold all my other Stereo Gear.
The Amplifier is Ideal for a Super Home System, Commercial Sound System,
such as a School or Church, Perfect for those who Perform Disc Jockey
workï¿½
*Balanced Input Module has complete Adjustments for Compression ,
High and Low Filters, AGC Automatic Gain Control Threshold Adjustment,
Test Tone Signal Generator 50Hz to 20KHz. Extremely useful for System
Troubleshooting..
I paid $2300 New...I'm asking $1200 Firm, in Original Box, You Pay
Shipping

Get a load of what they say about speaker cables over on the
rec.audio.high-end group.

"I have to say, with neither great ears nor a great system, that there
is a definite difference in the sound from one cable to the next. And
being a cheapscape who happens to love music, I am one who would much
prefer buying lamp wire and 15-20 extra cds to buying the Cardass
interconnects! For sure, the better the system you have, the cleaner
the sound it will amplify, and the more you can hear the subtle and
not so subtle differences between wires and their breaking in. Before
the Cardasses I had Monsters and the change was like night and day. I
also tried Kimber Heroes with the Cardasses and though they were
wonderfully clear and dynamic the resulting sound in my system was
just too bright. For me the breaking in period was so prolonged that
I had almost decided to have the Cardass between my cd player and my
pre-amp and then the Kimbers between the pre-amp and amp so that the
Cardasses would warm the sound first and yet I still had my detail
which I felt was missing with the Cardasses alone. I querried Kimber
on the "re-finding" of the detail and was told that it was never lost

just re-revealed by the Kimbers. What was especially troubling was the lower registers which sounded rather "moony", but this quality finally disappeared from the Cardass and now I use them alone. Cardass says that their wires have to resonate for a long time so that especially the soldered joints transmit the sound properly. (Please excuse my lack of technical knowledge/verbiage.) Cardass even speaks of the cables needing another break-in, 5-15 minutes, if you move the cable so that the current will "relax" it again, and that there is even a break-in when you first turn it on even if not moved. Companies like Kimber and Cardass allow you to try out their cables with full return priveleges so you might try experiencing this yourself."

And another says: "I might easily come to think that accidentally kicking a loudspeaker cable would take the edge off the sound for a day or two."

They run on endlessly about how long it takes to 'break in' the cables.

I am in the wrong business, these people will believe and buy anything.

Good Evening. I am trying to locate a Manual on a RF Communications (
of the RF Harris group)SB-6FA SSB Tranciever. This is an old Tube type,
"Boat Anchor", that I am trying to restore. The tubes are missing and I
need to find out the numbers for a couple of unmarked sockets. Also
need the hookup for the SB-6FB Antenna Tuner.
Will gladly pay any costs for postage, copying, or purchasing of
manual. Thanks Don KB6GQA. Please respond by email Thanks.

3319. 3 Phases of Business

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-03 00:00:00 UTC
From: tsm@electrosys.COM
Message-ID: <c=US%a=_ecs%p=ElectroSys%l=WEBMASTER-980603192704Z-56@webmaster.eletrosys.com>
Source record: 104248

When grousing about UPS - Fair Radio, etc., etc, remember that there are 3 distinct phases of business:

Phase 1 - all company personnel are faster than a speeding bullet, leap tall buildings with a single bound, when asked to stack ping-pong balls, say to the customer, "yes sir/madam, we have ping-pong balls in stock, can stack them, and how high would you like them?

Phase 2 - company personnel now busy with business, the speeding bullet is just barely piercing a wood door, leaping small hedges instead of buildings, and with the ping-pong ball order, stating " we can order them for you, they are out of stock and it will take two weeks to get them, as to stacking them, I'm not in that department but will refer it to their Email address and they will have to get back to you with a stacking price . . . . . then

Phase 3 - the speeding bullet cannot pierce an over-ripe tomato, the leaping is non-existent with butt-dragging the order of the day . . . .RING - RING - RING - RING - "Im sorry but all lines and sales persons are busy at the present time, please leave your name, number, blood type, etc. and they will call you back shortly . . . . . long pause, perhaps 2 days, "what do you need?" I want to buy some ping-pong balls and would like them stacked 3 feet high" says the customer, the reply "we don't have them, never had them, what a bunch of crap asking us to stack them, stuff them up your "XXX" . . . hangup and silence.

All reminding me that UPS, Fair and perhaps dozens more now fit in this phase of business. Let us all concentrate on patronizing those business' that are either in Phase One or act like it. How many companies do you know that have a Phase 3 problem?

Source record: 104304

What amazes me about the fanaticism regarding audio, is the obscene amounts of money spent on hardware of questionable, at best, effect, and the absolute disregard for the acoustics of the listening environment.
I worked with a man in Texas, a musician of all things, whose sound equipment, was of the the most esoteric, and expensinve on the market. He had even gone so far as to have both the coils in his phono cartridge hand wound and physically and electrically balanced and matched to his preamp, and the connection wiring electrically balanced so he had absolute perfect level parity between channels, and by theory, superiour imaging. He spend huge dollars on interlink cables, and speaker lines to optimize phasing, imaging, and damping factors. But he had place all this equipment in a perfectly square bare room. It was dreadful. What was almost as astonishing, is that there were no chairs in the room, as he didn't spend anytime listening there. He would turn it on, and wander around the house doing what he did, with the music playing in the background. He never just sat and listened to the sound.
What a waste.

The truth is, and Julian Hirsch will support this despite his position in the audio testing universe, that once a certain level is reached in hardware performance, improvements in the acoustics of the listening room will make more audible difference in the sound than any improvements or modifications in the hardware.

Additionally, though no one will ever acknowledge this..recorded sound will NEVER sound live--the stated goal of audiophilia. It can't. by its nature, by the nature of the recording process, it can't sound live. It can sound mighty damned good, but never live. So most of the arguments in the hobby are moot before they are made.
As for squeezing the last db out of a system as though it mattered....the db, by its nature is a testament to teh insensitivity of the hearing sense to detail. The db is the minimum discernable level variation to the human ear. And that only in direct a/b tests. In the real world, its virtually impossible to tell one system from another by a db difference in level.

Most of audiophilia, and don't get me wrong I am a rabid and lifelong audiophile, but most of audiophilia is literally much ado about nothing.

3324. FS: Really great navy radios

>And you must have a tube amp for the best sound (6L6's, of course) -- which cannot be duplicated with BJTs or FETs.<

Actually, for all the prevailing glass audio bullshit and schitzoid greed, the above is entirely true. Anyone who has ever mastered the electric guitar knows very well the night/day (not the same as good/bad) difference btw firebottles & sand. People have frigged with sand for many years and conclusively proven that you simply cannot duplicate toob sounds with sand, no matter how identical they look on the scope. Of course, depending on your taste, the toob sound may sound like shit to you, but it will never sound like a sandbox. This does not mean that you may not vastly prefer sand yourself. Many of us can still reliably recognize the indescribable timbres of specific amplifier/guitar combinations of both kinds.

The AC supply is also the spkr enclosure; unlikely to find the rig &
supply separated unless someone has been using it mobile - and in
that case, there was also a 12 mobile supply (w/o spkr).

FWIW I need 2 of the smaller knobs for NCX-3 (or NCX-5 or Eico 753 in a
pinch) if anyone has a junker or spares.

Votes must be received by 23:59:59 UTC, 22 Jun 1998.

This vote is being conducted by a neutral third party. Questions
about the straw poll should be directed to the rec.radio.amateur.*
Working Group at <rra-wg@theporch.com>

Votetaker: Jeremy Billones <billones@primenet.com>

STRAW POLL Q & A

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV
process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?
Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which
initiated the last major reorganization in 1993) is the point-of-contact
for questions about this opinion poll. Principal members are Paul
W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg
member, Gary Coffman, KE4ZV, also endorses this opinion poll. this
opinion poll will be conducted by an unbiased third party from the
Usenet Volunteer Votetakers (UVV), Jeremy Billones

(billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborious and time-consuming, and perhaps unnecessary), we will conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV). During the poll, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I disagree with this newsgroup's charter or I believe that this newsgroup's existence should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the preceding 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the

readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If this opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, this opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)
rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are
principally used by readers of rec.radio.amateur.*, and their fates
would substantially be decided by any significant reorganization of the
rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.*
reorganization, rec.radio.cb is not included in this opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups
(except for rec.radio.broadcasting and rec.radio.info, which are
moderated). In addition, the following individuals were consulted prior
to this announcement (note that consultation does not necessarily
imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list
gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization,
former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV
process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group
_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Vote "YES" for all of the existing rec.radio.amateur.* newsgroups.

Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?

Vote "NO" for all (or all but one) of the newsgroups.

Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?

Vote "YES" for any newsgroups that you wish to remain unchanged, and
vote "NO" for any newsgroup you wish to have reconsidered in a future
RFD/CFV.

Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?

Since this opinion poll is for both the existence of given newsgroups
AND their current charters, you should vote "NO" for that newsgroup.
Again, this is a non-binding opinion poll simply to determine if current
newsgroups should be considered for modification or deletion, not a vote
to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by opinion poll. A
future RFD/CFV would have to be initiated to do this. You are, of
course, welcome to express your opinions concerning new newsgroups by
posting them to rec.radio.amateur.misc (*NOT* by E-mail to the
vote-taker).

Q: I have no opinion, what should I do?

You may wish to read the preceding 30 days of public discussion on
rec.radio.amateur.misc about this opinion poll to develop your own
opinions (go to http://www.dejanews.com/ and search for "STRAW POLL").
If, after reading the public discussion, you still remain undecided, you
may abstain from this opinion poll. You may do so informally by not
participating in it at all, or formally by explicitly voting "ABSTAIN"
for all of the newsgroups.

IMPORTANT VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One vote per person, one account
per voter. Votes must be mailed directly from the voter to the votetaker.
Anonymous, forwarded or proxy votes are not valid. Votes mailed by
WWW/HTML/CGI forms are considered to be anonymous votes.

Vote counting is automated. Failure to follow these directions may
mean that your vote does not get counted. If you do not receive an
acknowledgment of your vote within three days contact the votetaker
about the problem. It's your responsibility to make sure your vote
is registered correctly. Duplicate votes are resolved in favor of
the most recent valid vote. Addresses and votes of all voters will
be published in the final voting results post.

HOW TO VOTE:

Extract the ballot from the CFV by deleting everything before and after
the "BEGINNING OF BALLOT" and "END OF BALLOT" lines. Don't worry about
the spacing of the columns or any quote characters (">") that your
reply inserts. Please, DO NOT send the entire CFV back to me!

Fill in the ballot as shown below. Please provide your REAL NAME and
indicate your desired vote in the appropriate locations inside the ballot.

When finished, MAIL the ballot to: < voting@clark.net >
Just "replying" to this message should work, but check the "To:" line.

Examples of how to properly indicate your vote:

```
[ YES ] example.yes.vote
[ NO ] example.no.vote
[ ABSTAIN ] example.abstention
[ CANCEL ] example.cancellation

DO NOT modify, alter or delete any information in this ballot!
If you do, the voting software will probably reject your ballot.

If these instructions are unclear, please consult the Introduction to
Usenet Voting or the Usenet Voting FAQ at http://www.iki.fi/~jpatokal/uvv.

======== BEGINNING OF BALLOT: Delete everything before this line =======
.--------------------------------------------------------------------
| 1ST STRAW POLL: rec.radio.amateur.* reorg
| Official Usenet Voting Ballot <RRSP-0001> (Do not remove this line!)
|--------------------------------------------------------------------
| Please provide your real name, or your vote may be rejected. Place
| ONLY your name (ie. do NOT include your e-mail address or any other
| information; ONLY your name) after the colon on the following line:

Voter name:

| Insert YES, NO, ABSTAIN, or CANCEL inside the brackets for each
| newsgroup listed below (do not delete the newsgroup name):

Your Vote Newsgroup

I am posting this for a friend, who is looking for a volt meter that "talks"
to him... giving him in an audible voice what is being displayed on the
readout screen. Radio Shack made them several years ago, but does not have
them now. If anyone has one laying around they are not using, or knows of
any distributor/manufacturer that has them, please respond direct to him.
His email address is:
k7uc@juno.com
Thanks, Kay, N7KH

I've recently ordered from Fair Radio, although I used U.S. Mail. Less than
a week later, I had received what I ordered by UPS, and in good
condition. Almost everyone I know with recent dealings has few if any
complaints about their service. They have been one of the few sources
of surplus material that's been around for quite a while. I won't and don't
claim that they're cheap, but on the other hand, it's difficult to beat their
prices without a great deal of luck and patience.

3348. Collins crystals needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-04 00:00:00 UTC
From: kolner@kolner1.lanminds.com
Message-ID: <6l6vjp$i91$3@supernews.com>
Source record: 104130

I am looking for the following Collins crystals from the
CP-1 crystal pack:

BAND (MHz) CRYSTAL FREQ (KHz)

4.2-4.4 7355.00
12.0-12.2 7577.50
12.2-12.4 7677.50
24.8-25.0 13977.50
27.2-27.4 15177.50
28.0-28.2 15577.50

I am also looking for the military technical manual GTM-D-133 for
the G-133F receiver (manufactured by LTV).

If you can help, please email directly to kolner@leorg.ucdavis.edu

Thanks,

-Brian, K9SN, Moraga, CA

A company named "Extech" makes a multimeter with an rs-232 optically isolated interface. There are two models in Tucker's catalog, one that can store a bunch of data and one that can't. the prices are $399 and $199 respectively. Probably either of these units could be used by the sightless with a bit of programming.

Their business practice of putting out one catalog per year (not
including the fall supplement) is what causes the problem.

You can imagine the backlog that occurs immediately after the yearly
catalog is mailed.

Hi Mates,

Snipped:

I've been a Fair Radio customer since the middle 1950s. I usually buy a few things a year and look forward to adding another one of their catalogues to my collection although I kind of miss the dymo labels. Over these decades I have noticed one unifying force at FRS and that is frugality. This was brought home a few years ago when I asked them to send me an extra catalogue with my order. A week or so later my GRC-9 order showed up with the requested catalog enclosed.... The catalog was a recycled document as the original recipient had croaked and the post office had returned the catalogue to FRS with a big red stamp saying, "Addressee Deceased."
Perhaps with the passing of the dymo-labeled catalog FRS will be able to put out catalogs more frequently or perhaps expand their webb site to include the entire catalog as some other surplus vendors have done (Ford in Canada)
Cheers

Bob, KE6F

Ah yes! But I wonder how many hams bought the no-tune-fully automatic-center feed antenna tuner that was advertised for some time in some ham mags. I think ARRL bought one, had it X-rayed, found if filled with resistors with a DC resistance of around 50 ohms. Amazing how a termination at the center of any dipole will flatten out the VSWR at the expense of radiating power (not to be confused with the terminations at the end of aperiodic antennas such as rhombics and VEE wire arrays etc. Not exactly a 105 dollar power cord, but a $250 antenna mounted dummy load is close? Not that two wrongs make a right.
As many of the folks have noted, the audio dudes on the alleged high end of that hobby are a hard act to follow and one not to be missed. BTW I've seen speaker cables in some of the more rabid audio rags advertised at better than $16,000 for a pair of 8 foot lengths! Now that kind of wire should approach perpetual motion.
Some would say that this audio stuff is not germane to boatanchors, but a bit of coverage may ward of this type of mysticism from invading our own junk piles. However, 312B5's are getting close to speaker wire prices these days.. Hmmmmm.

I haven't ordered from Fair in the last 2 months but they shipped
promptly then. There was a small part missing from the radio I
ordered and when I told Phil, he mailed it to me the next day.
Perhaps you caught an employee who was leaving employment there soon.
Call and ask for Phil (owner) and ask him what the story is.

>How about fuses
>> which induce no voltage loss at $35 per?

What these brain surgeons don't realize, is that a fuse works by Joule heating as the current passes through the resistance of the fuse material. Ohm's law would then state that if there were no voltage drop across the fuse, there would be no resistance. Hence no Joule heating, and therefore, no functional fusing.

You can try, but you can't repeal the laws of physics.

>FAIR RADIO SALES CO JUNE 3, 1998

REFERENCE YOUR EMAIL REGARDING YOU ORDER.

PERHAPS THE REASON FOR THE SURCHARGE WAS PRESENTED TO YOU IN THE WRONG MANNER. WE ARE CURRENTLY BEHIND MORE THAN 7 DAYS IN GETTING ORDERS OUT. WHEN A CUSTOMER WANTS AN ORDER UPS-BLUE WE UNDERSTAND THAT HE IS IN A HURRY FOR SOME REASON. HOWEVER, THAT IS NOT A REASON TO BE PUT IN FRONT OF OTHERS WHO HAVE ALREADY PLACED THEIR ORDERS WITH THE EXPECTATION THAT THEY WILL BE TAKEN CARE OF IN THEIR TURN. WE USE THE SURCHARGE TO COVER THE ADDITIONAL HANDLING NECESSARY TO TAKE THINGS OUT OF TURN. THE SURCHARGE IS 15% NOT %50.

THE SALESMAN WAS JUST TELLING YOU OF THE OPTIONS. HE COULD OF TAKEN YOUR ORDER AND HAD IT WAIT ITS TURN AND STILL SENT IT UPS BLUE, BUT THEN, HOW WOULD YOU HAVE FELT?

I UNDERSTAND YOUR FEELINGS AND UNDERSTAND THAT YOU WERE IN A HURRY. PLEASE TRY UNDERSTANDING THAT WE HAVE TO HAVE SOME WAY TO FILTER OUT THOSE WHO REALLY NEED TO PLACE A RUSH ORDER AND THOSE WHO ALWAYS WANT TO BE FIRST.

PLEASE RECONSIDER YOUR POSITION. AFTER ALL, WE DID SERVE YOU WELL FOR SOME TIME. THERE ARE ONLY A FEW WEEKS EACH YEAR THAT WE ARE JUST SO OVERWELMED THAT WE HAVE TO DO SOMETHING.

SINCERELY

PHILLIP SELLATI

Message-ID: <1998060500344800.UAA08065@ladder01.news.aol.com>
Source record: 104144

I have for sale an excellent condition Johnson Viking Valiant. This was a factory built unit purchased by the original owner in 1959. It has not been on the air for about 5 years. It has no marks on the front panel, and the cabinet is in excellent condition, except where the original owner scribed his S/S # at the rear. All correct knobs. It does need a new line cord. Complete with original manual. Price $250., for pick up at Greenville, SC (I may be able to deliver to the Lancaster, OH area the week of June 14TH, where I'll be on vacation).

For sale Hammarlund HQ-145X, with clock. Both panel and cabinet are in excellent condition, and the clock and S-meter are not discolored. Receiver works fine, but controls could use a shot of lube. All knobs are correct. Complete with matching speaker (smaller version), and original manual. Price: $185 for pick up at Greenville, SC, or plus shipping charges.

What's the point?
Pro? Con?
I knew a ham in florida who worked in a radio parts store, and
I didn't know he was blind until I had bought a couople things
from him.

I saw him 3 times before it soaked in.

Hehad his test equip modded so he could feel the needles.

He climbed his own antenna tower.

He couldn't make comments on the color combo of his girl friend
or wife or whoever, I guess, but she didn't seem to mind.

Look into Handi hams.

As I understand the above, you wanted to get the benefit of dealing with a company everyone wants to deal, and you wanted to be put in front of the line. You didn't want to have to do anything to compensate them for their shift in paperwork.

Boy are you ever picky.

3399. Johnson Variable Cap. Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-05 00:00:00 UTC
From: avitko@harris.com
Message-ID: <6l928o$1bh$1@nnrp1.dejanews.com>
Source record: 104167

Does anybody know the capacitance range of a Johnson 167-33-1 air variable capacitor? I can not find a catalog or other published info. It is a differential type.

Thanks Al

For those into boatanchor test equipment :-) I've decided to sell this unit. (I've replaced it with a Wavtek 154.) For USD $40 (excluding packing and shipping) you get:

An all tube function generator (square, triangle and sine) covering 0.008 Hz to 2000 Hz. Cosmetically, mechanically, and electrically it is in good to very good condition. Also included is an original service manual.

I am reconditioning an old SX-99. I have all of the original knobs off except one. It is made of aluminum and is milled. The set screw is below the surface and the old hex slot has been very badly worn, almost round. I have a dremel tool and can ream it out then rethread. Any other ideas? This is my first shot at reconditioning.

Body handling: HTML body converted to readable text

Along the way in my travels I acquired an interesting gadget that will serve a useful purpose providing I can find out a little more about it. This unit is a rack mounted affair with a 312B-4 like watt meter/speaker on the left side.

This unitis obviously manufactured for the military as the I.D. plate on the antenna tuner states: Coupler-Monitor Type 180U-2. MFR.: 13499 PT No. 522-1398-00. Contract AF 30(635)-18590. SER AF60-111. The data tag states also that 115/230 VAC is required. But what is the AC voltage for?
Was this equipment in the employ of the Air Force?

On the right side there is an antenna tuner, possibly a repackaged 180S-1. On the rear panel there is an Amphenol connector with 16 contacts, a watt meter coupler, what appears to be a coax switch (possibly electrically actuated), several type N connectors and a 28VDC antenna relay. Figuring out how to lash it into a station setup appears to be straight forward but I am curious as to how this unit was originally incorporated.

On the antenna tuner there are four controls: a switch for antenna impedance (high/low), a switch for switching loading capacitors, a variable capacitor loading control and a variable loading coil control.

The loading coil control knob is missing. I am guessing that this knob is similar to the knurled knob used on the 180S-1 antenna tuner. I have the numbered skirt with a gear attached to it so I guess that all that is required is the knob. I suspect that the missing knurled knob has some type of an interface that will allow the numbered skirt to rotate in conjunction with the loading coil shaft.

I am curious as to the power capability of the antenna tuner, the watt meter indicates 1000 watts so is it safe to assume that the tuner is similarly rated?

Can anyone with any knowledge of this critter help out with specs. or possibly a manual? I would be interested in finding out more about this unusual piece of gear as well as obtaining a replacement knob.

Any feedback would be appreciated.

I think we should get rid of that Hertz nonsense and go back to cycles--after all, that's what we're talking about. Cycles, kilocycles, megacycles, gigacycles all make alot more sense than talking about Hertzes.

It was AM screen modulation with a super-regen. receiver. Very
sensitive but broad banded. I have one that I modified to use
an industrial version of the output tube that I was able to run
7 watts compared to the 5 it was rated. I also added a cascode
Nuvister RF preamp to the front end.

>round. I have a dremel tool and can ream it out then rethread. Any
>other ideas?

Boy does this sound familiar. Usually when the hex keyhole fitting is that badly worn, someone has used the wrong tool to tighten the screw. The screw is not difficult to replace..in fact, it is a quite common size and many electronic stores carry this size, mostly in blister packs, bundled with a dozen other sizes. The cost is real low, too. But back to the main issue.

Rather than drill out the existing screw, which may damage the existing thread material unnecessarily, find a very small flat blade screw driver. The edges on the blade need to be very sharp. And try turning it in the badly rounded hex hole. There should be a point where it binds. Try several sizes until you find one that can just barely find a way to fit in the widest spot in the reamed hex hole. This will be the spot where the screw driver binds the most. Tap the screwdriver into the hole to set it. And then with a pair of pliers or small vise grips for leverage, SLOWLY turn the screwdriver until you hear or feel the screw 'give'. Then just back the screw out and throw it away. Replace with a hardened screw and you're home.

This can be tedious and delicate work, but it does prevent thread damage, and possible cracking of the bakelite knobs on my Hallicrafters.

A hint of BreakFree, or graphite based anti-seize will prevent stripping the new screw in the future.

I seem to remember that screw being rather stiff to remove even when my original SX-99 was brand new. You should be able to find a small "easy-out" at store that sells tools and the screw can be removed with that. You might need to grind off the end of the easy-out to get it to fit just right.

ALAN
Couple of ideas for this problem.
1. Sometimes heating the knob collar
will help. Insert a hex key to keep the
screw slightly cooler. Expansion of the
collar might make it work.
2. Try a Liquid Wrench soaking
3. Go oversize with larger US or Metric sized
to get a grab on the screw after you've tried
the above. The dremel tool will help here. Keep it cool
as to not lose the hardness of the allen wrench.
4. Super glue (gap filling) the wrench/screw together
sometimes that's enough to crack the seat.
5. The other ideas re drilling out would be a last
resort in my experience. Real hard to get into the
hole with even the smallest easyout.

Good luck
BTW when you've succeeded use an anti-sieze compound
Aluminum and steel don't mix well.

Sounds like Standard Operating Procedure to me. My club just purchased a Henry Radio amplifier. They wanted it quicker than the standard 2 week wait so we had to pay a 15% expedite fee. To make that worth the money, we also paid for 2nd day air.

There were no complaints from the members and Henry kept their other customers happy. Smart business sense.

Hi all,

At the last Swap Meet, our club put a $5 price on a Collins 302C-1 wattmeter. So, naturally, I bought it! Now, I KNOW this meter is worth more than $5 (Surplus Sales of Nebraska lists the movement, alone, for $85).

Let me know what it's worth and maybe I'll put it up for sale to one of you KWS-1 owners. The meter does work but needs slight calibration. Thanks.

Radio Randy

Dear BoatAnchor Captains,

I am looking for a Schematic and alignment instructions for the Hallicrafters S-40A or information as to where I might find them.

I just recently got a 'new' S-40B (the S-40A was my novice rig) and was noting some recalled differences. The S-40A as I recall, had a chrome metal speaker insert where as the S-40B is all the same color. Is my memory correct (it has been over 20 years!) and are their any other differences between the 'A' and 'B' versions.

I am also looking for the power/tone switch (DP4T).

Any help with any of these would be greatly appreciated an appropriately rewarded.

3443. Heathkit VFO For Sale $95 or B.O

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcfri$d2k$1@nnrp1.dejanews.com>
Source record: 104080

Heathkit VFO HG-10 with manual in good cond. for it's approximately 40 years of use. The band switch will require lubrication as it is stiff from lack of use. The other two controls are fine. The octal plug you will will need to supply.

May be viewed at:

http://www.geocities.com/Athens/Forum/3417/VFO.JPG

There's some minor scratches on the top of the unit. If you look closely, you can see the paint is worn at the upper right and left corners of the cabinet. This is where the sheet metal was formed at the bends to make the cabinet. A nice feature of this model is that there's an inserted letter with manual from Heath indicating that there was a capacitor change during if manufacturing run to minimize chance of drift. The letter is reproduced with the photo above.

$95 or best offer plus shipping costs.

For a full description with pictures and specifications for the HG-10 see at the following web URL: cyberventure.com/heathkit/ham/hg-10.html

3444. Hammarlunds For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcg5odhq1@nnrp1.dejanews.com>
Source record: 104081

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept for units that old. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x:

http://www.geocities.com/Athens/Forum/3417/HQ-140-1.JPG

Purchased off the gentleman directly who owned it.
He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $195 or b/o plus shipping costs. Will consider a good condition & complete Hickok USN or USAF AN/118B cardmatic or TV2-C for a swap for the 140-X.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-1.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-2.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only things I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced and the fine vernier adjustment will need a dial string (a.k.a. some folks use dental floss). Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself. From the photos you can see there's some scratches etc., but the unit would be considered in excellent physical cond. for its age.

HQ-170 & Matching speaker $325 or b/o plus shipping.

Thanks.

3445. Johnson Viking Challenger For Sale $95 or B.O.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-06 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6lcgf4dmr1@nnrp1.dejanews.com>
Source record: 104082

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual. Price reduction--$95 or best reasonable
offer plus shipping.

Some nice folks advised me that this unit does not have the
original Johnson stock meter setup, but was upgraded by the owner
at one time from examining the meters in the photo.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider $95 or best reasonable offer plus shipping.

Thanks.

From: Karlan@juno.com
Message-ID: <6lcgr7eci1@nnrp1.dejanews.com>
Source record: 104083

Collector Premium Quality Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA., U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit is like new and is in amazing condition! See Photo. It even has the original box, packing and manual with it. One lucky person apparently sold a unit for $325 in this super condition and I have seen them for $65 as well in decent condition.

Candidly, this meter is priced for either a collector or someone who wishes to pay a premium to have one in new extraodrinary cond. in the original box and not the operator who just could use a meter. Again, similar models in lesser condition can be had for well under $100 if simple utilitly alone is the objective.

Will take $160. Due to the amazing condition of this unit cannot consider offers less than $160. This is a rare find. Will also consider some type of swap for a Hickok Navy or Air Force military 118 cardmatic tube tester or TV-2C.

Thank you.

You need two receivers, or a special receiver like the elusive
Hallicrafters DD-1, that had two front ends, two IF strips and two detectors
sharing a single local oscillator.
BTW, I currently have my R-390 and R-390A running space diversity. Sure
works to eliminate selective fading.

From: Steve Murphy <k8vo@flash.net>
Message-ID: <6lcifsojf1@excalibur.flash.net>
Source record: 104090

Yeah, to a point you're right. Tubes and various transistors do have tangible differences, particularly when they're run to distortion. Many people, including myself, prefer the tube sound. But just because I like it better doesn't have anything to do with tubes producing a more accurate reproduction of the source signal. In fact, the current mid-priced SS amplifiers have much lower distortion figures than most of the high end tube stuff.
Like I said, I like the sound of a screaming tube amp. I also use tone controls to contour the audio passband to my liking. Both are adding distortion to the signal, so shouldn't be confused with fidelity.
I am in total agreement with you on the guitar sound, though I am far from having mastered the instrument. I have a Strat and an SG and both sound great when run through my homebrew 12AX7/12AX7/EL34 amp, especially when pushed to the threshold of distortion. I love that semi-clean tone!
Guess this has little to do with boatanchors, tho! Forgive me!

Would like to sell the following items as a package, may consider separating the RV-75 for the right price.

- Drake TR-5 transceiver, excellent operating (10/10) condition / very good cosmetic (9/10) condition. Includes optional 500 Hz CW filter.

- Drake PS-75 power supply for TR-5, excellent operating (10/10) condition / excellent cosmetic (10/10) condition

- Drake RV-75 remote synthesized VFO for TR-5, excellent operating (10/10) condition / excellent cosmetic (10/10) condition

All manuals included. .JPG photos available on request.

$850 firm for all items above, plus 50% of FedEx COD shipping charges (probably around $890 total). Gear is available for inspection and/or pickup in Austin, TX by any interested parties. Please note spamproof return address when replying by email.

Source record: 104094

The SX-115 suffers greatly from strong nearby inband signals, a shortcoming not found in the 75A4. I can recall two occasions on field day when the SX-115 was retired from one of the operating tables and the standby 75A4 pressed into service. The SX-115 is harder to find because most people who could afford it when it was introduced quickly found out about this problem and there were not many sold.

3462. Old Test gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-06 00:00:00 UTC
From: sts@ac.net
Message-ID: <3579c1b7.1123381@news.ac.net>
Source record: 104099

Hello,

We have recently purchased an estate of a silent key that was also a TV tech in the 70s. Below is a list of some of the test gear that came from that estate and is for sale. Prices do not include shipping. This equipment has NOT been tested but looks good and was apparantly working when the gentleman retired. I think we have the orignal manuals for most of this gear.

SAMS Auto radio service manual series(stack about 4' high) from #AR24 up. We have not cataloged these so there may be a book or missing in the series but a lot of books there. $75.00

AMPHENOL COLOR COMMANDER Model 860 Pattern Gen
Looks brand new. $15.00

CADRE - CRT COMMANDER Model 855
Looks new $15.00

SENCORE BAR GENERATOR, COLOR Model CG10
Looks new $15.00

CENTRAL ELECTRONICS Model RE-1 Multiphase CRT
rejuvanator $15.00

HEATHKIT Model IG-62 Bar-Dot Gen. $10.00

RCA CRYSTAL CAL./MARKER GENERATOR
Model WR89A $10.00

RCA MASTER VOLTOHMYST Model WV87B $10.00
This is the very large version that you can read from across the room

RCA VOLTOHMYST $5.00
Smaller 4" version

HEATH Model IG72 Audio Generator $5.00

Purchase the whole thing and we'll throw in some smaller test goodies and split shipping.

I have for sale a Drake T-4XB with AC-4 ac power supply and Shure 444 desk mic all in good working condition for $225 obo shipped. The front panel is in excellent shape. The chasis has some small corrosion spots (definitely no rust bucket) and the cover is in very good shape. Output is good on all bands. I am selling it because it has been on the shelf unused for too long. Contact Brian at 425-745-8607.

Hello, Ed!
contact:
Max-Gain Systems
221 Greencrest Ct.
Marietta, GA 30068
phone: 770-937-6251
e-mail: mgs@avana.net
WWW: http://www.aaow.com/mgs/
---------clip from webpage-----------
Bristol or "Spline" wrenches -- We stock sets of the 9 most popular
sizes of Bristol or "Spline" wrenches (sometimes
erroneously called "Bristo" wrenches). These wrenches are VERY
difficult to find, and are necessary to work on a great deal
of military, Collins, and Hallicrafters gear, among others. Brand new
9-piece sets are $13.95 plus $1 shipping/handling in US
and possessions, $2 shipping/handling worldwide. This set includes the
smallest Bristol wrench made...a must for many
applications!
---------------clip from webpage----------------
I just bought a set. The people at Max-Gain are great! And the service
is fast.

What it gets and what it is worth are two different things. I paid $185 for mine NIB two years ago.

Incidently, this concept of "collector quality" is an interesting marketing tool, but hardly a realistic guage of quality. One of the things I have done in the last 10 years is find and restore some of these rigs for museums throughout the country. Not one of them has paid more than $300 for anything, including Collins, Hallicrafters, and Hammarlund.

Speculator quality is a more appropriate term. And more in like with price.

Normaly you need two receivers but there are diversity adaptors that
switch two antennas on one receiver depending on which has the strongest
signal at the moment. Plans in old QST magazine, sorry can't find it
right now. 1950's somewhere.

I have 2 HQ-100A receivers. To my surprise, they are different!

One (newer version?) says "Hammarlund HQ-100A" in large letters. The other just says "Hammarlund" in large letters, and has a small plate reading "HQ-100A" above the BFO control.

The newer version has solid state diodes instead of the 5Y3 rectifier tube. However, the octal socket is still there, marked "J1" on the tube location chart.

On the rig I have, there is an octal plug in this socket, with a bundle of wires terminated in black electrical tape.

My manual is for the 5Y3 version, and makes no mention of J1.

Is this for TR switching? Accessory power?

If anyone has a schematic or pin-out diagram for J1 on an HQ-100A, please let me know.

73,

Christopher

Yeh!

And while we're at it, what about current? It's electrons per second. What's this amps bullshit? And voltage, too. Who gives a rap about some Italian named Volta? We all know its just newtons/electron, oops, better make that poundals per electron.

So now that we've got this straightened out, Watts and Ohms is a piece of cake. They are just poundals per second and poundal-seconds per electrons squared, respectively. Now, where were those square electrons.....?

Yours in solidarity,

Gray

3489. RACAL Syncal 30/TRA931X help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-07 00:00:00 UTC
From: Tom Norris <badgerNOSPAMMAGE@telalink.net>
Message-ID: <ihye1.3287$ES5.3917178@news3.atl.bellsouth.net>
Source record: 104020
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,uk.radio.amateur,aus.radio.amateur.misc

Recently aquired a RACAL TRA931X in good shape.
Itincludes the vehicular rack, AC power supply MA949,
vehicular supply MA937, remote control unit MA985B
and a few other accessories. Seems to work and work
well within the specs published in Janes.

Need some help though --

* Need a source of a service manual or at least a partial copy.
Even a partial schematic would work. Especially have an immediate
need for the the section of the schematic that shows the power switch
as the unit has a broken wafer.

*Need pinouts for the power supply and audio connectors.

*Need schematic or at least a general description of the MA937
vehicular supply. Janes says it is a "12/24 volt" power supply.
I cant seem to get mine to actually power the radio.

*Now for the real challenge for those that have access to inobtainium.
I need the webgear and haversack, as well as the battery case and perhaps
an antenna to make the set itself "portable". Basically to make it portable,
I
just need to unsnap it from its frame, snap a battery pack on the bottom,
and
go. Hard to do this without a battery case.

This radio, for those who havent seen one, is about the size and a bit
lighter
than a PRC-74 or PRC-109 US set. Nice radio actually, has a very good
receiver
that will go down to under 100Khz (so I can DF nondirectional beacons....),
and
has selectable power out of 2 or 20 watts, though my wattmeter says it can
actually
do 25-30 peak. So, no, it is not a boatanchor per se, being a 1980's
manufactured
lightweight set. I posted to the BA group cuz there is a better chance this
might be
read by folks that collect "green radios."

Any help will be greatly appreciated. And please, email me directly rather
than to
the newsgroup -- my news server is spotty at best and doesnt pick up many
new

posts.....

3490. Re: The truth about gun owners

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-07 00:00:00 UTC
From: "Dean, Greg" <N9NWO@GTE.net>
Message-ID: <6leccm$rf6$1@gte2.gte.net>
Source record: 104021
Cross-posted to: talk.politics.guns,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc

Gun issues have nothing to with radio. We have our own political
problems. The only thing that you are showing us is that radio
users are under the same attack as gun owners. Most likely
will cause us to unite with them.

I would say that, however, the policies of the Left have had more
to do with decline of the West (to include the US) than just guns.
Gun violence is a symptom of deeper problems in our culture. In
countries such as the UK and Canada they have had to also ban
knives and martial arts tools. Amateur Radio could help by giving
the youth a hobby that could fill the emptiness in their lives.

3499. HELP - Burned-on dust

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-07 00:00:00 UTC
From: Jack Hardin <jhardin@hal-pc.org>
Message-ID: <357ACBA1.5450@hal-pc.org>
Source record: 104030

What's the best way to clean burned-on dust off the chassis and tube covers of old radios? Over the years dust has filtered through the perforated tops and has gotten baked on by the heat of running the radios. I can just wipe off the glass tubes, but the dirt on the steel and aluminum is pretty stubborn -- any ideas appreciated.

Jack

--
I would like information or equipment that will allow me to
use my VHF/UHF, possible HF equipment from my Touring motorcycle.
A Noise canceling microphone system with speakers that will produce plenty
of volume next to my ears. I Have BMW Police motorcycle not a GOLDWING.
I would be willing to build this equipment if I had the proper impedance
matching concepts
with a few other skills. So far I have not been able to develop a
amplifier that
I can keep the full range frequency response needed for the speakers.
I have not been able to locate speakers that will handle added wattage
I may need either. Electric microphones I have produced good sound
but need noise canceling at higher speeds.
The Motorcycle is set up with 700watt charging system and noise suppression
for
Police use.

Your ideas and Pre manufactured equipment that I may implement into a
helmet
is what I need.

I hope to use this motorcycle in local community service events along with
personal
touring trips.

I AM ALL EARS? What do you have I can use? What can you teach me?

Thanks,
Jack Kovar

>
Bill,

I think I can help you with the manual addendum. This is about a 4 or 5 page document that walks thru the steps of modifying your Valiant to plug in the adapter. Your rig may/may not have been converted by a previous owner. The mods are straight forward and involve adding coax to various points and an SO-239 plug on the apron.

I'll look for a copy and fax it to you. Glad you finally found your adapter! Hope you got the power supply with it.

Hooey! If a company can't keep up with their orders they hire temporary help
to tide them past the crisis - not surcharge a customer for jumping the line.

Doug

Gun owners, Amateur radio, private pilots, and the internet are under the same attack for the same reasons : they are activities that lessen government control. Radios have always been feared by governments more than guns. They provide a means of getting out news the government doesn't want published. Make no mistake, free speech is right behind guns on the hitlist.

Well, it seems to me it was worth EXACTLY $5 to you and your club. So
your question has been anawered.

Given that $5.00 is the value established, I'll be happy to give you $10
for it. That's 100% profit -- quite more than enough ....

>Hooey! If a company can't keep up with their orders they hire temporary help
>to tide them past the crisis - not surcharge a customer for jumping the line.

No, actually, they surcharge the customer for jumping the line.

Hiring temporary help is a dicey business for anyone. First, the temp help has no interest in the business. They have no vested interest in the satisfaction of the customers, nor to they have vested interest in the image of the company.

Secondly, the temporary help has, at best, limited knowledge of what is, in the case of Fair Radio, a specialty business. Temp help cannot be expected to have working knowledge of inventory, nor working knowledge of the products for sale.

Thirdly, temp help is just that: temporary. Customers engaged in commerce with a specialty company have proven time and again that they do not continue to do business with reps that they cannot return to. Car dealers are beginning to understand this, hence the number of "ServiceTeams" to which customers are assigned at many dealerships.

But if you still insist on the Temporary Help theory, I invite you this Christmas season to wander into any mall and experience both the knowledgeable and customer oriented service at any Radio Shack. There's your theory in practice.

As for the customers who insist on a "Me First" privilege when ordering. For those whose orders are already in place, this is an effront to their loyalty and their business. And a surcharge for handling these "special circumstance" orders is a fair and equitable way to weed out those who are either in a time crunch due to their own procrastination, or are simply not patient enough to wait their turn. This surcharge is a time honored practice, and dates back to the days of Montgomery Ward's first catalog.

Source record: 104054
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.swap

I have a very nice, CCA VGC, winged, KWM-2, S/N in high 11,000's. (Front panel / cabinet appearance is more like CCA Excellent.) Very few, almost-undetectable marks on cabinet and front panel. Chassis is very clean. Crystal codes are mostly 6-62.

The radio was just gone over thoroughly by Bud Whitney, K7MRT. He replaced several weak tubes, several caps and other minor parts, and thoroughly aligned and tuned it. When I bought it, the original RCA antenna plug had been replaced with a BNC. Bud exchanged that for an original ceramic RCA. The rear panel, immediately beside that plug shows some scuffing. Wired-in relay has also been changed. The radio works perfectly on all bands with full output. PTO tracks great end-to-end.

I'm asking $650, which is a bit less than I have in it, but will entertain reasonable offers. Add $20 for UPS surface shipping. Please reply by email.

73... Ed, W5EJ

I need the auxilary coupling switch and square four prong special capacitor behind it. This is a very weird cap that's attached to the chassis with one screw. If you attempt to unscrew it DON'T do it from the bottom. That screw holds all the wafers in place. Do not disturb that or it's junk. Take it out fom the top of the chassis. There are other things on the top to unscrew in order to get to it. If anyone has a junk parts rig I would buy that instead. Thanks 73 Chris VE3NGW/W4 FL.

Source record: 104058
Body handling: Binary attachment payload not displayed: vcard.vcf

I bought a Mende radio yesterday at a flea market. My questions are:

1) How do I find out what model it is. It has two speakers, about 7 buttons on the front, two knobs, and a slew of German/European cities listed on the plate. I can't find any numbers that look like model numbers. On the back it says NordMende. That's about all I can think of from memory. (It is at home, I am at work).

2) The only thing I can find wrong with it is the string that moves the tuner and the little indicator is off. Where can I find out how to route the string?

TIA.

3533. Neutralizing Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-07 00:00:00 UTC
From: dxguy@earthlink.NET
Message-ID: <3579FF1B.7C91@earthlink.net>
Source record: 104106

Someone remarked that neutralizing has nothing to do with the tube & is used only to match two tubes (I think that was the argument - if my memory is OK).

Neutralizing is used in triode circuits to "neutralize" the positive feedback associate with the tube's Grid-to-Plate capacitance. This capacitance provides positive feedback from the plate (amplified signal) back to the grid (input of the circuit), and will cause the stage to oscillate at some frequency (usually high freq, and called "parasitic oscillation"). Single tubes must be neutralized, as well as push-pull stages, but has nothing to do with the fact that one or two tubes are used, per se.

The trick in neutralizing a stage is to feed an equal amount of signal 180 degrees out of phase back to the input to cancel the positive effect of the Cgp. This DOES vary from tube to tube, and from manufacturer to manufacturer (of the tubes, that is). Most folks now-a-days don't worry (or even know much about this) since the advent of tetrodes with screen grids (which isolate the input/output circuit) and grounded grid configurations which need no neutralization (normally).

I have the following J.W. Miller coils for sale, $2 each . .

(1) C-5495-RF 5.5 - 18 Mc. RF Coil
(2) C-5496-C 5.5 - 18 Mc. Tapped Osc. (455 Kc.)
(2) B-5496-C 1.7 - 5.5 Mc. Tapped Osc. (455 Kc.)
(2) X-5496-C 120 - 420 Kc. Tapped Osc. (455 Kc.)
(1) X-5495-C 120 - 420 Kc. Standard Osc. (455 Kc.)
(1) D-5496-C 12 - 36 Mc.. Tapped Osc. (455 Kc.)
(1) B-5495-A 1.7 - 5.5 Mc. Antenna Coil
(1) B-5495-RF 1.7 - 5.5 Mc. RF Coil
(1) B-121-A 2.1 - 6.3 Mc. Antenna Coil
(1) 1448 FM RF Coil
(1) 2007 B'dcast Antenna Coil (transistor use)
(1) 20-RF B'dcast Antenna Coil (general use)
(1) 1446 110 - 235 Mc. Osc. Coil

(2) 12-W1 1500 Kc. Input IF Transf.
(1) 12-W2 1500 Kc. Interstage IF Transf.
(2) 112-W1 1500 Kc. Input IF Transf.
(2) 112-W2 1500 Kc. Interstage IF Transf.

I'm also looking for (1) 512-C1 IF Transformer and (1) A-320-RF Broadcast coil, willing to do a trade if you have those.

thanks,

Hello Jack and Others:
I have had wonderful results with using varous waterless hand cleaners like the trade name "Gojo" for cleaning BA's without any damage. There are two basic styles of this cleaner, one with some grit in it which may be pumice...you don't want that one...get the smooth type. Just wipe some on with a rag, let it sit for a minute or two, then wipe off with a clean rag. When all is said and done, use some water and a small amopunt of deteregent to make sure that no residue is left from the Gojo and you're away to the races. I have been using this method for several years without any trouble on various surfaces. Give it a go, you'll be surprised at how well it works. Reagards to all.

Greetings, troops-

Are YOUR dynamotor bearings greased?
Just a final reminder of the 2nd annual Vintage Field Day, June 13th and 14th. The rules are simple and modeled after those of the first ARRL Field Day in 1933.

The event starts at 7 PM local time on Saturday, June 13 and ends at 7 PM local time on Sunday, June 14.
All participating stations must use boatanchor-style vacuum tube-type equipment and only stations actually operating portable/mobile away from home addresses are eligible to subnmit scores. The usual info should be submitted with logs- Description of equipment, antennas, power sources, etc. In keeping with the 1930s-era, modes of operation are CW and AM only. And no, you can't operate on 5 and 2-1/2 meters- but 6 and 2 are fine :)

I want to add that while home and "modern" stations aren't eligible to submit logs, all are extended a sincere welcome to participate.

I want to emphasize- this is NOT a contest per se, it's a chance to meet old and new friends alike and the main goal is to have fun.
I'll be on with the ART-13/ATC and BC-348 or Gonset G-76..

Photos are solicited...Logs and comments by July 15 to:

What I do is to use an air compressor and needle point blow gun. It gets out most of the dust and dirt. Because we live in the Southwest, the Hantra virus is a real threat so this must be done outside.. (hopefully, down wind!).

Sometimes, if the dirt is too stuborn, I take out all the pastic parts, tubes, meters, and dials off and wait for the XYL to go out... then just pop it into the dishwasher.

It comes out squeaky clean. Then immediately dry with a hair dryer to keep rust from starting and let it set for a few days.

I've done this hundreds of times and the only problem I came across was a shorted power transformer on a Heath supply. This was my fault as I quickly dried it and did not wait a few days. There was still some moisture inside the shell.

Just don't let the XYL catch you....

PLEASE REPLY TO DAN KEEFE, KS6Z. HIS E_MAIL ADDRESS IS
KS6Z@SPRYNET.COM THANKS! Now I'll quit shouting. :^) -cb

Dan is selling one more radio on behalf of the Vista Center
for the Blind, an Atlas 210X transceiver. Asking price is $200.

Comes with a console unit including speaker, hand mike, etc. No CW
filter. Excellent condition both cosmetically and electrically. Dan
uses it every week or so and it works great.

The Atlas is all solid state, has built-in power supply and
generates about 100 watts out on all bands and is a great radio
for a beginning ham.

Doug berated Fair Radio Sales in a series of posts expunding his beliefs -

FWIW - and I feel probably of little import to Dougs attitude; I am satisfied
with the customer service descibed by him for Fair Radio Sales.
1. The company rep told him what the turnournd time for processing the order
would be. It was a reasonable time.
2. The rep noted that he was asking for expedited shipment and took the
extra step of letting him know that the overall time anticipated for the
order to reach him might not justify premium shipment; but that if he
wanted to receive expeideted handling. then they could help him.
3. They quoted a reasonable expidite fee for the added service.
4. They are conducting business in a reasaonalbe fasion and not providing
"good ole boy service for one customer over others"
5. First In, First out is good policy for them to follow.
6. FWOW . I was at one time the Customer Service Manger for Collins Radio
Company and we had the same sort of policy, as did/do most other compnies.

Bob,

Went to a hamfest this past Saturday and saw a vendor there selling HF
dipole antennas for 80 and 40 meters consisting of either 128 or 64 feet
of copper wire, a pair of plastic end insulators and a 1 to 1 balun. The
asking price was $198 for the 80 meter version and $178 for the 40 meter
version. I asked him if that included installation and final tuning at my
station site and he seemed slightly annoyed. Maybe these antennas had the
oxygen free copper and the power enhancing 10 db gain balun?

After reading all the p[osts in this thread I think I am in the wrong business

I have used distilled water on paper towels. Placed soaking towel on grime
and left it for an hour or so. Then wiped, sprayed more distilled water,
wiped, etc. It's slow, but effective and seems to cause little harm. wolfie

Thanks for the tip DeWayne,

I had the opportunity to buy a set of Bristol wrenches at Fry's Electronics (everyone in California knows Fry's). They were made by Xcelite and were excellent quality, and came in a very nice case. The price, as I recall, was $37.95. I'm glad I waited for your post -- about one-third price through these guys. Now I just hope that they include the specific sizes for the R390A.

> to do next?

> KH2PZ/7

I'll assume that when you replaced all the electrolytic caps, that you
included any interstage and output coupling caps.

Have you done any signal tracing to see if at least some of the individual
gain stages are behaving reasonably? Given the late '60s - early '70s
vintage of your amp, there ought to be a couple of discrete transistor gain
stages before reaching the driver & output devices. My recollections could
be in error, but it still may be useful to feed a 1 kHz sine wave to the
amp & look w/ a scope.

How do the quiescent DC voltages around all the transistors compare w/ the
voltages in the schematic? Even if the rail voltages are low, base to
emitter voltages should still check out as reasonable, and there shouldn't
be any instance where collector to emitter voltages are near zero. It's
possible that one of these devices (possibly an output transistor) is dead
& trying to act like a short or is biasing adjacent devices out of whack.

Are all the power supply rectifiers intact? You might want to check 'em.

There may also be a workmanship issue (e.g., marginal solder joint)
associated w/ this problem, so it wouldn't hurt to do an overall inspection
(I'm assuming you weren't the original owner/builder of the AA-18).

Just my $0.02, & good luck -

TGB

I found a 230 in a pawn shop. Don't know yet whether it works or not. I can see that it is a tube type, probably from the late 50's or early 60's. It may have also been available as a kit. I'm just wondering what it might be worth. (they are asking $150.00) Is it known as a good receiver? Is it single or double conversion? To what would one compare it? A DX-150? I am a general shortwave listener. Appreciate any information anyone can provide. Thanks in advance.

I can only speak from experience...I have had an HA-230 and HA-700. I would not spend more that $50 for either (collector quality)...that would be a stretch. Unless there is some emotional attachment (perhaps your first receiver as a kid) you can do much better for $150. These were the first of the Japanese imports...low-end components.. they drifted badly, had microphonics and poor audio. Yech...

>Excellent quality.
>

McMaster Carr is like that. I've been ordering stuff from them for many
years, everything
from microminiature stainless steel hardware to heavy industrial tools to
hydraulic
components to motors to nickel mesh to ...

No bullshit. You call, they tell you what they have (almost everything in
the catalog, it's
amazing) and you get it the next day. They told me once that they have a
special
arrangement with UPS to pick up quite late in the day and they have multiple
warehouses
strategically placed to allow for uniform fast delivery.

It is hard to get a catalog from them. The catalogs are extremely expensive
to produce
(over $70 I was told) and they only make so many of them every year. Most
companies
keep the old ones around. Get a friend at a large company to get on the
list for a new
copy next time printed and then to give you the old copy. There isn't all
that much change
from year to year.

They do not have an 800 number, their number is 908-329-3200.

They get my top recommendation.

3602. Bristol Spline Wrenches-an FYI

Hi, All!
First off...this is not a spam. I am adding information about a
response to an inquiry the other day about Spline wrenches aka
Bristol wrenches. So, please don't start e-mailing me about spamming
the NG's! :)
I e-mailed Allen Bond at Max-Gain Systems about the sizes of the
wrenches in their "9-piece set" and this was his response:

Dewayne,
No problem.

Dia. # flutes
.033 4
.048 4
.048 6
.060 6
.069 4
.076 4
.072 6
.096 6
.111 6

Feel free to post this info on usenet, too, if you desire. I have been
disassembling surplus for many years, and have never run accross a
Bristol nut which one of this set would not fit.
73,
Allen Bond
Max-Gain Systems, Inc.
http://www.aaow.com/mgs

Information about this Bristol set is available at the above WWW site.

I also understand that Surplus Sales of Nebraska has a 9-piece set
available. Go to http://www.surplussales.com/CollMiscmain.html
then page 4. They sell for $26 a set plus shipping.

OK, so now everyone should now know everything about where to get a
set!

>
I just built a left over kit one this past winter.
It is not as bad as people say.
I suspect many were built by novices or new general class, and
not built very well.
It drifts about as much as many old slide rule dial type rigs. After
warm up, it is drift-free.
Good amount of output, heavy steel chassis, and reliable.
True, it was a step below even an HW100, but it was a
low cost entry rig.
One thing I don't like is the meter lamp inside the meter case. Has to
be taken apart to change the bulb. What a pain!

Hello OM,

I was wondering, I have a FT-243 that I took apart, it was 4397.3 so I never seen a need for it. My plan is to get a new small crystal and put it inside melt a little solder to attach it. Should this work with any old rig?

Also the old B&W Inductors Air Wound Coil types. Anyone still making coils like these for BA projects?

73,

Jim -- KU4QW

Jim,

You might have a problem with the receiver since it is a superegenerative
circuit. Turning the transmitter into a simple crystal controlled CW
transmitter is a possibility though.

My experience with Fair Radio has been positive also. I've dealt with them several times, the first was somewhere around 1982. Yes, sometimes it takes them a little while to get the stuff shipped, but I've never personally been in need of something so badly that I couldn't wait a week or two. I've also visited their store a couple of times, it's really a cool place to see and worth the 2 1/2 hour drive from Detroit.

I just did a quick YAHOO search: +"TV-7" +"tube test" and up
popped:

http://www2.gdi.net/~padgett/hickcal.htm
No charts that I notice at first glance but calibration and servicing
information.

http://www.vacuumtubes.com/manuals.html
and
http://www.agtannenbaum.com/m_cat.html
are apparently commercial enterprises which lists books and manuals for
the TV-7/U all versions.

...and so forth. But you can do the same as I did and bring up the
information for yourself and explore some of the other 19 that popped
right up.

Good luck!

From: reking1@ix.netcom.com
Message-ID: <357dd168.29621963@nntp.ix.netcom.com>
Source record: 103930

I am looking for a source for the knurled rings used to mount switches, controls, etc. to panels. I recently had to remove the panel from my Hallicrafters S-40 and damaged several of these rings in the process. The rings in question have a 15/32 in. internal thread to fit standard bat-handle toggle switches. I am located in the So. CA area.

TIA

Bob King

3624. Re: Help with Lafayette HA-230

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-10 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <1998061000501600.UAA13565@ladder01.news.aol.com>
Source record: 103931

The Lafayette 230 was factory assembled. The same rig, in kit form, carried model number KT-340. The equipment dates from 1965 or 1966.

It was an inexpensive receiver in its day, selling for $89.50 in the catalog. The radio was an import, covers 550kHz-30mHz, employes 8 tubes, and includes a Q-multiplier rather than any crystal filters. I recall it being a straight Superhet.

If the example is in fine shape, or if you really like the look of it, it might be worth the $150 being asked. I think you can do better with those dollars on a different rx. But remember, pawn brokers lend pennies to the dollar in value, so you can probably deal this down to 80-100 bucks!

Best wishes,
K&#65533;MB

3626. LOCTAL SOCKET NEEDED FOR PRECISION 612

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-10 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <1998061000524800.UAA13899@ladder01.news.aol.com>
Source record: 103933

Hello all, I have a nice Precision 612 that I'm cleaning up. The black plastic loctal socket is pretty chipped, so if you have something lying around the shack that will replace it, let me know. Just as long as I don't have to modify the case to make it fit. I also have a handwritten "owners bible" for the 612. The guy who used to
own it added tube data, a hand drawn schematic, (I have the real too) and alot of other helpful notes, like a home made adaptor to test WD-11 type small pattern 4-pins. I don't have a copy machine, but I can go to one,
there's also the supplimental tube data book for it. I'd only charge you 8 dollars to copy both and mail them to you.
Thank you,
Joe Pratt, Tubecntral@aol.com

Hello OM,

I have a WRL Globe Chife Deluxe! I want to work mostly 40 Meter, maybe some 15/20 meter.
I need a few crystals, I have two FT-243 one is 3735 KC and the other is 3655.0 KC. I would like very much to exchange these for FT-243's for 40 Meter, My first choice would be 7040 KC, but anywhere from 7030 to 7045 (I have a 7050 already)

If interested in these fine 80 Meter crystals let me know what you got, or if you have 40 Meter crystals for sale, I could do that.

From: wizard@connectnet.com
Message-ID: <897463082mnewswizard@connectnet.com>
Source record: 103946

I'm 58 years old and ordered my first "goodie" from Fair Radio when I was still a teen ager. I think it was their first year in business. Every year I looked forward to drooling over those catalogs, being a homebrew ham all the way. Over the years, 10 years all over the world in the Marine Corps, 10 more years all over the rest of the world inn some of the Gov't "alphabet soup" agencies I got my catalogs and I ordered parts and I got my stuff. Sometimes faster, sometimes slower. Whenever I had a problem a letter or a phone call always brought satis-faction. They play no favorites, just everybody the same. That is the only way to be both fair and equit-able to all. As for pricing, you figure in todays market what it would cost you to sort thru the Govt's cryptic at best surplus sales system, tie up borrowed (intrest costing) money to place a sealed bid, wait for the results, go and pick it up or have it shiped with more borrowed money, load and unload, catalog, warehouse, sort, test, wait (while paying intrest), and advertise, pack, ship, and wait for payment, deposit payment, wait for the bank to hold the dep-osit for up to 2 weeks (while they earn extra money and charge you extra interest) and then start the process over. Then put up with anxious buyers who have just found the prize jewel which they just can't live without another day and can't stand to wait for anothed delivery. I'm glad I'm a CUSTOMER, you couldn't give me that business for all the Jennings Vacuum Variable Capacitors in the world. Over the last several years I've seen that Fair must take orders during the week and ship the next week. When this first "flame" hit the net I had just ordered a TV7-DU and some other trivia, that day. I received it, Packed gorgeously and just what I wanted TEN DAYS LATER, including the 5 days for UPS ground to make it across the country. I hope to hell that when I become a silent key my sons and daughters will still be able to order those tan-talizing goodies and get the same wonderful pleas-ures which I have from Fair and I hope that I've been able to teach them to savor the anticipation while the pony express slowly brings the treasures that make life so enjoyable. May Fair Radio live long and prosper!!!!

Bob, most toggle switches (at least) come with the "trim" nut as well as the hex types. I would suppose that even Radio Shack sw's have them. Virtually all the sw's I have in my bench stock stock here have them. If all else fails you, send me an SASE (if its worth it to you) and I'll send you a couple. de K3HVG

Like a lot of us, I ordered my first surplus from Fair in... about 1960?? An ARB receiver. I've been doing business off and on since then. I glad they're there and, again like most of us, really look forward to the catalogs. (Wish I'd bought a '368 when they had 'em!!!)

An acquaintance with only limited Internet access asked me to post this request for him. He is blind and can only get his text to speech hardware to do so much. Newsgroup reading is a problem for his hardware so please respond only via e-mail to: Duane Fischer <dfischer@tir.com>

He would like to purchase a Minerva Tropic Master. This ia a troop entertainment receiver from about WWII. Came in a metal case and has both BCB and shortwave bands.

He is looking for one in very good, or restored condition.
If you have a nice one sitting on a shelf someplace now is your chance to both find it a new home and pick up some cash for whatever it is that you would like instead.

Thanks for reading, and thanks in advance if you can point him to one that is available.
-Larry Ware

Source record: 103962

henry 2k-4 amp in good condition, full out-put. with 100 watts drive on 80 mtrs it makes over 1400 watts. i would rate it at about a 8.5 to 9 out of 10, there are some small scratches and a small chip or two, not bad at all. the guy i got the amp from about 3 years ago had installed a slave relay so you can run your solid state rig with it and it works just fine with my ic-735, no relay problems! i just dont have the room anymore and would like to sell or trade for a table top amp of around the 1kw range. i would sell out-rite for $700.00 and i would drive up to 200 miles and deliver it at that price, or you can pick it up and save $25.00 i will not ship as it is too big and heavy! if interested e-mail me at....Ax9909@AOL.COM

THANKS & 73.....GEORGE [n9ird]

Hello Jared -- if your into Hallicrafters collecting -- the book to have
is "Radios By Hallicrafters" By Chuck Dachis - ISBN 0-88740-929-6

From his book -- the S38A was made in 1946 to 1947. $49.50 -- 5 tubes. 4
bands, .54 to 31 MHz. The S38B and C were almost identical. There was
an S-38 (no Letter) in two versions. S-38's went up to S38E, EM, EB and
some MARK Series.

Several Hallicrafters Web Pages including Chuck's book at URL:
http://www.ac6v.com/pagex.html#HR

Manuals for these are available from several vendors -- see URL:
http://www.ac6v.com/pageaae.html

Although, I have not verified this personally. I was told by several old timers that antique auto restoration supply sources carry cloth covered wire. Of course AES has it as well.

3663. Re: Diversity receiving, one or two receivers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-11 00:00:00 UTC
From: Will White <LUNCHMEATwcw@asu.uswest.net>
Message-ID: <3580B963.3D43AEAA@asu.uswest.net>
Source record: 103820

In a very old ARRL handbook, I read an article about diversity reception that stated that one can use this mode of receiving either by using two antennas spaced 1/2 wavellength apart, or two receivers, and further that the dual antenna approach is the better of the two. Obviously, this has never been popular because of the space that is required.

>
>Robert Fowle, the Hammarlund Collector has a great web site.
>

Does anybody have a current URL for his site? The old link listed on
my site's page of radio links is no longer valid. Meanwhile, I did a
a quick Altavista search and found this other page with several
Hammarlund pictures:

http://home.aol.com/SP600

My site isn't specifically about boatanchors, but it does have pics
and some info about my Hammarlund HQ-160, HQ-170C, and HQ-180AC.
A couple of Hallicrafters are shown, too. From the front page, go to the
gallery, then choose the Miscellaneous category.

Cheers.

Looking for a receiver that I had as a youngster. The Lafayette Explore-Air was the first kit that I ever built. Any help locating one is appreciated. 73 Glenn

3668. WTT: TS-820S for TS-520S

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-11 00:00:00 UTC
From: KB4AEP <crslex@iglou.com>
Message-ID: <357F352F.4C54@iglou.com>
Source record: 103879

I am thinking of trading my Kenwood TS-820S for a TS-520S and am posting to see if anyone would be interested.

I have the Kenwood TS-820S in really good condition. It receives perfectly and puts out 100+ watts on CW but only about 50 watts SSB. I bought new final and driver tubes at Dayton Hamvention and installed them. It may just need alignment or neutralizing but I haven't the time to work on it. It has the blue digital readout and it is very accurate. I also have the owners manual. I am keeping my mic though.

I would would like to trade even for a Kenwood TS-520S in excellent condition that puts out 100 watts on CW and SSB on all bands. Must have manual and schematic. I need a 520S thats working perfectly on receive and transmit for Field Day use.

E-mail me (Mark KB4AEP) crslex@iglou.com Thanks.

You don't need two receivers. There is an approach that switches between two antennas based on the AGC voltage of the receiver. I have an article from a 1930's Radio News magazine with details. I also have some ideas on mdernizing the circuit.

Hello,

I've done business with Fair radio on many occasions over the past 10 or 15 years and found their customer service to be, well, there isn't any. Their business mechanism seems to be straight out of the stone ages. I have asked them very simple questions regarding their stock and have been TOLD to, "write us a letter with your requested information and we'll write you back". I don't think so!!! Many of the guys there act as though they are doing you a favor by answering questions about the equipment you're interested in buying. It's obvious, they just don't care. Consequently, I've been doing business with other sources and have been well satisfied.

Hell, even if they're not particularly interested in doing business, they should at least act like it once in a while. Who knows, they might even obtain a sale through basic customer service. Pfffffffttt.

Good luck,

Peter

You don't suppose that the fact that this scheme has not resurfaced since 1930 means that it didn't work very well?

Crystal theory/mechanics are a little involved to go into here, but resonant freq is a factor of more than size of the crystal. The old Ameco study guides had a good discussion on cuts and etc. Ususally a crystal can be moved some by the home mechanic; youy grind thinner to raise freq, and rub pencil lead to lower.

I recently aquired one of these in poor condition, and got it working fine, but I'm just curious about the history of this radio.....when it was introduced, and what quality of a radio was it cosidered for it's time.....I can find plenty of info on the S38 model, which has a few more knobs on it (the cw pitch control and the noise limiter) but nothing on the "a" model.....any info would be appreciated....

Thanks, Jared----KG9LU

A quick search with YAHOO searching on: +"JAN" +crystal +radio
produced a reference to:

http://www.ee.washington.edu/eeca/text/suppliers.html#specialty

which contained this information:

JAN Crystals

2341 Crystal Drive
P.O. Box 06017
Fort Myers FL 33906-6017
+1-800-JAN-XTAL (Monday through Thursday)
+1-813-936-3750 (FAX)
+1-813-936-2397 (plant)

They make crystals. Minimum order is $10, which might be one crystal, or
might be two.

Also a reference for Crystek Corporation same city and International
Crystal all of which make crystals.

Isn't the Internet wonderful????

Source record: 103764

I have a Globe Scout (Model 680-A) that I purchased for 10 bucks (BIG GRIN). It has a few problems that I am in the process of fixing, and I need some advice.

First, the switch in the back marked "load" was arcing very badly. Investigation revealed that the switch was matted with debris and ruined. What kind of switch is acceptable for a replacement? Pole/throw?

Second, on the variable cap directly next to the meter (it is unmarked) there is a connection missing. on the lead closest to the meter, there is a gob of solder, but no connection. Any ideas as to where this goes? Um... what does this cap control?

Anyone have a manual that they would like to copy for me? If so, let me know the cost and postage.

P. Troiani, N3PEE

I have the pleasure of owning a Westrex 9B2 transceiver. I have collected many parts that were missing, but am still short two.

These parts are marked :

250 KC
1150 KC
1650 KC

These are the low and medium frequency oscillator units. I have been unsuccessful in obtaining these units, but was wondering if I could use a crystal oven with the appropriate crystal installed. The ovens do fit in the slots. The manual makes no mention of replacements.

Thanks,

P. Troiani III N3PEE

My 1962 Harrison 37th ed catalog says this about the Globe Scout
Deluxe transmitter SD-75a: "Now with relay controlled circuitry",
Compact, self-contained transmitter has bandswitching over 6 through
80 meter range; provides input of 90 watts CW, 75 watts phone plate
modulated. Built-in power supply. High level plate modulation is
maintained. Features pi-network output on 10 through 80 meters;
link-coupled on 6 meters matching into low pmpedance beams. New type
shielded meter. Straight-through operation of final on all bands.
Size: 15 1/4" x 6 1/4" x 11 1/4" Shipping weight 35 lbs. Net each
$159.95.

I have a working Globe 6-2 VFO with docs for sale, so I wondered
if would work on yours. The catalog mentions the Globe high-bander and
similar, but not yours specifically. It's docs say it just plugs into
the crystal socket. The picture of your unit looks like it's got a
frequency dial, is that correct? Might be a meter.

> Sorry to hear the W6-landers are all dropping out!

It's been a while, but I'm still trying to get back up on 6meter SSB/AM.
I have an old Siltronix 10/11D "CBer's Delight" that I wanted to convert
the 11 meter section over to six, but time is so valuable that as much
as I hate to admit it, I'd sooner just buy a six meter rig.

There was a guy one here who asked me to make an offer for his Swan 250,
but I have absolutely no idea of what they're worth nowadays.

Any suggestions... or six meter SSB/AM rigs for sale or trade?

> Four 6267 EF86 AMPEREX BUGLE BOY Holland, new, orig. boxes..25.00 ea.
> One 5AR4 GZ 34, AMPEREX Holland, new orig. box...49.00

What, is Amperex a pseudonym for 24 karat gold? I hate to tell you,
but Amperex tubes are not that popular in my neck of the woods, and
certainly not at these prices..

> 7027 A G.E. USA, new in orig. boxes,... 35.00 ea

I'd rather convert over to EL34 or 6550 than pay $35 each..

> One 6L6 GC short bulb, blackplate, new orig. box... 44.00
> Five 6L6 GC RCA grey plates, tall bulb, new orig. boxes..24.00 ea.
> One 6550 G.E. USA, new orig. box... 40.00

Not bad for the short 6L6's and the 6550's, but the tall ones are near
top dollar at $44..

> Five 6V6 GT, G.E. usa, new orig. boxes, 10.00 ea

Now, this ain't bad..

> Two 6SN7 GTB RCA USA, new, orig. boxes, 9.00 ea.

6SN7's are literally in gross overabundance..

> Five 5U4 GB, G.E. USA, new orig boxes, 11.00 ea.

5U4's are also plentiful..

> Four 12AX7 WA Sylvania military spec. new orig boxes, 12.00 ea.

Not bad..

> Twenty WESTERN ELECTRIC 417 A, new, orig. boxes, 19.00 ea.

The most common WE tube available..

> One KT 88 GENELEX GOLD LION GT. Britain, new in orig, but worn box,
> 175.00

Are you sure it's not GENELEX "GOLD PLATED" LION?

These may sell to individual musicians at the prices listed, but I don't think that anyone from the ham radio or HiFi/music tech community is gonna pay top dollar when they are available from other sources at more reasonable wholesale prices..

Just my opinion, of course..

3722. WESTERN ELECTRIC TUBE SALE UPDATE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-12 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <1998061200444600.UAA21676@ladder03.news.aol.com>
Source record: 103828

Hello,I have the following new or very good used Western Electric tubes. All new are in original boxes, and quantities vary. I just got more of these numbers in, so unless noted I have more than enough to go around. Shipping only 3.00 Anytown, continental USA. Insurance optional. Prices on this list good awhile quantities last. International accounts welcome.
If you don't see what you are looking for, or you have requests for any of my other vast stock of ALL TYPES of tubes, please email. Thanks, Joe Pratt, Tubecntral@aol.com

WESTERN ELECTRIC NEW MINI's: Have used also, at 50 % of new, inquire
396 A / 2C51... 7.50
401 A / B..... 6.00
403 A..... 7.50
403 B..... 9.00
404 A..... 13.50
407 A..... 7.50
415 A..... 11.00
427 A..... 6.00

Various other WESTERN ELECTRIC : One each unless noted:
310 A Early engraved base, used v. good, 30.00
310 A later version, small eyelet, used, also V. good..30.00
352 B, used but excellent ...50.00
397 A, used klystron.....25.00
418 A, One New, 32.00, one used, 15.00
422 A, one used, v. good...30.00
717 A , new, 8.00, used 5.00
723 A/B, New klystron, 50.00, used,25.00
And last but not least...
One Western Electric 102 - F "Tennis ball" triode, originally owned by Quinn Brown, a retired W.E Engineer who had this on his shelf for Forty years before I got it ! It is in excellent physical condition and tests as new, no box..165.00 firm
Thanks for reading, more coming soon. Joe
Thank you,
Joe Pratt, Tubecntral@aol.com

Found a guy at a WW2 re-enactment flea market who was trying to sell his carton of new 1625 tubes. He wasn't sure what radios used them but they go in the ARC Command Series of transmitters in pairs. P-51's and B-17's use them. Well anyway, he wants to unload them and he was asking $2 each there but may be more with shipping. Please write (sorry, no e-mail) to Tom Brennan, 308 Twining Rd, Oreland, PA 19075. That's near Philadelphia.He has about 35 left in original boxes, JAN 1625 power output tubes.

Tnx, Dave KC3QS

So, YOU'RE the one who blew the line input chokes on my URM-25D! If someone has a junker, please send me the filter assy? Suggest try to find rev D or higher - you'll be happier. Be patient - they're everywhere. Most good gear is not on the 'net.

Would appreciate a line on some of the other places you have found that
have a large inventory of electronic surplus, similar to Fair. The ones
I know of are IG Ford in Canada and Nebraska Surplus Sales. Know any
other good ones?

Hi Guys;
I have this Gonset Mobile receiver but am not sure if its a Super-Six or not.
Its in very nice condx as you will see from the picture.
I know it needs to be hooked up to a radio and suppy(?) to work, so it is
untested.
Its very clean, no extra holes visable and I dont have any paper work.
Interested parties will know wat is is. Price is $30 shipped Conus.

Source record: 103837

Hi Guys;
I have for SALE:
Johnson 275 watt tuner w/meter! I do not have the remote coupler unfortunately it was lost !
Its in extremely nice condx, all the decal in back is intact and the screws appear to never have been turned as to get inside. The tuner is untested and I can probably find a copy of the manual. The Price is $90 plus help with the shipping cost.
Here is a Jpg Picture of the front and back of the tuner. The unit is much better that the picture, when i stitched them together, it lost it's clarity. If any one has a doubt, i can retake the pictures and send them later to the parties!

Hi &#65533;

I am looking for a power regulator chip "MC1469". It was used as a control circuit in a 400W power supply (1984) and don't want to replace
the whole unit.

I will really appreciate it if you could tell me whare to find two (one
as a future spare) of these regulators.

Please e-mail me for I don't always read news-groups.

Regards &#65533; Kobus

>73s Don Davis DXGUY@earthlink.net

Actually neutralizing is done to prevent an amplifier (1 tube or 10 tubes) from becoming unstable at its FUNDAMENTAL frequency and becoming an oscillator, e.g. a frequency doubler or tripler never needs neutralization. However, a doubler or tripler stage can have parasitics just like a straight through amplifier. If feedback is too high with any amplifier without neutralization, it will become an oscillator. Parasitics are NOT cured by neutralization. These high frequency oscillations are caused by other resonant paths, e.g. inductance of leads to the tube socket and plate lead resonating with stray capacitance and other inductance paths. Parasitics can be LF or VHF but are usually totally unrelated to the HF amplifier operating carrier frequency. One technique to cure parasitics is to place a low Q inductor in the plate lead. This is done to "kill" the Q and the oscillation at some VHF frequency well above the am[plifier's HF operation.

3739. WANTED: Crystals for Tempo and Drake

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-12 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6lr9sv$sio@sf18.dseg.ti.com>
Source record: 103845
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I'm looking for some crystals:

For Tempo One:
- Need crystals for the 28.0, 29.0, 29.5 band segments.

For Drake R-4C:
- Interested in any accessory crystals for SW bands, WARC, etc.

Thanks and 73,

Dean - K5DH

3740. WTB FT-101 Tubes

3741. CW / Telegraph collectable

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-12 00:00:00 UTC
From: PA3ESA <Nico.vanDongen@digital.com>
Message-ID: <01bd95df$ff04eb40$3070c610@utovandongen2.uto.dec.com>
Source record: 103847

CW / Telegraph collectable

I have, what I think might be of interest to Telegraph and/or CW-key collectors. Recently I found a pair of Fullerphone's. They are a Portuguese version made somewhere in, I guess the 1930's in Lisbon. This type also has build-in telephone functionality.
Captain (Later Major General) A. C. Fuller invented the Fullerphone in1915. It is a DC telegraph. The Morse signals are made audible at the receiving side by an interrupter or buzzer chopper and headphones. This design made it possible to transmit over a very long, poor quality single line where the earth acted as return path. An additional advantage was that the line could not be eavesdropped by third party's

It is housed in a small box 4 by 8 inch and 3 inch high. The top is made of a black isolating material, the case is made of green painted aluminum with two detachable side panels.
On the top are four wire-posts, a system switch and a small CW-key. Fixed to the set is a headset and on the side of the box a plug for the handset. Both units are in good condition and more or less working. They're only lacking maintenance for the last forty years.

I collect British military HF radio equipment of all times. I prefer to trade, if I can't find anything to trade I'm willing to sell as well.

First, and apology to Steve. My post concerning his suggestion was just a
little snippy. No flame intended.

I've worked with diversity systems both professionally and hobbywise. All the ones I've seen select the "best" signal from multiple receivers. For AM this is pretty simple to accomplish.

The following scheme is used with R-390's and is easily adaptable to other receivers: The audio out of the two receivers is combined. (In the 390's this just means tying the two "diode load" rear-panel connections together.) The AGC bus on both receivers is opened. The two AGC signals are combined by a simple 2-diode gate and applied to both receivers. (again the 390's have built in diodes and rear panel jumpers to accomplish this.) The receiver with the stronger signal quiets the other. The action is differential, and when the two sigs are equal, both feed the output; so there is very little discontiuity.

I suppose you could build a circuit that would watch the AGC voltage in a single receiver and try another antenna when the signal fell below a specific level. Sounds easy in principle, but I suspect there would be some pretty serious technical challenges. How do you determine the switching threshold? You'd probably want to do this automatically so you didn't have to knob twiddle to compensate for long term signal variations. You'll need an electronic antenna switch, as I'm pretty sure you'd hear a mechanically one. Also, how would you avoid thrashing when the signals were equal? Could your circuit remember which signal was on the rise?

I guess such a scheme is not impossible, but I'd stick with the time proven one's.

Diversity is a worthwile technique for the SWL, especially if you want to LISTEN to music in the face of selective fading. My R-390/R-390A setup beats the sync detector in my Sony 2010 buy a considerable margine. (I won't go into the 10 other ways a professional receiver is better than even a good portable.)

> Obviously, this
has never been popular because of the space that is required.,

This doesn't make much sense - the military installations with 2 SP600's also used 2 antennas - there was no saving of space - let's have more discussion/illumination. It would seem the opposite (?) - that the military would've utilized this easier method themselves in the field.

I think many of us would also like to learn more about space diversity setups in general, as to how we might wire them up with two rcvrs not specifically designed for this use - as many of us would like more solid SW reception. Besides, it would be fun to frig with...

>Do I need two receivers for utilizing diversity reception, or will one
>do, e.g. SP600 JX17?

As far as receiving conventional AM sigs goes, has anyone tried
using a single antenna with a single receiver setup for ISB and then
feeding each sideband to a separate speaker?

The ISB setup takes care of much of the selective fading problem -
in fact the carrier can fade away entirely and you won't even notice.

Works reasonably well, as long as your RX is exactly on freq with
the station - if your tuning is a few CPS off, sounds like the signal
source is rotating, as USB audio beats against LSB audio...

A Heath SB-102 question here:

Can anyone tell me where the heck the microphone audio, from the mic connector, is supposed to be wired? I recently acquired this thing, and it came with an aftermarket speech compressor that I removed. The trouble is, I don't have the schematic yet, and I want to re-connect the mic plug to where it went BEFORE the compressor was installed. The PTT pin is connected, I just need to know where the audio pin goes. I think it might have gone to one side of a 22K resistor on the nearest PC board, but I'm not positive. If anyone could look in the schematic and tell me where it goes, I'd be grateful :-)

Hi Steve, I recommend the Globe Electronics V-10 VFO for the Globe Scout Deluxe. On the crystals, try Petersen Crystals...you'll find their phone number and address in the QST advertisments. 73, John

3776. Re: Need help w/Heath SB-102 mic wiring

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-13 00:00:00 UTC
From: Bob Bethman <rbethman@erols.com>
Message-ID: <358284FD.EBD74F2A@erols.com>
Source record: 103790
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Steve,

The audio side of the mic indeed goes to one end of a 22K resistor. It is R931 on the schematic. The other end of this resistor is tied to pin 2 of V1, a 6EA8, and R20 - another 22K resistor whose other end goes to the Phone Patch jack on the rear apron of the rig.

I hope that helps and solves your problem.

If you have other questions feel free to E-mail me. I have the SB-102 manual, an SB-102, and a PS-23 power supply. My first rig was an SB-102. I plan on restoring this one to original specs.

3782. Re: Diversity receiving, one or two receivers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-13 00:00:00 UTC
From: Bill Smith <billsmith@jps.net>
Message-ID: <3582bec1.0@blushng.jps.net>
Source record: 103796

Basic space diversity setups are very simple... connect each of two antennas to each of two receivers and mix the receiver audio together (or use two separate speakers). The key is to connect the avc circuits of both receivers together. The idea is that the strongest signal will boost AVC voltage in both receivers. The receiver with the lower signal will be desensitized.

I have been amazed at listening to a single station with two receivers. It doesn't seem necessary to locate the antennas a quarter wavelength apart, even two sets, one with just a telescoping antenna (a portable set) and another connected to an amateur antenna (just above, on the roof) exhibited vastly different fading characteristics. Based on this simple test, It would seem that diversity reception would work in a variety of installations.

A device was mentioned that allowed diversity reception using just one receiver. Does this device literally switch between two antennas? I would like to know more detail regarding this approach.

3784. looking for 3TF7's ?? see this!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-13 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <3582B54A.4AC4@ix.netcom.com>
Source record: 103798

-----BEGIN PGP SIGNED MESSAGE-----

I have had a number of the "390" series receivers
at one time or another and the 3TF7 ballast tube
has always been an item that fails.

After an analysis of what this ballast tube does,
I concluded that any vacuum tube that has a filament
voltage/current relationship that matches
the original ballast tube would serve the same
purpose.

I found two vacuum tubes that meet this criteria
and would be easier and less expensive to find:

STEP 1: move the wire on pin #2 of the 3TF7 socket to pin #4.
2: move the wire on pin #7 of the 3TF7 socket to pin #5
3: find either a 12BY7A OR a 12BH7 tube and
4: plug it in the socket.

you are only using the filament of the tube and it works the
same as the original 3TF7 ballast tube !! Works great/lasts
a long time!! :-)

You will note in the schematic diagram of the 390 manuals,
that the filaments of the vacuum tubes are in series/parallel
strings so that they can all be powered from a 25 Volt
filament
supply source. True, the 3TF7 is to provide some "inertia" to
the operation of the filament currents of the PTO and BFO
oscillator tube filaments in order to provide some added
frequency stability during dips or "glitches" in AC line
voltage, but the MAIN purpose is to
allow the odd number of tubes to end up being powered from
the 25 Volt supply, so the extra 3TF7 ballast tube in
series with the two #5749 tubes allowed these two
6 volt tubes to be operated off of the 25 Volt filament
supply.

> discontiuity.

This isn't really selecting, is it? Both receivers contribute some audio
to the total output, albeit generally, one should contribute much more. I
think this system was used most widely because, as I understand it, the
biggest use for diversity reception (at least commercially and in the
miltiary) was for RTTY. In this case, a switched arrangement (by
definition, some discontinuity in the detected output) was unacceptable.
For AM/SWL reception, this shoudn't matter, as long as you don't get a
loud click each time the antenna switches.

>

> circuit remember which signal was on the rise?

Here's what I've been thinking (I haven't tried any of this yet). A comparator is used to compare the AGC voltage to a reference voltage. The reference voltage should be variable to set the switching threshold. The output of the comparator drives a flip-flop (the type that changes states with an input, and doesn't change until it receives another input. I have this written down somewhere, and if my memory serves, it's a one-shot). The Q and not-Q outputs of the flip-flop are connected to PIN diodes (although PINs may not be required), configured as a switch (there's a circuit for this in most recent ARRL Handbooks). That's it. Some arrangement for making the switching circuit remain with the selected antenna for a minimum amount of time may be needed to preclude the "thrashing" you spoke about. Comparators have hysterisis which may solve this, although I'm guessing you'd want something with a longer time constant. Also, some voltage level shifting may be required to interface the AGC to the comparator. You'd probably want a buffer circuit of some sorts to ensure the switching circuit does not load the AGC bus.

Of course, using these modern components doesn't quite fit with boatanchors. The 30's circuit I mentioned would. It used a mechanical stepped switched and an ignitron!

>
> I guess such a scheme is not impossible, but I'd stick with the time proven
> one's.

I'll agree, you can't go wrong here. Personally, there is some attraction for obtaining diversity reception with only one receiver. I guess you'd have to
determine if the "complexity" of the switching circuit is less hassle than two receivers (which provide easy back panel access to and reconnection of the AGC and detected outputs, like the R-390 - or even more hassle of modifying two receivers that don't have this functionality), the gate circuit you described, and an audio combiner circuit. Without any experimentation, we'll never know how complex the switching circuit needs to be. What I described above isn't very complex, but it may not work very well either. ;-)

> into the 10 other ways a professional receiver is better than even a good
> portable.)

Not surprising, considering the sync detector in the 2010 was so-so when it came out around 5-10 years ago. And, it's pretty hard to beat always having a "good" signal (provided by diversity reception) with a detector

that tries to ﷺmake up for﷽ parts of the signal that have faded. There﷽s no doubt diversity is the way to go.

You'll get essentially the same thing with a good synchronous detector,
and less tuning criticality.

3795. FS: NOS Rectiofier Tubes - CORRECTION

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-13 00:00:00 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <3583001C.2934@hamradio.org>
Source record: 103809
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is a correction to my earlier post - the 4B32s were incorrectly
called 4D32s.....damned bifocals!

I have the following NOS tubes for sale:

1 - 872A Mercury vapor rectifier - $20.00
2 - 4B32 Xenon filled rectifier - $25.00 ea

The 4B32s are the 872A equivalent in a gas-filled rectifier like the
3B28 and 866A are related - fast warmup time.

These are in JAN boxes and have never been used. Add shipping charges
from 44134.

From: Tim Cook <timcook@erinet.com>
Message-ID: <6lv6ir$fua@eri.erinet.com>
Source record: 103810

Hi.
I picked up a real nice working NC-183D today and wonder if anyone has a copy of the manual for it. I think the AVC tube may be weak, as the RF gain must be reduced on real strong signals to reduce distortion even with the AVC on. The audio is terriffic on this radio. It only happens on local AM BCB stations and a couple of the stronger international BCB stations. Otherwise the radio works perfect. Any idea as to the worth of the radio? It is real clean, just a couple of scratches on one side near the back. The front is super clean.
thanks for any insight and please email direct if you have any information

GE OM,
I just picked up a HT-40 6-80 Transmitter (Am/cw) and the sx-140 Receiver 6-80. I was wondering if anyone could tell me a bit about these. Like what year are they from, just general stuff like that. They both seem to work fine, I couldn't figure out the output of the HT-40 but it seem to have 40 watts cw output maybe?

Any help, hints or tips on my new boats would be looked on with thanks.

3817. BC-696 or BC-459 wanted in trade.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-14 00:00:00 UTC
From: Radio Randy <rjones@plix.com>
Message-ID: <3583899C.350C@plix.com>
Source record: 103733

Hi All,
I have a BC-457A (4.0 to 5.3 Mc) transmitter I would like to trade for either a BC-696 or BC-459. The 457 is made by Western Electric and is complete except for the cover over the 1625s. Your radio needs to be complete, also, as I intend to get it on the air as described in the 1964 Radio Amateur's Handbook.
I would like to make a "straight across" trade and will pay my portion of the shipping costs (from Washington State). I'm hoping to find someone restoring their B-17G and needing the 4 to 5.3 frequency range. If you can help, please drop me a line.
73, Radio Randy

I am looking for a Collins 516F-2 power supply to salvage for parts. It can be with or without cabinet - just not in ashes from a bad flame-out!

I am not looking for a working 516F-2 - just a good parts source. If anybody has one (or more) in their junk box and would like to part with it, please Email me with condition (if known) and price wanted.

Thanks,

Al - K8EUR

3826. Use of BC-939-B Antenna Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-14 00:00:00 UTC
From: w5ami@altavista.net
Message-ID: <6m0ruvadu1@nnrp1.dejanews.com>
Source record: 103742

Hello to the group,

I recently acquired a hallicrafters BC-939-B antenna tuning unit made the the BC-610. This tuner is complete, although I'm wondering if anyone has had any experience using one with un-balanced 50 ohm input.

The original 610 had a balanced output at around 120 ohms or so from the link coil. I have since converted mine to a pi-network to use with standard unbalanced 50 ohm stuff. Attempting to use the tuner with this configuration, does not yield good results. I realize the tuner was designed to load up random length wires or mobile whips, but wondering if it can be adapted to load multi-band type antennas using 50 ohm coax.

The configuration of this tuner is rather odd compared with others in that it uses no variation in capacitance but rather inductance only, with the exception of two fixed vacuum caps.

Anyone have any experience with these?

Regards,
Brian / w5ami

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday June 21st 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

3836. Re: Diversity receiving, one or two receivers?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-14 00:00:00 UTC
From: Gray Frierson Haertig <gfh@haertig.com>
Message-ID: <35841AFB.5317@haertig.com>
Source record: 103752

The general rule of thumb for spacial diversity is the antennas should be at least 5 wavelengths apart (broadside to the direction of reception). The fact that you had much improvement with closer spaced antennas points out another interesting aspect of HF diversity reception. That is, alot of the fading we hear on an HF circuit is caused by Farraday rotation, i.e., a change in apparent polarization. This means that a lot of signal improvement can be had by using two antennas with different polarizations connected in a diversity arrangement.

At VHF and UHF frequencies where receiver noise dominates atmospheric noise, spacial diversity will also give you a net 3 db improvement in S/N. This is because the signal, which is coherent, adds algebraically at the combiner, and the noise, which is non-coherent adds geometrically.

Gray

Hello,
The 4D32 is a RF output tube used in Viking I and Collins 32V series
transmitter.
What you ae selling is the 4B32 rectifier tube.
Good Luck.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes,rec.antiques.radio+phono,rec.audio.marketplace,

Al,

I have one of these testers, assembled. Bought it for $5 in good condition. It's a very basic emission tester, which pretty much tells you if the tube lights up and conducts. I've found that it's very inaccurate, in that some tubes that are brand new, test "bad". I've actually used two of these units with the same tubes, and both read the close to the same. And no, the tube in question was not a dud. I've tested several of the same type, with the same results. Still, it's OK to check out ham gear tubes or old radios, which is why I bought it to begin with, but pretty useless for matching audio tubes.

Hope this helps.

Source record: 103618

Hello,
I read somebody suggested to use 12BY7 or 12BH7 after modifying the pin out of the 3TF7 tube sockets when expensive 3TF7 is not available. I have a better suggestion. There are two 5749s (6BA6) used in the PTO. You just replace it with 12BA6s and short the Pin No. 2 and 7 of the 3TF7 tube sockets.
That is all you need to do. No need to disassemble the IF chassis or solder and desolder.
12BA6 is also much easier and cheaper than 12BY7 or 12BH7 (used in Mcintosh amp).
Good luck to you all.

Source record: 103675

Hi, all!
Yea, you read it right. I have an old Vibroplex Lightning bug that
I don't use any more. It's a good key. Only pad points are: missing
ID plate and has homemade dit weight. Complete with cord and plug.
I am willing to trade straight across for an original J-37 key and
base in good, complete shape (I don't care if it has leg iron or not.
I will accept *only* a J-37 key. And I will not accept junk. :)
You pay postage my way and I will then pay postage your way. If
interested, just e-mail at below address.
Thanks!

Electro Voice 623 Microphone

The microphone head only, no stand. Includes the matching connector. In general it looks reasonably nice until you examine it closely and see that it's pitted or more precisely scratched. It looks like it was stored at some time unprotected with other electronics parts in a drawer or box.

I have no idea if it functions and have nothing to test it on. I acquired it with some other equipment and don't intend to use it.

If you're interested in it, make me a reasonable offer????

Ian, K6SDE

For Sale a URM25-F signal generator covering 60khz
to about 52 mhz. Only problem is one missing knob
on the external input switch. Reat of the generator
is in good condition. Asking $125 and you ship.

Thanx and 73 de Jim
N7CLV

3867. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6m26e4$p7c@news.Hawaii.Edu>
Source record: 103679
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

3869. TF1073 sweep generator info required

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-15 00:00:00 UTC
From: robinson@srsuna.shlrc.mq.edu.au
Message-ID: <6m2h8n$je6$2@sunb.ocs.mq.edu.au>
Source record: 103681

Hi there,

I picked up a sweep generator on the weekend, and need some info on it,
where was it used, or a circuit or a manual.

It covers 10kcs-33mcs in 9 ranges, has 6 valves wired in,
a turret band change, external PSU.
On the front panel it has:
GENERATOR, SWEEP FOR TEST SET CT. 381
SNo. AAL16
6625_99_580_2589
Inside on a plate it has:
MARCONI TF1073A/6MI
No. 52265/03

I have fixed one fault in it, but it still won't give a peep!

Source record: 103683

I have a CCA VGC, winged, KWM-2, S/N in high 11,000's. (Front panel / cabinet appearance is more like CCA Excellent.) Very few, almost-undetectable marks on cabinet and front panel. Chassis is very clean. Crystal codes are mostly 6-62.

The radio was professionally serviced/aligned in May (at cost of $155). Several weak tubes, several caps and other minor parts were replaced, and it was thoroughly aligned and tuned. The radio works perfectly on all bands with
full output. PTO tracks great end-to-end.

Previous owner replaced the original RCA antenna plug with a BNC. That has now been returned to the original ceramic RCA. The rear panel, immediately beside that plug shows some minor scuffing. Wired-in relay has also been changed.

No power supply is included. Best offer over $550 this week. Add $20 for UPS
surface shipping/insurance. Please reply by email.

(Repost. Crossposted to fewer groups, multiple times.)

LAST CALL FOR VOTES (of 2)

Votes must be received by 23:59:59 UTC, 22 Jun 1998.

This vote is being conducted by a neutral third party. Questions
about the straw poll should be directed to the rec.radio.amateur.*
Working Group at <rra-wg@theporch.com>

Votetaker: Jeremy Billones <billones@primenet.com>

STRAW POLL Q & A

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV
process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?
Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which
initiated the last major reorganization in 1993) is the point-of-contact
for questions about this opinion poll. Principal members are Paul
W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg
member, Gary Coffman, KE4ZV, also endorses this opinion poll. this
opinion poll will be conducted by an unbiased third party from the
Usenet Volunteer Votetakers (UVV), Jeremy Billones

(billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborious and time-consuming, and perhaps unnecessary), we will conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV). During the poll, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I disagree with this newsgroup's charter or I believe that this newsgroup's existence should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the preceding 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the

readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If this opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, this opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)
rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are
principally used by readers of rec.radio.amateur.*, and their fates
would substantially be decided by any significant reorganization of the
rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.*
reorganization, rec.radio.cb is not included in this opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups
(except for rec.radio.broadcasting and rec.radio.info, which are
moderated). In addition, the following individuals were consulted prior
to this announcement (note that consultation does not necessarily
imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list
gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization,
former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV
process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group
_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Vote "YES" for all of the existing rec.radio.amateur.* newsgroups.

Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?

Vote "NO" for all (or all but one) of the newsgroups.

Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?

Vote "YES" for any newsgroups that you wish to remain unchanged, and
vote "NO" for any newsgroup you wish to have reconsidered in a future
RFD/CFV.

Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?

Since this opinion poll is for both the existence of given newsgroups
AND their current charters, you should vote "NO" for that newsgroup.
Again, this is a non-binding opinion poll simply to determine if current
newsgroups should be considered for modification or deletion, not a vote
to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by opinion poll. A
future RFD/CFV would have to be initiated to do this. You are, of
course, welcome to express your opinions concerning new newsgroups by
posting them to rec.radio.amateur.misc (*NOT* by E-mail to the
vote-taker).

Q: I have no opinion, what should I do?

You may wish to read the preceding 30 days of public discussion on
rec.radio.amateur.misc about this opinion poll to develop your own
opinions (go to http://www.dejanews.com/ and search for "STRAW POLL").
If, after reading the public discussion, you still remain undecided, you
may abstain from this opinion poll. You may do so informally by not
participating in it at all, or formally by explicitly voting "ABSTAIN"
for all of the newsgroups.

IMPORTANT VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One vote per person, one account
per voter. Votes must be mailed directly from the voter to the votetaker.
Anonymous, forwarded or proxy votes are not valid. Votes mailed by
WWW/HTML/CGI forms are considered to be anonymous votes.

Vote counting is automated. Failure to follow these directions may
mean that your vote does not get counted. If you do not receive an
acknowledgment of your vote within three days contact the votetaker
about the problem. It's your responsibility to make sure your vote
is registered correctly. Duplicate votes are resolved in favor of
the most recent valid vote. Addresses and votes of all voters will
be published in the final voting results post.

HOW TO VOTE:

Extract the ballot from the CFV by deleting everything before and after
the "BEGINNING OF BALLOT" and "END OF BALLOT" lines. Don't worry about
the spacing of the columns or any quote characters (">") that your
reply inserts. Please, DO NOT send the entire CFV back to me!

Fill in the ballot as shown below. Please provide your REAL NAME and
indicate your desired vote in the appropriate locations inside the ballot.

When finished, MAIL the ballot to: < voting@clark.net >
Just "replying" to this message should work, but check the "To:" line.

Examples of how to properly indicate your vote:

```
[ YES ] example.yes.vote
[ NO ] example.no.vote
[ ABSTAIN ] example.abstention
[ CANCEL ] example.cancellation

DO NOT modify, alter or delete any information in this ballot!
If you do, the voting software will probably reject your ballot.

If these instructions are unclear, please consult the Introduction to
Usenet Voting or the Usenet Voting FAQ at http://www.iki.fi/~jpatokal/uvv.

======== BEGINNING OF BALLOT: Delete everything before this line =======

Sams Photofact volume 3 folder 7 covers the Hallicrafters S-38.
You might see if your library has this folder and photocopy it.
I notice in the Sams index that even if you bought it from them,
it would be a photocopy. They want $24.95 per manual or reprint.
Volume 3 was originally published in January 1948.

> Jim -- KU4QW

Jim,
The HT-40 was made between 1961-63 and originally sold for $109.95
factory wired and $89.95 in kit form.The power output is listed as 75
watts on cw and about half that on am. It is crystal controlled with
provision for external vfo.It uses a 6DQ5 in the final.
The SX-140 was made from 1961-64 and sold for $124.95 ($104.95 kit).
I.F. freq. is 1650 khz.It uses an external speaker and the tubes used
are: 6AZ8 R.F. amp & xtal marker, 6U8 osc/mixer, 6Ba6 1st I.F., 6T8A
avc,det.,anl,1st audio, 6AW8A s-meter amp/ audio out and 2 silicon
diodes as rectifiers.
According to my Hallicrafters book they currently sell for about $30-60
each. Hope this helps.
Don,W3HYW

I have a model 3136 Gonset Communicator 111. 6 meters AM. This is the second one I had and probably the nicest I have ever seen. It works and looks excellent. All original knobs and a very very RARE original MIC. Comes with a copy of the manual and includes 3 crystals. 6 Meter AM activity is very active with several AM nets going on.
First $125+shipping gets it. I will trade for a UHF 440-450 mobile tranceiver. Not commercial units. 73 Chris

3894. Unassembled EICO Kit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-15 00:00:00 UTC
From: awaschka@palmnet.net
Message-ID: <35859F5A.733F@palmnet.net>
Source record: 103706
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes,rec.antiques.radio+phono,rec.audio.marketplace,

I recently acquired an unassembled EICO 635 Tube Tester Kit. I pesonally watched the staples pulled and opened the box to inspect its condition. I bought it because I needed a tube tester, but realize there may be a collector out there that would value it more than I and therefore do not want to destroy its value as an unassembled kit before "testing the waters".

I have not inventoried the parts, but they are in their unopened boxes. One of the case latches has a small spot where the chrome has blistered off. Otherwise the case is perfect, as are the front panel and meter. Complete with assembly manual, test data manual, assembly pictorials, and warranty card.

If you would be interested in this tester as a collector, please e-mail with an offer. After a week or so I will decide whether to build and use or sell and will notify all who responded.

Thanks,

Al K5TAN

I have a SX-42 receiver that the "S" METER is not too sensitive
(is there a tube that amplifies the meter)? A strong signal does
an eight. Even the FM "O" does not have too much defection.
The pot on the back will only "O" the meter.

Message-ID: <35883155.1A39@hamradio.org>
Source record: 103565
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Eimac 8168/4CX1000A - "almost new" - I unpacked it, plugged it into my Collins 30S-1 and ran it for a couple of days until I got a 4CX1500B. Maybe 10 hours filament time and less than 1 hour transmitting time.

Full output - new performance guaranteed. It looks so clean that it could be mistaken for brand new - without box.

$200.00 including UPS shipping and insurance to CONUS.

Al - K8EUR
al.dolgosh@hamradio.org

Folks,

does anyone have a spare audio amplifier for the RCA ET-4336 transmitter for sale? This amplifier is a self-contained, 7-valve unit - mains powered, 110V or 220V AC depending on version. Part nos are MI-11220 or MI-11209.

A friend (not on email) is looking for one of these to complete his ET-4336 installation, and will consider shipping it from anywhere (he is located in the UK), provided it is working, complete and unmodified.

Hello Folks;

I recently picked up a Neutec SM-1630U synthesized radio repeater and would like information in programming it. It uses a 2716 EPROM in the synthesizer. The manual refers to a programmer. Has anyone had any experience with programming this radio?

I cannot seem to locate Neutec. Are they still in existence? Were they bought up or have they just "gone away?"

Thanks

For sale:

R-4C sn 22359 - includes 500 Hz filter and 160 meter crystal.
T-4XC sn 22364 - includes 160 meter crystal.
AC-4
MS-4

This was my first C-Line and I have owned it for the last 6 years. Condition is a 9+. Front panels have no scratches. Cabinets have been repainted but look very good. chassis clean, new cabinet screws, feet, blue filters, dial windows, new filter in R-4C, some tubes recent Sylvania's, full RF output, etc. All work done by myself.
The gear has been boxed up for the last 4 years as I have a second one that I use. Too much stuff. I hate to sell but I need some cash for accessories for my Ford 8N tractor. Price is $500 plus shipping (US only). If interested please Email for phone number.

Thanks, Gary W8PU

Hi Everyone,

I am starting a collection of ALL SONY World Band "Shortwave" Radios ever made, old & new.

I have about a dozen so far and I need everyone's help to find these original radios in "mint" condition with original accessories and box for collecting.

My question is: Is there anyone out there started such a thing? (...or maybe I am nuts??!!) Where to start looking for older model SONY Shortwave World Band radios? Is there a Radio LIST of all the SONY "CRF","ICF SW" & "SW" models on the net somewhere?

If you have ANY SONY World Band Radio in mint shape, please email me with your model number and best price for a "CRAZY" collector!! :=)

Thanks in advance and any response will be appreciated!

Hi Gang,

This coming Saturday, June 20th there will be a Swap Meet
for Radio Collectors in Spencer NC at the North Carolina
Transportation Museum " SPENCER SHOPS ".

This is the second annual Swap Meet held here by the
Carolinas Chapter of the Antique Wireless Association.

The Swap Meet starts as soon as the Museum opens at 9am.
It will be in the picnic area under the shelters.

Coffee and donuts will be provided in the morning, and fried chicken
will be available at lunch time. If you'd like to bring your own picnic,
please feel free to do so.

The admission to the museum and the Swap Meet is FREE !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA
to take part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north
of Salisbury NC, and just off of I-85. Look for the large brown signs that
will direct you to the North Carolina Transportation Museum,
SPENCER SHOPS.

Remember Spencer Shops doesn't open until 9am, there no need to get
there early.

I hope to see a lot of BA's there.

73, Ron

3935. TRADE: Astron PS for ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-17 00:00:00 UTC
From: tje@usol.com
Message-ID: <358a35aa.15228672@news.usol.com>
Source record: 103628
Cross-posted to: rec.radio.amateur,rec.radio.amateur.boatanchors,rec.radio.amateur.digital,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.cb,rec.radio.swap

Have an Astron RS-20A power supply that is surplus to me. Would like
to trade it straight up for something I could use such as:

Memory Keyer
HF Transmatch
Drake W4 wattmeter
25W synthesized 2m rig (older models that will tune current splits)
Video Capture card for my PC that I can plug a cam corder into
Stack of blank CD-R's
10" Table Saw

or let me know what you have. I am NOT interested in any converted
commercial uhf/vhf FM stuff, have no use for it.

Any body ever heard of this radio??

Delta 500 Transceptor SSB transceiver. Light blue in color with matching speaker. Owner said it was made in Brazil. Covers standard ham bands. Tube finals maybe more. So far I have been unable to find any reference to this unit. Perhaps it was an all band radio made for the CB crowd? Anybody familiar with the Delta 500 Transceptor SSB radio? Anyone have a manual?

Thanks in advance and 73,
gary

Source record: 103641

Kenwood TS-820S with digital readout and CW filter in excellent condition.
This radio operates like new. You would be hard pressed to find a nicer rig
than this.

I also have the matching desk microphone, external speaker with filters,
antenna tuner, and external VFO. Includes all manuals, and original boxes.
I have a reproduction of the service manual for the radio.

I want to sell the station intact. If you are interested please contact by
email and make an offer. I will sell to the highest serious bidder.

Thank you in advance,

Gary Hawkins

The HT-40 had 75 watts *input* power, not output. All the other info that
Don provided is correct. When I first got my license in the early 70s I
bought a Heath HR10 novice receiver and used a homebrewed transmitter. Then
a couple months later I found the HT-40 / VFO / SX-140 combination used for
about $80. I realized that it was Hallicrafters equivalent novice station.
The receiver was excellent, much better than the Heathkit that I purchased
brand new. I used that rig all while in high school, after I got my general
and advanced tickets. Although I no longer have it, that rig started me on my
Hallicrafters boat anchor collection.

73s
Tom

F/S A Swan 350 w/117XC P/S. P/S works fine and rig rcvd good but had shorted final so got a good final but never tried it out after that. Neither of the 2 500's have been checked out nor have their P/S's. One supposedly works for sure and the other is questionable. In addition, there are 2 ea. 12 volt supplies which have not been tested out but, again, reportedly work. All units are in cosmetically good shape. My guess is that one or more tubes per unit will fix all but really don't know at this point. Had visions of repairing and selling but handicap requires that wife do all the lifting and carrying and is just too much for her so want to sell all. Asking $300 for the whole thing but you would have to do your own shipping. e mail me if interested at berthl@juno.com

Hi,

I recently bought a Technical Materials Corp GSB-1 Single-Sideband Adaptor. It apparently is a SSB adaptor for one of their receivers (the model 90?).

Would anyone have info on what I have here, what IF frequency is it operable with and what, if any, value does it have. Thanks for any help.

Pat, WB9GKZ Green Bay, WI

Joe N0IAT <joentam@yahoo.com> wrote:

: You guessed it - I wanna know "how to". Also, is this as good as Ten Tec in
: full bk in?

Joe,
I don't know what Drake told users then, but my guess is that it involved
using a separate receiving antenna, and either fast AVC or disabling
the AGC and setting the gain manually with the rf gain control.
I doubt that they used a relay to mute the receiver but that is a possibility,
since there is a mute connector on the rear panel.

Fantastic receiver, even today, stable. If only the vfo didn't go 40 Kc
per revolution!

Hi guys;
I have a few heathkit units for SALE:

Heathkit SB-300 rcvr, manual, a few mods, plays but needs probably some work, no feet, wrong main tuning knob. The past owner put on a spinner knob. Everything else is original. Somewhat dirty but not GRIMEY, will clean up to excellent condx, I cleaned just a few areas just to make sure! Weight is 22lbs Price is $75 plus shipping!

Heathkit HW-100 w/hp-23A supply, not used in a long time, very dusty, no manual,
all rubber drive belts were dried out and broken and will need replacing, everything else is compete less some cabinet screws. Unit Recves but not tested on Xmit as no belts makes that hard to do, Hi! all knobs are original but aluminum inserts missing on three smaller knobs. Unit will clean up real nice, front panel is exc. along with cabinet. Price is $150 plus shipping.

Shipping is from 11758

3972. HRO filter crystal or info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-18 00:00:00 UTC
From: rvmj@enterprise.net
Message-ID: <358957ac.48906@news.enterprise.net>
Source record: 103466

Greeting to all on the "boatanchors" group.

I recently acquired an HRO receiver, in very good original condition, that had been stored unused for perhaps decades. Only the power lead has been replaced, everything else is original. I carefully brought it to life using a Variac, only one B+ decoupling capacitor was lost. It has steadily increased in sensitivity, and now receives really well. I don't have a complete set of coils, but can receive from 50 kc/s to 4.0 Mc/s, except for 100-200 kc/s.

Unfortunately this particular model had the plug-in crystal filter, and this is missing on my receiver. I need either an original crystal - does anyone have one to spare, or know of a source - or sufficient details to have another one cut.

I have a suitable holder (1 3/8" dia, 9/16" deep, pin spacing 3/4") but need the info to get another one cut, failing the acquisition of a genuine National crystal.

Please help as I am eager to keep this receiver as original as possible, so would prefer the first option.

Many thanks.

3973. What's to define a 'boatanchor'?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-18 00:00:00 UTC
From: aki@ix.netcom.com
Message-ID: <6mbteu$ao2@sjx-ixn3.ix.netcom.com>
Source record: 103467

June 19, 1998

As I understand boatanchors to be primarily vacuum-tube sets and equiptment prior to transistors.

I have started to collect transistorized "portable" all-wave sets that sort of belongs in the twilight-zone of being not too diferent from an equivalent tube type all-wave sets. The advantage there in the sets were the big elimination of heavy filament voltage batteries and using lower voltage "B" dry cells. Otherwise, they were still heavy for the function they served. The innards were still laid out like for vacuum tubes.It's like the earlier automobiles that were still designed and looked like they were running without their horses. What would be the proper category for these sets. I think they may fit in the 'boatanchors' group for discussion.

Yep mine does 40 Kc too. Never noticed before... hmmm

Comment about QSK... Hate it ! Even the new stupid state jap radios make CW sound mushy at 45 wpm. The best sounding CW sigs are always relay controlled via a PTT - errr sorry, a
PTCW switch. These rigs always generate bright sharp crisp notes. Just like it was coming from an audio oscillator in the room.

What's worse than QSK? Using QSK with a poorly adjusted bug... man, it hurts my ears jusss thinking about it.

Any real CW op will tell you QSK is highly overated. Correct use of Q sigs and pro-signs plus a little CW courtesy goes a long long way.

Oh yea, 2B is a great RX'r. I use mine with a EICO 723/722 TX'r - (relay controlled of course...)

It was the cat's meow in 1964.

A few days ago I informed our radio community via newsgroups about Neil Marlowe and his lack of response to a radio I bought from him. Well, yesterday I heard from Neil and he told me his circumstances. The radio he promised was received in near mint condition today.. He asked that I remove his name from the blacklist. His quote...I have no problem with Neil Marlowe sometimes things happen that are out of our control. So he has my confidence restored and made good by expediting the radio to my house. Thanks Neil and It is probably a good idea to exchange phone numbers. We all take chances on here..I have bought 15 radios off the newsgroups and Ebay and so far I have been lucky. So I am sure if you buy a radio from this man my new experience is to say "Communication is key. We have closed the deal and I am satisfied.

Rick: Your 40 kc per revolution comment caught my eye. I have a much
loved 2-B here. Mine goes about 7 kc per revolution. I'm wondering
if the previous owner did a mod, perhaps installling a reduction drive
in the dial mechanism. What say the other 2-bers out there?

3998. Drake 2B question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-18 00:00:00 UTC
From: Jeff Anderson <jwanderson@colonialassembly.com>
Message-ID: <3588f840.0@news5.kcdata.com>
Source record: 103599

I recently aquired a 2B at a hamfest that has had several circuit modifications.
The most obvious mod was the replacement of the 6X4 rectifier with SS diodes.
I removed this mod because it caused the Signal Strength meter to peg when power was initially applied, until the other tubes warmed up.
While reversing the rectifier mod I also found the following:
1) Bias Rectifier portion of V8 rewired (disconnected) an replaced with SS diode.
2) R40 connection to cathode pin 9 of Audio amp portion of V8 removed, R29 changed to 1.5K, and 10 mf cap added between cathode pin 9 of V8 and ground.
3) V8 type 8BN8 substituted with 6BN8.
4) Also a few other clipped wires, etc that I have yet to define.
The question is; was there a set of known good mods that folks used to apply to the 2B? The unit does work. I would prefer that the unit was all original, but if these mods provide improvments to the original design I quess I would be silly to remove them.
This is my first Drake, and I really like the receiver. I welcome any thoughts or insight
on this receiver.

BTW Bill: My unit also tunes at 40 kc per revolution of the main tuning knob.

Thanks -- Jeff

Source record: 103601

Jeff, check out the ARRL website for a list of Drake articles. There are some mods to the 2B there. I recently got a 2B and a 2CQ mated. The problem with the S-Meter that you spoke of happens on mine too. but what a receiver huh???.

Maybe you can let us know more about the mods that were done to the radio as you find out. You miight also want to check out the Drake reflector and the Drake list homepage, Drake still has some parts for the 2B.. Go to WWW.RLDRAKE.COM. I think the address is that.. Drake Radios are great in my opinion and the 2B is one hell of a receiver. Good Luck!!

4007. Re: Hallicrafters HT-40, SX-140

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-18 00:00:00 UTC
From: Nicholas R Kennedy <nkennedy@cswnet.com>
Message-ID: <35895016.B5ABC488@cswnet.com>
Source record: 103608

Hmmm--

I thought the SX-140 receiver was pretty bad; although at the time I was thrilled to have a ham bands only receiver which included SX in its name. (After my horrible S-119, S-120 and S-20R experiences.)

My SX-140 had some kind of variable BFO or something that seemed to work kind of like a regen control or Q-Multiplier. You could peak up sensitivity with it, but when you turned it, it also pulled the frequency by a good amount. It looked good sitting next to my HT-40 though.

That HT-40 was a great rig; my first commercial transmitter. It seemed much more stylish and more ruggedly built than competing T-60s, DX-40s, DX-60s, etc. I recently bought one at a hamfest. The case is battle-scarred but it looks great overall and I've been having fun working EU (my old HT-40 never dreamed of doing that) and other DX. I've got it paired with a VF-1 and Drake 2B.

A high school friend also had an HT-40 and he had the greatest CW note--a hard hitting thump and musical ringing sound! Where have the great, distinctive CW notes gone?

OK, back to reality ...

Nick WA5BDU
Russellville, AR

PS--I've never had one on 6 meters. I'd like to try that sometime. Any CW on 6??

4008. How to use a Drake MN-2700 Antenna Tuner?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-18 00:00:00 UTC
From: Larry Brandt <lrbrandt@statestreet.com>
Message-ID: <3589614A.7CE3F8B4@statestreet.com>
Source record: 103609
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi,

I'd like to know if someone has an excerpt from a Drake
MN2700 manual, or personal experience, that allows them
to tell me how to work it!

I mean, do you tune the "resistive" first then the
"reactive"? Do I start at the "0" lever selection
or higher? Do I peak the background noise first
before trying with any RF? And any other question you may
have an answer for.

I currently am trying a random "long" wire and ground. Is
this different if I use a G5RV with built-in balun? What about
a similar antenna but with the "official" (or a similar copy)
B-1000 balun installed?

Any help would be appreciated!

73s!

4009. Tcs-12 info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-18 00:00:00 UTC
From: Garrett Fulton <gfulton@ctc.net>
Message-ID: <6mbnv7$d24$1@news1.infoave.net>
Source record: 103610

Just got a TCS-12 receiver working last night that I had kept stored for over 20 years. What a fine old rugged radio it is, too. Was wondering if anyone has a Navy service manual or factory manual for the Collins Type no. COL-211330-A single machine dynamotor that I'm powering it with. Would gladly pay for copying and postage. Also, in place of tube V206,(det.-bfo-1st audio), I have a unit called a "noise peak limiter" mod. no. CUZ 50159 plugged into v206's tube socket. Has a 12H6 and a 12SQ7 mounted on it. Nothing about it in my Navy TCS-12 manual. Would appreciate an updated schematic copy if anyone has one that covers this unit. Transmitter still dead, no filament voltage, but I'll get around to that.
Thanks for any help.

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have
about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's
on the QRP mailing list and all have been very satisfied. Had a few
damaged in shipping and one came back DOA which I replaced for the
fellow free of charge but that's it. I am the service manager for an
alarm company and we change our customers batteries every 3 years as
preventive maintenance. These used cells should provide another 2 to 3
and probably longer service if used and recharged properly. Cells come
fully charged and are ready to go. They can be recharged with a simple
wall wart charger available at Radio Shack or a 1 amp automotive
charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

Date: 1998-06-19 00:00:00 UTC
From: Ted van Beek <tvanbeek@worldnet.att.net>
Message-ID: <6mees5$fst@bgtnsc02.worldnet.att.net>
Source record: 103494

Don't mind a rig that need TLC, or tubes, etc. But am looking for
an unmodified unit. Just something the XYL isn't going to give me grief
over. (Well, not to much grief, anyway)
73, Ted

4025. WTB: Hallicrafters SX-133

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-19 00:00:00 UTC
From: markust@lx.net
Message-ID: <6meqp7$1e5$1@nnrp1.dejanews.com>

4026. FS: Eimac 8168/4CX1000A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-19 00:00:00 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <358ADD4A.5869@hamradio.org>
Source record: 103496
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Eimac 8168/4CX1000A - "almost new" - I unpacked it, plugged it into my Collins 30S-1 and ran it for a couple of days until I got a 4CX1500B. Maybe 10 hours filament time and less than 1 hour transmitting time.

Full output - new performance guaranteed. It looks so clean that it could be mistaken for brand new - without box.

$200.00 including UPS shipping and insurance to CONUS.

Al - K8EUR
al.dolgosh@hamradio.org

4027. WTB: "Bassket Case" Collins 516F-2 Power supplies

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-19 00:00:00 UTC

Message-ID: <358ADD8C.76B7@hamradio.org>
Source record: 103497
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I am looking for a Collins 516F-2 power supply to salvage for parts. It can be with or without cabinet - just not in ashes from a bad flame-out!

I am not looking for a working 516F-2 - just a good parts source. If anybody has one (or more) in their junk box and would like to part with it, please Email me with condition (if known) and price wanted.

Thanks,

Al - K8EUR
al.dolgosh@hamradio.org

Hi All,

I have the following manuals for sale. All are
Original (not copys) in good condition.

Service Manuals

YAESU
FT-990 Transceiver

ICOM
IC-736/IC-738 Transceiver
IC-740 Transceiver
IC-751 Transceiver
IC-751A Transceiver

KENWOOD
TS-120 Transceiver, VFO-120, AT-120, PS-30, AT-120
TS-130, VFO-120, AT-130, PS-30 Kenwood
TS-520 Transceiver
TS-520-S Transceiver
TS-820 Transceiver
TS-900 Transceiver, PS-900, DS-900 & VFO-900
TS-430 Transceiver, SP-430, PS-430

Scanners Service Manuals

M-100 & M-100E Regency Scanner
BC-220 Bearcat Scanner
BC-210 Bearcat Scanner

Owners Manuals

TR-22C Drake 2-Meter mobile
T-599A Kenwood Transmitter
R-599A Kenwood Receiver
R-599D Kenwood Receiver
TS-180 Kenwood Transceiver
PS-900 Kenwood Power Supply
DG-5 (two) Kenwood Digital Display

Heathkit

HP-24 AC Power Supply
HP-23 AC Power Supply
HP-13 DC Power Supply
HP-14 Mobile Supply for the HA14
HM-102 HF RF Power Meter

HN-31 Dummy Load "Cantenna"
GD-348 Deluxe Metel Locator
HW-12 75 Meter SSB Transceiver

$300.00 for all, will not sell each.
includes shipping lower 48.

I've often thought that, should I ever bump into a Pawnee, I'd want to put it to use as one important part of my satellite station.

Which partially answers your question -- in that there's a fair amount of activity -- on the satellites -- that your Pawnee is more than capable of.

Wish I could find ten of 'em; I'd know exactly how to sell 'em off at a fat profit!

Message-ID: <359611a9.640471829@news.dimensional.com>
Source record: 103517

One of the hurdles facing us BA hombrewer types is the traditional steel and aluminum chassis. The latest issue of Sound Practices magazine contains a reference for a company called Spire Audio of California that sells both standard and custom made heavy duty chassis at a reasonable price. Their standard 17"x10"x3" adaptable-to-rack-mounting chassis is $39.95. There's other standard sizes and custom sized chassis can be made to order. The best part for us machine-shop-challenged is they'll cut any manner of hole(s) in same for a nominal fee- Yay!

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono

I have an AN/USM-117 oscilloscope which is excess to my needs. It is in good condition, but dusty. It works, but could use some contact cleaner on the pots and switches. Focus is good. I was using it up until I replaced it with a dual trace Tektronix. It comes with a switchable two input (but not dual trace) vertical plug-in, the protective front cover and the accessory lid that fits inside the front cover. I replaced the power connector with a more recent MS-type circular connector that I had because I could not find the original mating connector. There are no probes or other accessories and no manual. Standard probes will work, and a manual is available from W7FG.

I want a good tube tester. One of the Hickock family 539, 600, 799, 6000, or perhaps a TV-7B or TV-7D. Anyone have such a unit they don't need? What will it take with the scope to get it? As always, cash accepted too, $100 obo.

4054. WTB : Hickok Operation, Servicing and Tube conditions manuals.

HELP : I need an original Operation, Servicing and Tube Conditions manuals
for the following Hickok cardmatic tube testers.
123A and
AN/USM-118A or B (Military versions)

I also need Hickok Cardmatic factory punched cards for the following tubes
: 6CA7,
(6KX8 (ECC808)), 6BQ5, EMM801, 7199, 8417, ELL80, 12AT7 I could use two
each
if you have them.

Do you have any nuvistor adapters for the 123A and AN/USM-118A/B.

Folks,

does anyone have a spare audio amplifier for the RCA ET-4336 transmitter for sale? This amplifier is a self-contained, 7-valve unit - mains powered, 110V or 220V AC depending on version. Part nos are MI-11220 or MI-11209.

A friend (not on email or ng) is looking for one of these to complete his ET-4336 installation, and will consider shipping it from anywhere (he is located in the UK), provided it is working, complete and unmodified.

G'day All:

I will be moving soon and you all know what that means......many treasures will soon be finding new homes.

This is a cherry JOHNSON MATCHBOX, 275 Watt model with SWR meter and coupler. It was never modified like many of them were for the SO-239 coaxial antenna connector output. It's a bit dusty from the cellar but should clean up to a 9.5 on a scale of 10 if not higher.

I'd like $165.00 plus UPS for it. If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

Source record: 103533
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Gang:

This is a parts unit or a fix-'em-up job.....probably the former!

The meter is NG. Also the switch on he front is broken. But it is otherwise complete. The case is grungy but cleanable. This model is a hybrid between the classic Millen GDO and the S-S model. It uses the 9002 tube but has the tone oscillator in the circuit which is a feature of the S-S model as well as the more modern square meter and grey case.

Parts are probably available from Caywood Electronics in Andover MA but would be pretty pricey for cheap hams like us. Some coils are included.

I'd like $25.00 for it plus shipping. If interested please reply by e-mail.

73,

Michael, W1RC

John,

Any of the current rigs (from 1980 on) should work fine for Pactor. I've used a Yaesu 101, Icom 730 and Icom 735 with excellent results. Nice thing about the Icoms is their auxiliary audio jacks in back so you're not always having to unplug your mike.

You should be able to run any TNC with Linux as long as you have a standard terminal communications program. I don't know if the proprietary software, designed for TNCs, will work with it though.

Good Luck.

Radio Randy

I just got back a loaner Racal RA-17C. It doesn't work anymore (no smoke or anything, all functions appear normel...it just won't hear anything. Although I have the book, Racal's are not my forte, so I think I'll part it out or sell it as is for $190.. Needs? Offers? I don't care to ship the thing as it weighs in about the same as an R-390. I'm located NW of Wash. DC. Thanks.

Hello to the group,
I purchased a small boatanchor today and have no power supply info / cable. If anyone has any documentation or history of this receiver, I would be glad to pay copy & shipping costs. This radio is a multi band (7) 2-16 MHZ. It has several features such as tunning ratio of 26 turns to cross the dial and the dial is made of movie film that is held by spring loaded spindles. I'm not sure of the supply voltage or pinouts. Any help would be greatly appriciated.
73,
TNX

Will not separate. Works perfect- looks fair. Cabinets
in nice shape- but lettering is coming off fronts. Mike
is OK. Will include copy of Shop Maintenance Manual and
original owners manual. Full output finals. Has been
thouroghly cleaned inside and out- looks great (if you
look past the missing lettering, which can be replaced
with rub-on lettering). Will double box for you, you pay
the shipping. I have $380 invested, only want my money
back. Price is firm, hagglers need not write.

Shipping from 29577
Weight about 120 lbs, three boxes.

Don't forget to REMOVE NOSPAM from my e-mail address
to reply!!!!!

Source record: 103560

I have a Yaesu FT-101ZD for sale in as close to mint condition as any you'll find. It's been stored almost since it was new- it may have seen two months use. There is a tiny ding below the meter, and a tiny line of paint missing (probably skipped at the factory) on the top of the front. The included D-104 has seen better days, but works perfectly. I have the original box for the radio, and a copy of the owners manual. Will take $400 plus shipping. This one is WORTH IT! Rear panel still shiny and new! No haggling on the price- it's FIRM.

It's in Myrtle Beach, SC 29577

It weighs about 50lbs. altogether. (60?)

I will use the original box to ship, or will overpack in a larger box if you're willing to pay the Mailboxes & etc. price.

Almost forgot- DON'T FORGET TO REMOVE NOSPAM from my e-mail address before you reply!!!!!!!

4091. FISHER XFMR. WANTED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-21 00:00:00 UTC
From: Dave <gravman@netinc.ca>
Message-ID: <358CD16E.88A@netinc.ca>
Source record: 103415

Greetings!

WANTED: FISHER PUSH-PULL AUDIO OUTPUT TRANSFORMER.

I need an EXACT replacement output transformer for an older model Fisher tube type Integrated Stereo Tube Amplifier, Model X101-B. The Good channel transformer measures 130 ohms D.C. from plate to plate leads and there are NO screen tap leads. It also has 0-4-8-16 ohm speaker output impedances leads. Does anyone know what the PRIMARY IMPEDANCE really is? What wattage? 25W?

The transformer core is mounted vertically, with two stamped metal caps encasing the windings. The four chassis mounting holes are are spaced 2" by 2". This amp. is push pull with cathode bias and has 442 Volts on output tube plates.

Core thickness: 1-3/8"
Cap to Cap outside dimension: 2-7/8"
Total Height: 3"
Core Width: 2-1/2"
Overall total width: 2-5/8"
Painted Black.

The 4 output tubes are #7591, eight pin octal types.
(Need some good replacements)

There are six 12AX7's for drivers/preamps. Rectifier is 5AR4.

Does anyone have a scrapper chassis with good xfmrs?

Schematics and spare output tubes would also be helpful.

Thanks in advance!

Dave

HG-10B VFO looks real nice but has a non-stock connector so you'll have to put an 8 pin octal on it for your heathkit rig. This vfo is being sold as a companion to the HW-17 2 meter AM rig (rare). I do not get on vhf which is why I never configured the vfo to plug into the HW-17. Package only--will not split. HW-17 is mint. VFO looks very good. Both for $125.00 plus shipping from San Diego 92139. Have manuals also for both.

Hi All,

I have the following manuals for sale. All are
Original (not copys) in good condition (some new).
I decided to list them as a each price, plus shipping.

Service Manuals

YAESU
FT-990 Transceiver $35.00

ICOM
IC-736/IC-738 Transceiver $35.00
IC-740 Transceiver $20.00
IC-751 Transceiver $20.00
IC-751A Transceiver $25.00

KENWOOD
TS-120 VFO-120, AT-120, PS-30, AT-120 $15.00
TS-130, VFO-120, AT-130, PS-30 Kenwood $20.00
TS-520 Transceiver $20.00
TS-520-S Transceiver $20.00
TS-820 Transceiver $25.00
TS-900 Transceiver, PS-900, DS-900 & VFO-900 $25.00
TS-430 Transceiver, SP-430, PS-430 $20.00

Scanners Service Manuals

M-100 & M-100E Regency Scanner $8.00
BC-220 Bearcat Scanner $8.00
BC-210 Bearcat Scanner $8.00

Owners Manuals

TR-22C Drake 2-Meter mobile $12.00
T-599A Kenwood Transmitter $15.00
R-599A Kenwood Receiver $15.00
TS-180 Kenwood Transceiver $15.00
PS-900 Kenwood Power Supply $8.00
DG-5 (two) Kenwood Digital Display $8.00 each

Heathkit

HP-24 AC Power Supply $10.00
HP-23 AC Power Supply $10.00
HP-13 DC Power Supply $10.00
HP-14 Mobile Supply for the HA14 $15.00

HM-102 HF RF Power Meter $10.00
HN-31 Dummy Load "Cantenna" $8.00
GD-348 Deluxe Metel Locator $10.00
HW-12 75 Meter SSB Transceiver $20.00

$250.00 for all.

A simple and quick fix would be to purchase a twin pack of rectifier diodes from Radio Shack Part #276-1104 for .79cents. On the bottom of the tube socket, solder the cathodes of the two diodes together at pin 7 and connect the other end of one diode to pin 1 & the other free diode to pin 6. Good luck and 73, Paul

I have some CX size 18" X 1" 600 ohm globars. These are brand new in boxes. Green with silver tips. These would be excellent for some large applications. I checked with some of the supply houses like Nebraska and Antique and the prices are very high. I would take much less offers. I have 12 of them.
Does anyone know what they are used for or what they are worth??????

Never heard of an MN2700, but my MN2000 is tuned like this:
1. Set both resistive and reactive tuning to 5.
2. Apply low transmitter power, vary the resistive tuning for an VSWR dip.
3. Then vary the reactive tuning for an VSWR increase.
4. Repeat 3 and 4 until there are no more dips.

Hi Bob, I imported a scope last year via UPS. They acted as the
broker, charging $35. The package arrived in very good shape (which
was something as a surprise, given UPS's reputation for squishing
cartons).

I've also imported ham radio kits and parts via the USPS, and paid
a $5 handling fee to Canada Post.

There is no import duties for ham radio equipment, thanks to the
NAFTA. Just make sure that the sender packs the carton well and
clearly marks on the box "amateur radio equipment".

Covers 2-30 mhz continuous. Rated at 1000 watts AM. Huge vacuum variable and roller inductor. I have the actual coupler itself and the remote control unit. You provide the hookup wire and connectors. This item has been totally 100% restored and is ready for use minus what I already said. It is too big and bulky for my needs. Sell for $850 or trade for????????

You ship from San Diego 92139

Gary,

Sell it to some CBer for $100-$150, then use the money to buy a kit to
build one for 6 meters. Otherwise, you're wasting your time (and money).

Radio Randy

Have had a lot of requests for Swan restoration projects, but
to many of those required Swan-specific parts. If you have
something in the Swan line gathering dust, we could sure
use it to keep these rigs on the air. Condition doesn't matter,
but considering the current pricing of Swan equipment, cost
does.
Appreciate the help,
73, Ted

>Can anyone tell me a little about the Nat'l HRO 500 Rx?
>
>I have seen them go for around 1000.00 is that normal?

I've seen them go for as high as $3k, which is a little extreme. Even museums don't pay that kind of money for a good piece.

Value of the radio is what YOU, personally are willing to pay for it. Its that simple. If you don't, someone else might, but that's THEIR money and their value. Any other criteria are immaterial, regardless of what the speculators say.

Personally I like the HRO 500 for its nostalgia. I have a house full of radios of every vintage, and they all work at or better than their specifications, but I'll be honest, I have found very little in the way of performance to recommend any but a few of the older rigs. Collins may be an exception..and I know my Hammarlund tough to beat...but for the rest....there are better radios out there, for a lot less money. As for teh HRO's, they tend to be less than reliable in hard service. And require mechanical maintenance. Electrically, they are a good radio. Even exemplary in some ways in their day, despite their limited features. But if you have to spend a wad of cash on a radio, you can get far more radio for much less money, even in some vintage rigs.

Is there an acceptable definition of a Boat Anchor?
I have a hard time seperating "old" stuff and "Anchor"
stuff, and mainly define it by when it was new, and my
age at the time. (Mosty, if it has tubes, it's a BA)
But is this right?
Is rarity a factor? (Or should it be?)
73, Ted

4149. ALL KINDS OF TUBES, NEW+USED F.S.

Hi all,
A couple of weeks ago I posted a message about what VFO to use with the Globe Scout Deluxe. I had many great responses and thanks to all. I took the reccomendation from a couple to find either a WRL 755 or a V-10 vfo. I have obtained a mint condition V-10. Would the person(s) who said they were using this VFO with their scout please contact me. I have lost their e-mail addresses and have couple of questions.

Tks

According to a Drake ad in QST (Nov 1959 p 163) the 2A's "Frequency"
control was 2.125 inches in diameter "with adjustable 40 divisions
skirt (approximately 1 kc/division)".

4156. EICO Model 710 Grid Dip Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-22 00:00:00 UTC
From: Jim Fielden <fielden@utkux.utcc.utk.edu>
Message-ID: <6mn7agfbv1@gaia.ns.utk.edu>
Source record: 103385

Hello All,
I have a EICO Grid Dip Meter #710, I was replacing a switch in it and one of the wires fell out of the transformer. I was wondering if anyone could tell me if I could get a new transformer for it, or if someone could tell me what all the votages are on the power supply. The wire in question is a red wire, looks to come from center of transformer and goes to the switch that changes from Oscillator to diode. Looks like it connects it to a green wire that is connected to the case.
If you have one and know anyway I could get the right votage back there or find a transformer or can just tell what votage I need I would be most happy..

Tnx,
es .. 73

Source record: 103386
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.boatanchors

Hi,

Does anyone have the smallest idea regarding how a
Drake T9000E data terminal works? I know to connect
the "composite" output to video in on a monitor.
The audio in is plain. Oscill outputs to x/y scope inputs.
PTT goes to PTT. Must work for fsk, but why is there an
"FSK Keyer" AND PTT?
What are the specs for and how does the light pen input work.
Why use TTL IN?
Why are there RS232 IN&OUTs as RCA connectors and not a db25?

Any help would be appreciated!

73,

Larry

600 ohm non inductive resistors make nice terminating resistors for
terminated long wire antennas. They will handle aprox. 4 times ther
rated capacity in ssb service.

I bought a Hallicrafters CRX-103a low-band VHF receiver at a hamfest recently that, while obviously used, came in the box, with the Styrofoam packing and the manual and warranty card intact.

I've been toying with sending the card in ... it's a 90-day warranty, after all. Should I use a nine-cent stamp? And how do I answer these questions:

"Where purchased? (hamfest). Reason purchased? (add to junk collection) ..." ;-)

I'd keep that Eico unassembled -- as a previous poster noted, it's only a so-so piece of test equipment. With emission testers fairly thick on the ground at $10 or less, it's worth more, both in cash and intrinsic value, as a kit.

Source record: 103464

If the equipment is manufactured in the USA, the only cost is 7% GST tax. If manufactured elsewhere, there may be tax depending upon the country of manufacture. If the equipment is not too large, the best way to ship is by USA postal service. The Canadian postal service charges only $5.00 per shipment to handle the customs clearance etc. at this end. If it is a larger item, I have had good luck shipping by Air Canada express (if you are in a major city served by Air Canada). If you have any doubt as to duty or not, the purchaser in Canada can get a cost by a phone call to Canada customs.

I have an old cb- Johnson is manufacturer. I'm not sure of the model, but it only has a x-mit and rec-v light, takes x-tals about the size of a quarter(seperate x-mit & rec'v) and a microphone that weighs about 2 lbs(silver w/ ptt switch, looks sort of cone-ish, but with squared corners. Any Ideas?...the thing still works well.

Also
I have a General Radiotelephone x-mitter with a slide vfo rec-vr and seperate box for x-mit xtals, although there is a spot on the front to plug your xtals into. Also has a built in "q-bird" switch, for making those sounds to lock, unlock or annoy others. Both rigs work well, I have no idea if they are worth anything as an antique or not. Please e-mail any info, as my newsgroup server is spotty at best!

Thank You,
Jim Markitell

Source record: 103336
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Make that Rhombic you always wanted!
$25 EACH
I have some CX size 18" X 1" 600 ohm globars. These are brand new in boxes. Green with silver tips. These would be excellent for some large applications. I checked with some of the supply houses like Nebraska and Antique and the prices are very high.
I have 12 of them. $25 EACH
They are used in large dummy loads and terminating resistors for Rhombic or other wire antennas.
73 Chris

$125.00 for the pair. You'll need to put an 8 pin octal plug on the vfo to mate it with the HW-17. Add UPS from 92139.

Have manuals for both. HW-17 is collector quality. HG-10B is very nice to excellent.

4233. A Question for the OT's

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-24 00:00:00 UTC
From: Ted van Beek <tvanbeek@worldnet.att.net>
Message-ID: <6mr2t9$3tl@bgtnsc01.worldnet.att.net>
Source record: 103274

I'm in the process of building a TX from a 1936 QST project to
go along with my S-19R.

But I keep wondering, if you could afford the RX back then,
was there a common commercial transmitter you would pair
up with it? Or was that reserved for the people who could
afford an HRO?

As an aside, does anyone ever see a Marine (Brand) from
the 30's anymore?

73, Ted

4234. FS: MANUAL COPY FOR OS/10/U SCOPE

Source record: 103284

Have a Hammarlund HQ-180 I'll never get around to fixing up.
(I'm not a "Hammarlund person" anyway!)
It is complete and working on first three bands. Will work
on higher bands after a lengthy warmup. Needs going over and aligning.
It has been painted a peculiar copper-tan color! Dial cards in very good
shape. Looks OK under the chassis. Needs some TLC. Has all original
knobs. Looks like someone had a dow-key relay mounted in rear of
the cabinet. I have a copy of the original manual for it.

Will trade for a nice looking NC-125,NC-270, S-76, SX-96, SX-100
what have you? Sell for $100 plus shipping and packing.

73,
Sandy W5TVW

If I recall correctly, this had a filter at 20KHz which was very sharp
cutoff. Sideband selection was done by insertion of a signal either
20 KHz below or above the 455KHz IF of the receiver it was connected to.
The carrier was then re-inserted at the appropriate place.

It was reviewed in QST. See if you can find an index.

Francesco, I found a listing for the MRC-107 T communications central, in a copy of Jane's military communications for 1982. It was listed under Israel. It consists of six radios covering 2 MHz to 400 MHz, and was mounted in the back of a Jeep. I could make a photo-copy of the listing if you would like to have it. Stuart Landau K6YAZ

Anyone familiar with a capacitor brand called "Erie" or "Erie WMM"?
These are axial type, non polarized with a value of .22 uF @ 400 Volts,
20% tolerance. The parts list identifies them as a mylar. Any help or
suggestions would be appreciated..

Thanks,

Dan Langston

Source record: 103300

Hello All,

I (for some odd reason that I can't explain) have the urge to have a Collins Rig....

I think I would like to get a KWM-2 or is there a KWM-2A? Or one of the Big KWM-380...

Before I start looking, I wonder is there anywhere I can go to read about them, also I would like to find out what a fair price is for one, and what I need to look for or stay away from, like what is a winged or round, do I need a power supply, where can I find a good price on one?

That sound get me started, unless I find someone that wants to trade one for a IC-726, I would say it's going to be in Late Aug or Sept before I buy one so I have alot of time to research it....

E.F. JOHNSON 6 n 2 THUNDERBOLT.
I have not personaly tested this. I was told it
works fine. I will moneyback guarantee it.
It is complete and original.
The face of it is EXCELLENT (a word I seldom
use) The rest of the case is 8 to 9 on a
scale of ten. (Just very few, very very small
paint scrapes.)
It is as close to museum quality as you will
probably find one of these.
Comes with 2 extra NIC output tubes. (I just
made up "NIC". That means new in can. They are in
sealed cans.) $850.00.

Eugene Rippen, 105 Donnington, Auburn, CA 95603.

4263. FS: Triad Power Transformers

For Sale: a pair of Triad P7A plate and fil xfmers, vertical shell mount with data decal intact. 1250VCT at 225 MA CCS, Choke input filter and 6.3 volts at 4 amps, 115 VAC primary. Cases are in average condition and the units have been taken apart to ensure leads and innards are in safe condition. Nice for a pair of 6550 at the 120 watt output level in non ultralinear service or perhaps bridged for a Single ended triode that needs a kv or so. Also good for a lot of Ham transmitter tube projects that use 807s and 6146 valves. Fairly compact given the wattage. Would like to sell the pair for $90 plus UPS on about 20 lbs from zip 95827.

Thank you for the read

Source record: 103218

Need some advise. I have a 2" galvanized water pipe (18' long) for a mast on my tower. Worried about it bending. Thought about putting a piece of 1.75" PVC pipe inside of it to add strength w/o adding too much weight. Any idea's about how to strengthen this mast w/o adding to much weight.
Open to any idea's.

To my surprise I found a brand new Drake main tuning knob while cleaning
out my garage. It is for the B-line and has 2 dials, one for the R4B and one
for the T4B the main knob and the spring washer. My b-Line knobs are fine
so I would like to trade it for some other Drake Stuff. For example original manuals for
the T4Xc and R4B, a pair of NOS sylvania 6JB6's, Bunch of SWL
xtals or even maybe cash but I would prefer to trade. Thanks George

4302. HEATHKIT FANS -- I have questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-25 00:00:00 UTC
From: Joe K7JOE <joentam@yahoo.com>
Message-ID: <35928D52.237AE761@yahoo.com>
Source record: 103232

Hi,
Last night, I picked up a Heathkit SB-102 HF radio, a mobile power supply, model H-13, and a home brew 120VAC power supply.

This think was built in 1971, under plastic since 1975, and looks as shiney and new as if it came right from Benton Harbor. I mean, I could not find a single chip of paint ANYWHERE.

I fired the rig up on the station homebrew supply, and and it works very well on receive. Only problem seems to be three black "o-rings" that connect the front panel controls mechanically to the transmitter preselector, the tune and load capacitors. One of the "o-ring" belts was broken, the other two are pretty dry and slip on the pulleys. Hence, I was unable to transmit. Assume I can use some rubber bands or get some new O-rings at a vaccuum repair store.

SO-- what is the old SB-102 worth these days? What is the history of this rig? Shortcomings? Frequent failures?

Seems a lot like my collins KWM2, but has a somewhat more funcitonal CW operation capability.

Thanks -- thinking of starting to collect some of these Heathkits -- the prices are downright cheap and they are loads of fun to use since you can fix em easily.

Thanks,
Joe
K7JOE

Hello OM,

I have my nice little (bit on the heavy side) Globe Scout Deluxe, tuned her up into the dummy load, after soldering a few places, Ahhh a nice 45 watts out on 7049.86793 (7050 crystal)....

I have my nice little Hallicrafters SX-140 glowing in the dark and receiving beautifuly, sounds so much better than my Icom....

Now I discover that I don't know flip about T/R switching these two Glowing Wonders...

I know I've seen t/r switches that wire up for 24 volts or something like that...Could I just use a coax switch and put the receiver in ant 1 transmitter in ant 2 and switch like that? What about in a tight spot, say I don't have an ant switch, I don't have a t/r switch but I want to get on the air?
I'm sure some of you have done some wild things, or made up something neat out of the Junk Box to get the job done....

Just looking for ideas until I can come up with a t/r switch....

Tnx es 73

Larry,

The Theta9000 is a RTTY terminal. FSK is for keying an fsk circuit which shifts your vfo either 170 or 850 hz from center to establish a mark condition. PTT merely keys down your PTT and brings your trnasmitter into a transmit condition. It has been quite a while since I had one of these but I believe these also had an audio output so you could do AFSK.

AFSK is adequate in most cases, especially on VHF. The FSK keyers are all from an older time when we had KWM-2A's and shifted vfo freq directly while the xmtr is keyed down in cw. This produced cleaner fsk modulation than other methods at the time, before the advent of synthesized radios.

Be aware that RTTY duty cycle is much higher than SSB or CW. I have burned out many a 6146 running rtty.

Jojo

Hi,
I have a new in box, unbuilt HEATHKIT COAX SWITCH.
Yes. it has never been assembled.

I just opened the box to ensure all parts are in there.
They are...in nice sealed little baggies. Condition of
all kit components are excellent.

The manual is copyright 1973, but the kit is probably from
about 1978 or so.

This is a 6 position, 1KW+ antenna switch box.

$70 + shipping from zip 97123

email if interested

Well Joe

The rings are an easy replacement project.
Take what you have left to the nearest Ace or True Value Hdwe
store and in the plumbing section they should have an assortment
of "O" rings made from neoprene. The size that fits is slightly
tighter but works FB.

Those old rings they used were often made from latex and went
sour with age.
Can't help on the others as only had a HW101 and the SB401 never
a 102 although I think they are similar to the HW101. Although
I will say they are underrated as an item of ham gear. It will
keep running and running and .... easy to repair.

eBay Haters: read no further

But, if you've always wanted to own the rare Conar model 400 novice transmitter, check out:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=18453636

As has been explained several times, the reason folks post eBay notices on the newsgroups is the same reason folks advertise garage sales and auctions in newspapers - to make potential buyers and bidders aware of the opportunity. And that's the reason for this post.

73, Bob W9RAN

I go to the plumbing section of the hardware store with the originals
when I need "O" rings to repair Apple (Canon) inkjet printers.
For the larger sizes, the local tv parts wholesale store has very small
belts used in some vcr's and to slide open the tray in CD players. Bring
the originals and a micrometer (for measuring small stuff) with you if
possible. - Bill Henderson

> ...Dave
The best (and costliest) source is the maker of the equipment. Check with a local tv/radio repair shop and ask where they buy theirs, or check the ads in the back of electronics magazines (at the public library) for major 3rd party parts suppliers.
You are right about Radio Shack... I worked in their service department (Ottawa, Canada) for seven years servicing much of the product line (including marine, ham gear, scanners, pocket radios and tv's and vcr's).
There were times when parts such as rod antennas (antennae?) were not available for older or lower cost units and a substitute had to be found at the local tv/radio parts wholesalers. - Bill Henderson

Hello Gang,

I have a very nice Drake R-4C and MS-4 for sale. The R-4C has the 500 Hz CW filter installed. The serial number is 27223. Both units are
in very nice shape and play very well. There are a few very light scratches on the cabinets that cannot be seen from 5 feet away. I have
the original manual for the receiver as well. Asking $325.00 + shipping (OBO). Please feel free to contact me if you have any questions.

Thanks and 73's!

Hi mates,
Just finished parting out a KWM2A unit. Most of the good stuff was already picke over before I got to the thing, like the dial and the tubes and knobs. Here is what's left.

1. Audio output transformer $25 post paid conus
2. Complete final amplifer parts suite with tank coil, variable caps, var mica aux load caps, tuning shafts and couplings, RF choke, band switch, TR relay, metal cage, neutralization caps, filter feed through caps, tube sockets and miscellaneous hardware, nuts and screws etc. All parts are mechanically fine. No tubes.
and no top cover (yet). $60 post paid conus

3. Mike gain and switch pot $10 post paid conus

4. Function mode switch $15 post paid

5. Set of all upper chassis IF and RF transformer cans $50

6. Set of all lower chassis RF band switch assemblies, inductors, trimmer caps, and upper chassis tuning rack syste with tuning shaft and all rack slugs, and bottom shields. All items carefully removed and packed to prevent damage. Phenolic switch shaft included along with most of the mounting hardware. $60 for the works post paid conus

7. Metering lever switch $8 post paid conus

8. Plug in relay socket assembly and mounting bracket (wires still attached) sockets servicable, sorry no relays. $20 post paid conus

Tnx for the read

Looking for Millen 3" dials part no. 10008. These had 0-100 markings over 180 degrees. They had a black knob and nickel plated brass outer disk with the markings.
Also, Johnson made a similar dial in a 3" and 4" size. Anyone out there have anything like these?

Jim,

A coax switch should work fine. Lacking that, a DPDT or a SPDT switch
mounted inside a metal box with 3 SO-239 connectors on the outside will
also work fine. Just wire up the switch to connect the center
conductor of the antenna coax to the center conductor or either
the transmitter or receiver coax. You'll also want to manually
turn down the rcvr rf gain control before you close the key.

Ham Radio circuits galore

Hi all,

My brand new 233MHz Pentium computer blew up, so I have to take a rest from adding to the homepage for a while. Now I have the chance to tell you all about it. There must be about 80 different projects on the page now, from antennas, transmitters, receivers, test equipment - you name it.

My recently bought me a digital camera for my birthday so I have now photographed some of the projects as well as the PCB foils and circuit diagrams that were already there. I will be using the camera extensively in all future projects, when I can get my hands on a computer that works.

If you are interested in circuits and constructional ideas then please take a peek at

http://user.tninet.se/~acz732k
http://hem2.passagen.se
http://come.to/sm0vpo

I am unable to answer my E-Mail until I get another motherboard that does not send smoke signals.

Best regards Harry

Gents:

I came accross two brand new 175 amp/hour deep cycle RV batteries that are new. Can anyone recommend a regulator circuit that will bring the voltage of these two batteries in series down to 13.8 volts??

Someone mentioned earlier on the T-T reflector that some rigs DO NOT like operating below 13 volts...well I have a few like that hence the reason of going in series and then regulated down vice putting the two cells in parallel. Fully charged I only get around 12.7 volts.

Don't want to hash out the pro's and con's of using batteries...just wonder what type of regulator I should use that will let me have HIGH I capability.

4346. HICKOK 600 A HELP....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-26 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <1998062613061200.JAA14225@ladder03.news.aol.com>
Source record: 103180

Hello, I just bought a Hickok 600 A. Does anyone else who owns this unit have
a "standard reference " tube, like a 6L6, etc, to check the calibration ?
I've read Padgette's page, and it goes very deeply into using shunt resistors,
1000 ohm per volt meter, etc. But I am also told a quick way to get an
idea of it's calibration status is by using the ref. tube method.
Opinions sought, and highly appreciated.

Thank you,
Joe Pratt, Tubecntral@aol.com

Source record: 103185

Lane,

I believe that your best bet would be to go with a "switching" regulator. A linear unit would waste 1/2 your power in heat. The only trick is finding a switching unit that doesn't create alot of "hash" in your HF receiver.

Astron made a unit that was good for 9 amps cont., 12 amps int. but I'm not sure what the RF noise was like. Newmar makes several units (with, I assume, good shielding since they are designed for marine electronics), but the are EXPENSIVE. If cost is no object, I'd opt for the Newmar.

Radio Randy

Bendix TA12C WW2 aircraft transmitter. In very clean condition, and working. The TX uses a pair of 807s in the final, and an 807 buffer. It has 4 separate VFOs, and is set up for amateur use. The mechanics inside it are better than the BC348s. Comes with case handles, and shock mount bottom. Its lightweight, about 40 pounds. A military radio collector should get hours of fun using this rig. I have circuit diagrams conversion information etc. $110.00 plus shipping and packing. OR - I am looking for a decent RME45 or 50 receiver, or might consider trading on an SX62.

4355. WTB: Yaesu FT-70

Looking for an old Yaesu FT-70 (any version) HF Packset. A non-working "dog" would be OK with me if the price is right. The unit must be physically complete (bad or missing battery= OK; no battery box= not OK). Original speaker-mic, LSB filter and manuals not essential items. I might consider an absolutely mint unit. Not really interested in accessories.

From: jonweiner@aol.com
Message-ID: <1998062620391900.QAA02472@ladder03.news.aol.com>
Source record: 103191

I am selling two receivers surplus to my needs:

1. R-390A. E.A.C. manufacture on label, serial #884. Complete with top and bottom covers and meters. Works fine, but front panel is a bit dirty from shop use. No marks or extra holes. $400.

2. R-390. Collins manufacture on label, serial #1644. Complete except for meters (I have them - just haven't found them yet). Top and bottom covers. Complete and in good condition. I haven't powered it up as I don't have the power cable. $200.

Both radios are for pick-up at Greenville, SC, as I have no desire to pack and ship these BA's. I may also be open to interesting trades.

Jon, K1VVC

Collins P/N F500Y70. 7khz @6db, 19khz @ 60db, 500khz center IF frequency.
$20 shipped.

4367. Re: Collins KW-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-26 00:00:00 UTC
From: Radio Randy <rjones@plix.com>
Message-ID: <359453A6.ED7@plix.com>
Source record: 103201

The fewer characters in the model, the more expensive eg. the KW-1 is $20K but a KWM-2 is about $750. I just sold a 302C-1 wattmeter for $310, etc., HI.

In this case, the KW-1 is a VERY rare radio and easily commands this price (among collectors).

Radio Randy

I was talking to a ham in Pittsburg. He had a friend who was offered a KW-1 FREE as the owner was moving to FL. He thought about it for a few weeks. Finally, the owner calls and says "you have 2 hours to get over here and pick up the equipment or I am leaving it on the curb for the garbage man". Needless to say, he went to pick it up. Now, I wonder what happened to that radio????

I would like a Drake TR7 in good working order.
EVERYTHING must work.
Would like to work out a trade for my TR4C or Kenwood TS530S.
Just in case you don't know, the 530S has the WARC bands and is solid state up to the driver & finals. Also has the CW filter.

Both in 8 plus condition and have manuals. The 530 has the service manual.

Low on cash these days so have to work out trade.

Thanks for reading

I am helping a new ham get a National NCX-3 back on the air. Radio was working but the power transformer is shot. Might be able to rewind it but this is a multi-tap beast and I never had much luck with those.

I am looking for:

1) Replacement Transformer or

2) Info on the Jones plug so I might be able to give him one of my spare Swan 117-C power supplies or

3) He might be willing to buy a new power supply if one is available.

To all who may be interested, I have talked with George about this transmitter. He has everything with it, including the tools and some history. Mine is nice and complete also(a few dings in the cabinet paint), and I wouldn't sell it for $25k. His sounds even nicer than mine, so this makes it a good deal. ;) Just ask the Radiogouger...umm... finder the amount he's selling his and the one on comission for. I'm sure you'll be amazed.

This is certainly a wonderful radio to own - a joy to operate and an absolute work of art to behold in operation or idle. These rigs deserve to be used on the air, not stuck in a corner as a 'trophy'.

Good luck, George.....if I had the money.... ;)

I have a very clean R4C (#19425) and T4XC (#28477) for sale. Also
have the AC4 and original manuals. The R4C has the NB, 500Hz, and 1.5
kHz
filters. $390 plus shipping. Thanks, Markus.

4401. FS: Vibroplex Vibrokeyer $50.00 shipped

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-27 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <6n1d4u$i9e$1@nnrp1.dejanews.com>
Source record: 103207
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

For Sale: Vibroplex Vibrokeyer

This is the single-lever model.

Base is beige and the s/n is 217272 and the address on the brass plate is 833 Broadway. Fingerpiece and thumbpiece are red.

Flaws: Small red plastic cap on top of yoke is missing. Beige paint is rough. There is a dime sized blemish on top of the base. Neither flaw affects the key's operation.

$50.00 shipped to your door.

Thanks for the read!

Whoever R&D Corp of Ambler, Pa is ought to know by now that a long post of all that semi-conductor crap is not wanted by many persons who subscribe to this list. I have no problem with people wanting to sell something on this list because I do it from time to time myself; but at least I have the decency of either asking for someone to ask for an Email list at a later date, or direct them to a webpage where they can read it at their leisure if they are interested.

I, for one, am disgusted at receiving pages and pages of email crap that I did not solicit or want..... Ambler, PA, give us a break and learn how to use this reflector in a way that will not alienate the readers.

Am I the only person who feels "invaded" with a rash of crap like that post on 6/27 from Ambler, PA?

Terry

Allied Industrial catalogs 1969, 1970, 1971, 1972. All in nice shape.
All four for $20 and postage.

Complete illustrated original manual for an I 137B signal generator
(1/45) $5 and postage. Good condition

Complete original manual for SCR 509 and SCR 510. This is the portable
BC620 field transceiver system. (11/43) $10 and postage. good condition

New in Box, 110 Watt soldering irons. WW2 surplus. These are 24Volt
models but can easily used with the help of a fixed 24v transformer
or a variac. Really well-built with expensive heat resistant cords.
$8 each plus postage.

J55 1/4 inch, 2 connection plugs. Great for headsets and keys.
Solid brass with bakelite sleeves. The best ever made. Good used
condition with solderlugs 10 for $5 and postage.

Thanks

I must soon move, and have too many projects. All are in Maine, and I'd like to do as little shipping as possible - reasonable offers not including packing/shipping (especially the heavier stuff) considered;

- SX-25 - all there, not working, cosm fine, dirty;
- S-76 - al there, not working (blv problem in IF subchassis), cosm nice, clean;
- HRO-5TA1 - cosm 8/9, works fine, has correctly-done xtal cal mod, A-E coils, doghouse supply, Orig spkr has (2) toggle sw's installed, manual;
- HRO, initial months of mfg, 5 coils, cosm 9 1/2, works fine, doghouse supply, manual, orig style spkr encl w/NOS cloth ready for new spkr, expensive;
- NCX-3 xcvr w/AC supply/spkr also DC (mobile) supply, manual copy, lights up & cond unknown, xcvr is a 7, AC supply is a 5;
- HT-40 xmtr, known to need pwr xfmr, NIB spare final, manual;
- AVR-101A small WW2 aircraft RDF rcvr (VLF), cplt w/orig connector;
- AVT-112 aircraft xmtr (small) & orig RCA vibrator supply - xmtr has easily-straightenable dent in top of back cabinet;
USM-117 dual-trace 'scope, lights up, no trace, clean & orig pwr cord, no front cover;
- Late '50's/early '60's Schaller Echo Sound echo chamber, very rare, mfg in Germany for Ampeg, (3) mixed inputs, needs O-ring drive belt for drum (easy), I used it all through the '60's onstage;
- Kenwood TK-250 SS stereo amp - bought new Japan '69, international model, one channel out, have original schematic/docs;
- SP-600-JX, cosm 6/7, partially recapped, Low bands fine, needs cap under RF deck to get upper bands (you do it) - rest of 2nd conv osc fine.
- BK-E2000D sig gen, RF OK, Modulation not working, clean.

Email only, please.

4426. Ameco AC-1 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-28 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <359685d9.2176197@news.fast.net>
Source record: 103153

A former coworker passed away 2 years ago and his family is liquidating some of his electronic gear. They located an Ameco AC-1 transmitter kit, unbuilt, still in the box (opened). I have no idea what it is worth, although I recently saw a built AC-1 going for well about $150 on Ebay (yes....I know that the prices tend to go high there). Anyone have an idea what they can get for this unit? There's other boatanchors and test gear there, some of it I have ideas what they should sell for. But the Ameco has me baffled as to its value. Any suggestions?

Thanks in advance,
John N3AB

>to be used on the air, not stuck in a corner as a 'trophy'.

At $25.000 I could only see it as a trophy, because no radio to be used as a radio is worth $25.000 you're not selling a radio you are selling a trophy. I know the Collins is fine gear, but a radio that only works from 14Mhz up, at it's best could never compaire to a top end radio today that could be had for $2500.00, and even if it does, even if it's 1000 time better than a new radio, at $25.000 it could only be a radio for the few that could spare $25.000 for a radio, who would look at it as "art in operation or idle." that would be "a 'trophy'."

I would love to own, and hope to own a Collins someday, but still, at $25.000 it would only be a trophy.

John,

Good question. Rumor mill has it that an un-built Knight-Kit "Ocean Hopper" was offered for sale at Dayton several years ago for over $1000 - whether it sold or not is another question.

I think the "simple" receivers and transmitters are more likely to hit "Cult" status than are some of the regular boatanchors. It is the "First Rig" syndrome, as most Hams and SWLs had something simple before advancing to the SX-99 or whatever.

You are right about eBay prices. At a hamfest or in a junk store, an "Ocean Hopper" would not go for $300+, an Ameco AC-1 would not go for $150, and a J-38 would probably not fetch $75+ (new in box Lionel model). The eBay concept opens "collecting" to those who have the $$$$$ but would not normally have the time or motivation to haunt the hamfests and junk stores. It also places items on a global auction block and maximizes the theme that "One persons trash is another persons treasure." If the right "one person" sees the item, the sky may be the limit. EBay exists and I believe it drives its own prices, and perhaps, external prices as well.

Sometimes, you never know - "Ocean Hoppers" draw high bidding; yet, "Space Spanners" appear to be more common and get lower dollar figures.

Back to the AC-1.....

I have one and have corresponded with others about their units for several years. Typically, (up until this last one) they have gone for $50-75 to those who were really looking for them (nostalgia stations). On the other hand, during that same period, folks have picked them up for less than $25.00 at hamfests and the seller still made a 100+% profit!

If the seller is after money, put it on eBay. If you're looking for it to have a good home, cared for by someone who remembers the good ole' days on 7175 KCs, let me know and I'll give you a few bucks for it. (And, it will sit next to an "Ocean Hopper"!!!)

Jim:

I have seen a lot of dead animal type trophies hanging on the walls of dens... their antlers being used for hanging one's hat. I guess a Collins KW-1 could be considered a trophy... but at least it can come to life, hum, get warm, and even carry your words around the world... and if need, hold a hat or two.

Buying this a KW-1 isn't purchasing a trophy, its investing in a piece of amateur radio history (that is operational).

Like the saying goes, if you got to ask the price ....

Well, I think the SB-102 was a gold plated HW-101. The HW-101 kit the
kit builder built the VFO. A variable cap. was used to tune. I
remember spending a very long time linearizing the VFO so that the
dial would track the tuned frequency. The SB102 used a factory
assembled PTO (permability tuned oscillator). I think the PTO was more
stable and the tuning was linear. In addition the tuning and readout
mechanism on the SB102 was of higher quality. The SB102 had a few more
bells and whistles. I don't remember what they were. I think one was
that the SB102 could be used with a remote VFO. The PCB in the HW101
and SB102 were the same. I remember some jumpers and unpopulated areas
when building my HW101. I do have some old heath catalogs but they are
buried deep in my archives!!

Not that I want to been seen defending spam, but USENET is a public bulletin board system. If you have a news-to-mail arrangement, I can see how this sort of post would be a nuisance. That is why most users read USENET via a news server and a newsreader. Even this group with its light traffic would fill most mailboxes beyond all manageability. Can you access USENET the conventional way? That is the best way I can suggest to solve the problem. I didn't see the post, and if it was longer than 20K or so, then I would agree that a commercial post of this type is innappropriate, even though given this group's charter, an ad for semiconductor devices is as appropriate a commercial post as is conceivable.

I would like a Drake TR7 in good working order.
EVERYTHING must work.
Would like to work out a trade for my TR4C or Kenwood TS530S.
Just in case you don't know, the 530S has the WARC bands and is solid state up to the driver & finals. Also has the CW filter.

Both in 8 plus condition and have manuals. The 530 has the service manual.

Low on cash these days so have to work out trade.

Thanks for reading

Hello Jim:

I think you may be mistaking the model numbers. The KW-1 was a large transmitter about 6 feet high and operated on all HF bands. The KWM-1 was the first Collins transceiver and operated from 20 meters on up. The KW-1 has only about a hundred (or less) left in the world, and they are prized by the most rabid, die-hard of Collins collectors. They don't really buy these radios as item to add to an operating station for daily use, but for their value as an example of the manufacturing process and rarity of the piece. I agree, they aren't much more than a "trophy"....sort of like having a stuffed deer head on the wall.

Most of the Collins stuff in the average ham shack is bought and used by folks who are interested in preserving the equipment and operating it as well. I have a KWM-2A and an S-Line that is almost 40 years old. They still work really well, and I get very flattering signal reports.

Comparing it to the motorcycle world, Collins is like the Harley Davidson compared to a Honda or Suzuki. If you are 21 years old, what you look for in a bike is a lot different than what you look for when you are a 55 year old Shriner!

I hope that yopu have the chance to own some nice, well cared for Collins sometime, as it is really great equipment.

All the best!
Lee Smith

>that would be "a 'trophy'."

1) Part of its uniqueness is it does 100% plate modulated AM at a high power level. A modern ricebox, no matter how pricey, can't play "real" AM like the venerable old Collins, and certainly not even close to that power level.
2) It only works from 14 Mhz up? No, it does all the major HF bands.
3) To put the price in perspective, a currently-manufactured 1 KW AM broadcast transmitter will set you back at least $10K.

Yes, but broadcast transmitters of the same vintage as the KW-1 (and quite a bit newer, in some cases) are going as cheaply as free to 1K USD, tops.

The KW-1 will work on all non WARC bands (and probably WARC bands too with the appropriate VFO input/mods) but it must run at reduced power (about 500 watts input) on 160 meters. That power level can be matched by a modern rig and a linear. This combination, appropriately set up will exceed the KW-1 in audio quality.

I think the price is entirely reasonable. Heck- twenty or twenty-five kilobucks for a collector-quality limited edition vintage car, a classic airplane or antique furniture is nothing today.
And, really, the purchaser should put it on the air.

Except when one pays that much for a radio, they are loath to put it on the air for fear of burning something up. I've seen a direct correlation in the selling prices of the KW-1 and the numbers heard on the air. In the early and mid-80's, I remember hearing 5-10 on the air regularly and another 10 or so to a lesser extent. Recently, I can only think of one that I've heard in the last year. Coincidence? Sounds like an X-Files episode.

4459. Ameco AC-1 and unbuilt "Ocean Hopper"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-29 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199806291255.FAA19104@m1.sprynet.com>
Source record: 103090

I recently picked up an Ameco AC-1 at the Princeton, IL hamfest for $5.00. It's in fair condition, so these things are around. It's like the earlier postings; I saw them advertised when I was just getting started in radio, and I've been looking for one for some time.

The rumor about the unbuilt "Ocean Hopper" is true. It was offered by my friend Bill, KY9M, at either the 1994 or 1995 Dayton Hamvention. He purchased it from an older gentleman who was cleaning up an estate. Bill put the $1,100 price tag on it just to get a rise from the general public. Looks as if he succeeded. BTW, he sold the unbuilt "Ocean Hopper" at auction the following year for less than the $1,100.

In all likelihood it would remove the tarnish but I wouldn't recommend it for use on anything like tube sockets. The problem is that the Tarn-X will wick between faying surfaces and stay there, causing corrosion later, as its residue is hygroscopic. Even immersing in water to clean out the residue may not work.

My personal opinion is that Heath equipment is great. I have been buying
their equipment since about 1968 and have never been disapointed. Their
equipment is not necessarly premium, but it does work good. I still
have by Twoer and Sixer, and they still work. Right now I am running
a HR1680 Receiver with the matching HX1681 transmitter and speaker.
I use the HD-1410 iambic keyer. The pair runs full-breakin and is easy
to trouble shoot. I bought the whole setup, as a kit, back in 1982
when I was operating from Germany as DA2EU. Made a lot of good contacts.

For more information on Heath products take a look at
http://members.accessus.net/~dwentz/kb9jja/heathkit. They have

lots of info, complete with service bulletins, modifications, parts sources, etc..

Dan:
Erie made a lot of capacitors, and probably was best known for ceramic caps. They were, I believe, bought out by Murata (see http://www.murata.com), and under the name Murata/Erie made mainly chip capacitors. Murata seems to have dropped the "Erie" name.

Anyway, what you have there looks like a mylar capacitor, all right. Any mylar cap of the appropriate capacitance and equal or higher voltage ought to work fine. No mylar caps are polarized, although some mylar and paper caps have a band at one end indicating "outside foil"; that end should go to the grounded side of the circuit in bypass applications for best shielding. For coupling applications it doesn't make much difference.

Hello, Tubecntral is online for Email requests for any of my vast stock of new and only strong used vacuum tubes. No minimum orders or excessive shipping charges. I stock all types, but the stock varies due to constant sales and restocking. Therefore, a simple catalogue is not available.
But I know what I have, so if it's something as simple as a miniature radio tube or something like matched audio tubes, it's most likely available. European types also. I guarantee everything sold, and I'm the only guy here, so it's custom person to person dealings. I also have antique NOS resistors and caps, and copies of original transformer catalogues . If you have specific requests for tubes or anything else, please leave them in my E mail box.
Thanks to all !
Joe Pratt, Tubecntral@aol.com

The SB102 came several years before the HW-101. In fact, there is a whole SB family and accessories.

Back in 67 and early 70's For SSB, you either had a Collins KWM-2, National NCX-5, SWAN 270, 350,or 500, Hallicrafters SR "ill wind" radios (Cyclone, Tornado or Hurricane) and if you could not afford them, you could always build a cheapy tri-band EICO 753... but the best rig you could build was the "Grief Kit" SB102. They were everywhere.

During the 70's, it was THE radio to own. But soon, the japs started to invade.. so the Heath Company came up with the HW101 (an economy SB102). It sold well enough until the FT101 came. Now for the cost of a kit, you could afford a factory built radio.

That was pretty much the end of the American Amateur Electronics Industry.

Today, you can just walk in, buy your radio, use it a year and throw it away. Just lke a computer... (and THATS the real reason why they have CPU's inside them.... hihi)

My Henry 4K-2 died recently. I'm in need of two 0.1 MDF at 7500VDC caps for it. A single 0.2 or 0.15 at the same voltage would work. Could someone out there provide such a beast or point me in the direction of a supplier?

Thanks,

Jim

Touche'

I agree that collectors are driving values clear out of site, but then again, any time there are only a few of one model of radio out there (<25 or so) I can understand why the prices are so high. I STILL don't understand why Catalin radios are worth so much???

Just the same, when I asked what my old Collins wattmeter was worth (I paid $5 for it) I was shocked at offers of $300 and more for it. I HAVE a REAL job ($50K/yr) but I'm not STUPID. Had I a legitimate use for it, I would have kept it. As it is, I'm passing along some of my good fortune to the folks I bought it from.

Beauty is in the eye of the beholder.

Bob,

My guess is that the zener (and possibly the other diodes) is regulating the filament voltage to reduce drift in the VFO. It's obviously not a "factory" circuit and chances are the previous owner did not note it on the schematic.

Source record: 103028

you guys are NUTS! or maybe just in the business of blowing your own horns.
great con-job pumping up the value of an old radio!
keep it going guys, push the price up to 30gs
and even higher! there will come a time when even if you had to sell it no one
will be able to aford it. always nice to have an old something or other lying
around that is worth a million bucks but no one wants to buy it. im not sure
what all the fuss over a KW-1 is any way. for an amateur x-miter its a nice
example but it doesnt begin to compaire with some of the comercial or mil stuff
around at a fraction of the price! give me a T-368 with proper audio mods and
i will run circles around your KW-1. i used to have a KW-1 and used it for
over 15 years, but i sold it to a friend back in 1993 when i got my T-368e.
the KW-1 will struggle along at something less then 800 watts carrier power and
my T-368e has no problem putting 600 watts to the antenna. now lets
compaire... 600 watts cost me $500.00 and your 800 watts cost $20,000.00 ,
seems to me to be a no brainer! is your s-meter going to know who's got 600 or
800 watts? if someone doesn't tell you there running a KW-1 are you going to
tell by the audio? who in there right mind would spend that much money for a
rig you can only use part of the year and only in a few places on the bands,
again NO BRAINER! so for all you KW-1 owners, have fun and for the ones who
would be looking to sell, GOOD LUCK.
for the guys out there who would like to own a KW-1 save your money! you know
i sat an looked at mine doing nothing for 90% of the time, and thats just what
all the rest of them are doing! so for all you wana-be AM-BIGSHOTS spend
$500.00 or a $1,000.00
and sit back and look at something doing nothing for 90% of the time! doesn't
sound as bad as having a $20,000.00 WHITE [black] ELEPHANT.

Hello, I have the following European audio tubes available for immediate sale. All tubes fully tested. The used tubes test very good, satisfaction guaranteed apon arrival. The new are just that, and of course also are very good. Due to handling, some of the used may have slightly tough to read markings, but plenty to confirm the identity. These are ONE TIME sale prices, subject to change in the future. Thanks to all of my satisfied customers in the past. FREE SHIPPING in USA on orders of 50.00 or more, others pay true freight. I have PLENTY MORE where these came from, so if you don't see something you're looking for, email me with your requests. Thanks, read on....

It seems that things are relative to what they are.
A 1957 Chevy Belair convertible in pristine condition is worth $50K
and a split window 63 Corvette with fuel injection is worth upward of
60K. Look at the hefty prices they paid for Jackie Kennedy's momentos
How about 5K for a baseball card? or 2K for a Mickey Mouse watch. For
some people it's a "gotta have it" and to the seller that is music to
their ears. Personally I love Collins too and if I had the bucks i'd go
for it but I will be happy to vicariously enjoy seeing someone else have
it. When I was 15 years old I looked at Collins but couldn't afford it
so I just dreamed about them...40 years later I find that things haven't
changed too much!

Now there's a misunderstanding if I've ever seen one...

First, a post asking for the value of an unbuilt Ameco.

Secondly, a response (seemingly innocent) suggesting that the person making the post MIGHT be looking for offers to buy the radio (which was, most likely, going to be his NEXT post anyway).

Lastly, an insult thrown in the face of the person who posted said response.

I saw nothing in K0MB's response that could have been interpreted as being unfeeling and/or insulting. I might have made the same kind of response, myself.

Am I missing something, here?

Sure, and tell us all that you would REFUSE to sell one of YOUR radios
for $20K to a "rabid" collector, HAH!

After finding out what a 302C-1 wattmeter was worth, I put it up for sale
immediately. At least, I know it's going to someone who will really
appreciate it.

Wanted - unbuilt vintage tube-type ham and hi-fi kits.

I'm particularly looking for an unbuilt Heath RX-1 Mohawk receiver.
I'll pay serious cash or trade my 75A-4 for one.

Not a dealer or re-seller, just someone who is crazy about kits from
the 50's and 60's.

Any place that sells o-rings -- hardware stores, etc. will have
something that will work. Take an original along for size comparison.
Its also possible to use dial cord. I wouldn't use ordinary rubber
bands -- too "stretchy" and the heat will wipe them out in no time.

> SO-- what is the old SB-102 worth these days? What is the history of
> this rig? Shortcomings? Frequent failures?
> Seems a lot like my collins KWM2, but has a somewhat more
> funcitonal CW operation capability.

The SB-102 wins the CW wars against the KWM-2 hands down. It can also
take a 400Hz CW filter which the Collins could not. If you can't find
an original, there are new ones available from International Radio.

I built an SB-102 in 1970. Great radio. Used it for over 10 years.
Just bought another one that someone else had the pleasure of building.
These seem to range in price from around $125 to maybe $200 depending on
what you can find and the phase of the moon.

Everthing you ever wanted to know about this radio (including service
bulletins, etc.) is available on the net. Just do a YAHOO search on
"Heathkit" to find some starting points for links.

Enjoy ...

4516. Where are the Boat Anchors?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-06-30 00:00:00 UTC
From: Jeff Goodspeed <cmsx42@email.mot.com>
Message-ID: <35992657.5C16281B@email.mot.com>
Source record: 103047

Greetings:

I have gone through many Boat Anchor (BA) rigs in my time. I would pick one up at a local hamfest, make it run again, and sell it the next year for another Boat Anchor. They used to sell in the $100 range making them affordable. Iï¿½m not a ï¿½collectorï¿½ because I never had much of an inventory at any one time. I didnï¿½t focus on one brand and I didnï¿½t keep them forever.

Iï¿½ve been relatively inactive for a few years but now my interest is rising with the sunspots. Recent forays to the local hamfest dredged up no Boat Anchors. Where have they gone?

I understand there are hams who collect pristine examples of Boat Anchors and want to fill out their collections. These people would not accept equipment that was a little worse for ware or had been modified. I remember that most of the Boat Anchors Iï¿½ve seen at past hamfests fell into that category. I also canï¿½t believe there are as many collectors as there were rigs manufactured. I canï¿½t imagine literally tossing one of these old beauties into the trash. So where have these radios gone? Are they sitting in the bottom of peopleï¿½s closets collecting dust because the owners donï¿½t thing itï¿½s worth dragging them to hamfests just to drag them back home again?

Do any of you know what became of this great old fun resource?

Thanks - Jeff

I was contacted by an 'x' ham who wants me to liquidate a box of tubes
he has. I KNOW the following are in the box -- highest bidders get the
items, will post more details when I get things sorted out.

4CX250 2 new, 2 used, more with unknown condition
6146B 4 new, two not in boxes but have 'new' look

Numerous other large tubes marked "Eimac," numbers obscured.
Numerous other 'transmitting' tubes, not identified

email tracy@bytemark.com ONLY for more information. The kids on the
sales line have no clue that these exist, so calling the 800 number
will waste your time and my money.

Yes, there is not going to be a "next post" offering it for sale until I get the OK from the family who is trying to liquidate the equipment (if and when that happens).

I'm sure there are many who find equipment or whatever at flea markets, etc. and have no idea what something is worth. I have responded many times to others who asked for an honest opinion on the value of equipment. That is all I asked for.

I don't think there was a need to repost my line about being "baffled" twice, then suggesting that I was looking for offers. I received many replies via e-mail, most of them offers. All of those who responded were told that the unit is not for sale.

I'm still trying to figure out what K0MB's reason was to post that response at all.

Last, K0MB, if your post was just intended to be humorous and not be insulting, then I did misunderstand your response and I apologize for my words. Please understand that seeing a friend go from perfect health to his grave in a little over a year isn't easy. I'm am trying to help his family sort things out, nothing more, nothing less.

Thanks, Randy, for your note. Hope this clears things up.

John

4547. URM25D Tech Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-01 00:00:00 UTC
From: csim88@pclink.com
Message-ID: <3599ae47.56866131@news.protocom.com>
Source record: 102979

Hi,

My "new" URM25D has a small board mounted behind the output attenuator and next to the audio section.

That board has 3 diodes that are very hot.

My manual doesn't show the board or diodes.

The two top-hat diodes are connected as a voltage doubler and the third is a stud mount Zener. The Zener is connected in a way that I can't understand. This circuitry feed the VFO tube heater and is supplying 6.4 VDC to the heater.

I can't find any shorts or other problems associated with this circuit, other than the very hot diodes.

Questions:

1. Why are these diodes almost red hot?

2. Does anyone have a cpy of this circuit?

3. I can't get the bandswitch knob off. I have removed the two setscrews and the knob spins on the shaft, but won't come off. Any ideas?

Thanks!

Bob

In fact, the diode scheme that Bob describes is part of the design. In my URM25, one of those diodes was bad. Since I am not a purist, I replaced the

part with a schottky power supply diode. My reasoning was that the lower voltage drop would keep the part cooler. I too would like to find a copy of the schematic but, the prices the services charge are too high for me. It doesn't make sense to pay more for the schematic that I paid for the equipment.

>What style type are you looking for?? There are many varieties
>depending on the specific radio ...

I'm looking for three small knobs for the Hammerlund SB-200/BC-779-B. The knobs look similar to those used on Collins 75-A1 except the knobs on the BC-779B do not have skirts. They do have a unique pointer. It is metal and extends with parallel sides to a "cut-off" point at the end. The knobs measure 1-1/8" across max.
Actually there are two styles that fit on the receiver, but the style I need have a simple, straight cut-off point at the end. See drawing below.

Many similar knobs have triangular shaped pointers with non-parallel sides. Some are painted white, but none of these are correct for the receiver.

Pointer:

Naah, no need to - you're doing a much better job of it. ;)

> great con-job pumping up the value of an old radio!
> keep it going guys, push the price up to 30gs
> and even higher!

I spoke with a retire Collins man a few *years* ago who relayed a story
to me of a friend who had sold his restored KW-1 to a fellow in Japan
for $46,000 - and the buyer paid to have it air-freighted there. Do you
suppose anyone twisted his arm?

there will come a time when even if you had to sell it no one
> will be able to aford it. always nice to have an old something or other lying
> around that is worth a million bucks but no one wants to buy it. im not sure
> what all the fuss over a KW-1 is any way. for an amateur x-miter its a nice
> example but it doesnt begin to compaire with some of the comercial or mil stuff
> around at a fraction of the price!

Hmmmmmm.....don't know of much commercial gear from that era which
covered the amateur bands as the KW-1 does, with the power the KW-1 has,
and the ease of operation. Remember, broadcast gear and most military
gear was designed for the particular band or frequency it was used on,
not 6 bands with a full KW input.

give me a T-368 with proper audio mods and
> i will run circles around your KW-1.

Never happen. ;)

i used to have a KW-1 and used it for
> over 15 years, but i sold it to a friend back in 1993 when i got my T-368e.

a-HA! So NOW we see the real reason for your post - you were/are stupid!

Bet you'd really cry hard and loud if you knew what I paid for mine.

> the KW-1 will struggle along at something less then 800 watts carrier power and
> my T-368e has no problem putting 600 watts to the antenna.

Wait a minute, you lost me...how does your '368 have no problem at 600
watts while the KW-1 'struggles' at 800? Seems to me you're missing a
very important fact here - about 200 watts worth, by your own
calculations ;)

now lets
> compaire... 600 watts cost me $500.00 and your 800 watts cost $20,000.00 ,
> seems to me to be a no brainer!

Well, I didn't pay $20,000 for my KW-1 and George didn't either, most
likely.

is your s-meter going to know who's got 600 or
> 800 watts? if someone doesn't tell you there running a KW-1 are you going to
> tell by the audio?

Well, if you know how to read an S-meter, then you know it would show up
as a noticeable difference in dB. Not ten times as much(obviously), but
certainly enough to know the difference when the band is noisey.

who in there right mind would spend that much money for a
> rig you can only use part of the year and only in a few places on the bands,
> again NO BRAINER!

There you go again, showing your intelligence(or lack thereof). Where
did you ever get such a foolish idea as that? Can you only use your
'368 part of the year? Only a 'few' places on the band? I didn't see any
restriction on mine saying 'Only use this transmitter between October
and March' or such.

You must be thinking of CB, you're just confused.

so for all you KW-1 owners, have fun and for the ones who
> would be looking to sell, GOOD LUCK.
> for the guys out there who would like to own a KW-1 save your money! you know
> i sat an looked at mine doing nothing for 90% of the time, and thats just what
> all the rest of them are doing!

They are??
Okay, so the fact that you weren't smart enough to know when, where or
how to use a radio means no one else can either? Must be some crystal
ball you have there.

so for all you wana-be AM-BIGSHOTS spend
> $500.00 or a $1,000.00
> and sit back and look at something doing nothing for 90% of the time! doesn't
> sound as bad as having a $20,000.00 WHITE [black] ELEPHANT.

Hahahahahahahaha!!! Now we all know you're lying - you never owned a
KW-1 or you'd know it isn't black!! Remember, many more T-368's were
made than KW-1's. Nice rig, the '368 - I'd like to have one someday.

You're obviously one of these whiners who wishes you had one, could get
one, could sell it for lots of money. This is plain by your email
address and lack of name - not enough guts to back up your off the cuff,
uneducated remarks with a name. It's okay - I'd be ashamed and want to
hide if I were in your shoes too.

I don't agree with the prices out there today either, and it won't ever
benefit me since I don't want to sell my rig. But what would you have us

do, O wise one? Sell everything dirt cheap so someone like you could scoop it up and double or triple the price? I bet you're the type who has to price your items higher than anyone else because 'if they can ask that much, I can ask more!'.

Despite you're limp attempt to discourage people from buying and enjoying something you don't have, I'm sure the present and future owners of KW-1's, T-368's, or any other fine rig will continue to enjoy their rigs - at rest, idling, or at full output.

Say....your name wouldn't happen to be DAVE, would it? Just curious ;)

I have two new-old stock Bud cabinets that are spare to my needs, and so I am offering them for sale. The cabinets are identical and in their original boxes.

I don't have a model number to refer to, so will try to describe them. The cabinets are in four pieces - bottom, back panel, top with sides, and front panel insert. The dimensions of the assembled cabinet are approximately 7 1/2" X 13" X 9" HWD. The front has a bevel of approximately 1" to the opening for the panel insert. The insert has three holes for controls below a rectangular dial cutout of approximately 6 3/8" X 2 3/4" WH. The panel insert measures 11 3/4" X 6" WH. The rear panel is louvered and has a oval cutout at the lower left for terminals.

These cabinets are finished in a lovely grey hammertone (sounds like a Fifties TV commercial, eh?), and would make great VFO, receiver, or transmitter cabinets. They look similar in size and finish to my Hallicrafters S-38E (complete with beveled front panel).

I will sell the cabinets for $40 each shipped, with a discount if I sell both to the same buyer.

Thanks for reading my post!

73,

Tony N8SNC

Dear All,
Lets try boat anchor test gear :-). I haev an Admiralty Wavemeter W2508 which has a wavemeter G73 and crystal calibrator G42 dated 1944 made by PYE Ltd in the UK. I need a circuit diagram or manual for it. Can any body help.

Cheers

Robin

Hello everyone,
I need to generate some 3 phase, 400 cycle, 115/200 volt current at about the 1KW level, INEXPENSIVELY. Most anything will do. Motor/Generator, Inverter, Static Inverter, Generator, Dynamotor, Solid state freq converter, or anything else will do it. Ideally a freq converter which will convert 120v 60cps to 3 phase 400cps 115v would work best in this application.
If you have or know of a device which will do the job inexpensively, I would be grateful if you would let me know via email or voice.
Gratefully,
Ray Van Cleave

Let me preface my comments below. I m not defending AX9909. If someone wants to pay $20k or more for a KW-1, that s their choice. I wouldn t call someone stupid that did. I personally think you could get more for your money elsewhere. I think this was the point AX9909 was trying to make in comparing the T-368 and KW-1. Doing a dollars versus performance or dollars versus quality comparison, IMO, the T-368 wins hands down. To argue in favor of the KW-1 using these criteria is wasting your time and really a bad line of reasoning. However, this does not diminish the collectabilty of the KW-1. The collectibility and associated value (selling prices) are governed by many other factors not considered in a dollars versus performance or dollars versus quality comparison. See my other comments below.

In article <3599D534.1C9@pop.state.vt.us>, tbigelow@pop.state.vt.us wrote:

Ax9909 wrote:
>
> you guys are NUTS! or maybe just in the business of blowing your own horns.

Naah, no need to - you're doing a much better job of it. ;)

> great con-job pumping up the value of an old radio!
> keep it going guys, push the price up to 30gs
> and even higher!

I spoke with a retire Collins man a few *years* ago who relayed a story to me of a friend who had sold his restored KW-1 to a fellow in Japan for $46,000 - and the buyer paid to have it air-freighted there. Do you suppose anyone twisted his arm?

there will come a time when even if you had to sell it no one
> will be able to aford it. always nice to have an old something or
other lying
> around that is worth a million bucks but no one wants to buy it. im not sure
> what all the fuss over a KW-1 is any way. for an amateur x-miter its a nice
> example but it doesnt begin to compaire with some of the comercial or
mil stuff
> around at a fraction of the price!

Hmmmmmm.....don't know of much commercial gear from that era which covered the amateur bands as the KW-1 does, with the power the KW-1 has, and the ease of operation. Remember, broadcast gear and most military gear was designed for the particular band or frequency it was used on, not 6 bands with a full KW input.

give me a T-368 with proper audio mods and
> i will run circles around your KW-1.

Never happen. ;)

Why not? There are plenty of modified T-368s on the air currently. I think it already has.

i used to have a KW-1 and used it for
> over 15 years, but i sold it to a friend back in 1993 when i got my T-368e.

a-HA! So NOW we see the real reason for your post - you were/are stupid!

Bet you'd really cry hard and loud if you knew what I paid for mine.

> the KW-1 will struggle along at something less then 800 watts carrier
power and
> my T-368e has no problem putting 600 watts to the antenna.

Wait a minute, you lost me...how does your '368 have no problem at 600 watts while the KW-1 'struggles' at 800? Seems to me you're missing a very important fact here - about 200 watts worth, by your own calculations ;)

now lets
> compaire... 600 watts cost me $500.00 and your 800 watts cost $20,000.00 ,
> seems to me to be a no brainer!

Well, I didn't pay $20,000 for my KW-1 and George didn't either, most likely.

But obviously some have.

is your s-meter going to know who's got 600 or
> 800 watts? if someone doesn't tell you there running a KW-1 are you going to
> tell by the audio?

Well, if you know how to read an S-meter, then you know it would show up as a noticeable difference in dB. Not ten times as much(obviously), but certainly enough to know the difference when the band is noisey.

Let's see 10log(800/600)=1.25. That's a whopping 1.25 dB difference. I doubt you'll notice that on any meter, especially with QSB. A 1.25 dB improvement in SNR is not likely to be noticed either.

who in there right mind would spend that much money for a
> rig you can only use part of the year and only in a few places on the bands,
> again NO BRAINER!

There you go again, showing your intelligence(or lack thereof). Where did you ever get such a foolish idea as that? Can you only use your '368 part of the year? Only a 'few' places on the band? I didn't see any restriction on mine saying 'Only use this transmitter between October and March' or such.

You must be thinking of CB, you're just confused.

so for all you KW-1 owners, have fun and for the ones who
> would be looking to sell, GOOD LUCK.
> for the guys out there who would like to own a KW-1 save your money!
you know
> i sat an looked at mine doing nothing for 90% of the time, and thats
just what
> all the rest of them are doing!

They are??
Okay, so the fact that you weren't smart enough to know when, where or how to use a radio means no one else can either? Must be some crystal ball you have there.

so for all you wana-be AM-BIGSHOTS spend
> $500.00 or a $1,000.00
> and sit back and look at something doing nothing for 90% of the time!
doesn't
> sound as bad as having a $20,000.00 WHITE [black] ELEPHANT.

Hahahahahahahaha!!! Now we all know you're lying - you never owned a KW-1 or you'd know it isn't black!! Remember, many more T-368's were made than KW-1's. Nice rig, the '368 - I'd like to have one someday.

You're obviously one of these whiners who wishes you had one, could get one, could sell it for lots of money. This is plain by your email address and lack of name - not enough guts to back up your off the cuff, uneducated remarks with a name. It's okay - I'd be ashamed and want to hide if I were in your shoes too.

I don't agree with the prices out there today either, and it won't ever benefit me since I don't want to sell my rig. But what would you have us do, O wise one? Sell everything dirt cheap so someone like you could scoop it up and double or triple the price? I bet you're the type who has to price your items higher than anyone else because 'if they can ask that much, I can ask more!'.

Despite you're limp attempt to discourage people from buying and enjoying something you don't have, I'm sure the present and future owners of KW-1's, T-368's, or any other fine rig will continue to enjoy their rigs - at rest, idling, or at full output.

Say....your name wouldn't happen to be DAVE, would it? Just curious ;)

Source record: 103008

Attention all price police:

Think of the Collins KW-1 as a work of art. If you just put the KW-1 in your shack with good lighting, maybe a spot light shining on it, well placed in the shack, it would definately be worth $25,000, whether you used the rig or not. I've seen paintings go for $250,000 and of course, a lot more.

The KW-1 is an art piece, looks beautiful, is functional, has purpose, and is rare.
So I guess it is now worth what a buyer will pay. But don't knock it.

Now that the Japanese market is falling quickly, you will find that the big players in Japan are no longer playing. The market price will fall some what. You will still see high asking prices. But the actual buy price may be 40% less than the inflated asking number.

However, please don't join the price police. If you don't like the price asked, make an offer that you can afford and want to pay. You can only get turned down. If you don't want the unit, why bother with all the comments.

Regards to all

Steve k2pts

My 25D has no fillament regulator as a factory supplied unit. My unit is
from 1958. I added a fillament regulator useing a voltage doubler from
the 6 volt fillament supply. 2000uF caps, two diodes and a 7806 series
regulator. Reduces the fillament induced FM and regulates the fillament
voltage. That modification has been in use since about 1972 with no
problems.

Source record: 103013
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors

I just acquired a Vibroplex "Bug", and wonder if any of you experts out there can give me some information about it..

It has a base that is painted high gloss enamel, and has gold pin striping with gold petal like designs in the four corners.. THere is no model number, it just says "VIBROPLEX" and is S/N 73089. The last patent # is 1,250,008... It has two round adjustable weights. It has a green cloth cord terminated in the standard "wedge".

It is in a box, that I am not sure is original.. Box has the clamps for a leather strap, but the strap is missing... The box is dovetailed on all four long sides with the back nailed on..It has a hinge on the front cover with a locking catch opposite the hinge side..It is painted grey, and there are the remains of some sort of cloth under a block on the inside bottom of the door.. Maybe it was felt lined.. If this box is original, was it cloth covered, or possibly stained oak?? The box has no tags or marking, which I thought unusual..

I am interested in the approximate year of manufacture, and the current value, altho It is not for sale..

Thanks in advance for any info anyone can provide..

Steve Cuilhe - WA6GSD

Source record: 103017

The power transformer in my 51J-4 has developed a problem I've never seen before. The ceramic insulators have cracked and the rubber insulators under them have turned into resistors. In one case, the resistance was so low that the terminal started smoking. Is this problem fixable? If not, where can I buy a replacement transformer?

Hello,

Am rebuilding an RCA Audio Oscillator but have need of the schematic.
Haven't seen this one listed anywhere in the manual services. If you have a
manual, Any chance I could get a copy?

Thank you.

Let's see... this guy claims to be a radio service tech, yet he can't figure out how to wire a mike plug for a rig sitting right in front of him - an old tube rig at that, with all those large mike jacks and big, easy to trace point to point wiring ???

Chuck,

The Siltronix 1011D was really a Swan Cygnet 270 with just two bands... so if you need parts, look there. In fact, SWAN 250's 350's 500's and 700's used most of the same parts and your right,... some of the parts are getting hard to find so get a parts rig to keep her going...

Now drift... most of the problem is dirty contacts on the band switch. Most hams clean them but..... if you look closely at the VFO box, you will see a small arm coming from the band switch... Yep, there is part of a bandswitch inside the VFO box and... yep... most folks forget to check and clean that wafer switch inside the box. That wafer contact is part of the LC VFO circuit so there's your drift....

If your wondering how SWAN does on morse code, my SWAN Cygent is the best sounding rig I have had in 25 years of hamming. SSB sounds great and I operate AM on 80 meters with lots of good reports.

I love mine and I know you'll love your Siltronix.

Steve,

The year is probably 1920, or there abouts, based on the S/N and Pat
No., which is probably < 1,260,008 > rather than the < 1,250,008 > that
you posted.

I'll defer the value to some of the more qualified experts. ;^}

Would like to sell or trade my excellent
FT-990, AC/DC w/AT, and MD-8 and SP-6.
Asking $1300 shipped, or $1250 delivered
100 miles from Hartford, CT. Or will
trade for some real nice boat anchor
stations.
73, Bob, W1CNY

Hi Don,
the purpose of the rec.radio.amateur.boatanchors newsgroup is
to talk about boatanchors. Your FS-posting is very welcome if
you offer tubes.
There are other newsgroups which are more suitable i.e.
rec.radio.amateur.homebrew

best regards
Heinz

I second that, and at $65 it's s steal. I use my heathkit function generator when I need a square wave, or to drive a speaker directly. If I need a sine wave, I use the HP (I have the metal tube version). I am looking for the cosine wave adapter for my 200CD, if anybody has one, I'd be interested. :)

4601. Help needed URM25D hot diodes!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-02 00:00:00 UTC
From: csim88@pclink.com
Message-ID: <359ace40.3697785@news.protocom.com>
Source record: 102924

Hi,

My "new" URM25D has a small board mounted behind the output attenuator and next to the audio section.

That board has 3 diodes that are very hot.

My manual doesn't show the board or diodes.

The two top-hat diodes are connected as a voltage doubler and the third is a stud mount Zener. The Zener is connected in a way that I can't understand. This circuitry feed the VFO tube heater and is supplying 6.4 VDC to the heater.

I can't find any shorts or other problems associated with this circuit, other than the very hot diodes.

Questions:

1. Why are these diodes almost red hot?

2. Does anyone have a cpy of this circuit?

3. I can't get the bandswitch knob off. I have removed the two setscrews and the knob spins on the shaft, but won't come off. Any ideas?

Thanks!

Bob

Cross-posted to: rec.radio.cb,rec.radio.amateur.boatanchors

I just picked up a Siltronix 1011D for next to nothing, something to tinker with for a while... while I'm tinking, I'd like to know a few things...

1.) Who built 'Em? (as in compnay names, who REALLY built them??!!?)

2.) Where were they built?

3.) Any history anyone knows about them.

4.) Does anyone have a owners Manual or a Service Manual on one?

5.) Anyone know what the driver and final tube is? (the in here is a tad bit lazy...)

I like the radio. I've heard the stories of the drifting... so spare me, please... :-)

No Dave, sorry - had another Dave in mind, lives in the next state. I'm actually very impressed by your recent escapades down your way with that estate - good job saving all those goodies from the dump. Even better for sharing so freely. ;)

> p.s. pretty nasty personal attacks, there.
> "Stupid" and such. Bad form, old boy.

Bad form? Naaah, just to the point. If it wasn't obvious by the initial comments and remarks, it should be by the grammar, spelling, etc.

Perhaps I should have used a more politically correct term like 'undereducated' or 'mentally challenged'? Not likely. He knows how to talk somewhat, he just has no concept of what he's talking about. He's a crybaby - plain and simple. 'Stupid' was putting it mildly.

I was raised to understand that if you're willing to dish it out, you'd better be willing to take it also. For someone to imply my remarks about George's KW-1 were an attempt to inflate the prices or such is not only ridiculous(KW-1's have sold for much more), it's down right insulting. For someone who knows nothing about me to shoot his mouth off like that doesn't warrant a gentle 'kid gloves' approach.

I shouldn't have sunk to his level, this is no doubt true.

sigh I just couldn't resist Now I'll be a good boy and shut up. ;)

Happy hunting Dave - keep up the good 'rescue' work, OM

> Radio Randy

What someone seems to be missing here Randy(not you, I should add) is
the law of supply and demand. Of the 150 production and 2 prototype
KW-1's made, less than 100 remain(I've heard a figure in the sixties).
That means if more people than the existing number or radios wants one,
the prices will most likely climb. Same thing applies with your
wattmeter. If I say your wattmeter isn't worth more than the $5 you paid
for it, but someone is willing to pay you $300+ for it, what's it worth?
Who is right? The person who whines that it isn't worth it, or the
person who proves it is by purchasing it?

I don't agree either with a lot of the practices taking place today.
The audio crowd had made it very difficult for me to find 6550's for my
Central Electronics 100 and 200V, and 6V6's, 6L6's, etc. aren't always
easy to find cheap. But they *have* created a demand for something that
was going the way of the dinosaur, thereby encouraging manufacturing of
tubes again by someone besides China. It's also good that the
Sovtek/Svetlana's are now available so easily, no doubt as a result of
these folks as well as the boatanchor folks.

The other benefit is that some of these money-hungry dealer types who have gotten into radio for the quick buck have ended up saving gear that would have gone to the dump. Does it offset the damage done by over-inflated prices? That all depends on whether or not they have something you want.

Besides, if someone doesn't like the price, they sure don't have to buy it! There are quite a few things I'd love to have here but don't because I'm not willing to pay what I consider outrageous prices. If someone else chooses to, that's up to them. However, if I find a one hundred dollar bill floating down the sidewalk, does that mean I should give it away because I got it free? I think not.

You did what was right for you Randy, that's all that matters. I really doubt you had to threaten anyone or twist their arm to get them to take that Collins wattmeter. ;) Doesn't it say a lot that, for all the people on this newsgroup, so few(1)have complained about it? Consider the source. ;)

Source record: 102936

You're probably right, Todd.
The "price police" are a nasty bunch of buggers.
And they HAVE been told to get lost dozens of times.
I guess one of the definitions of "stupid" is
"someone unwilling to learn," is it not?

Thanks for your remarks about the estate.
It's a lot of dirty, nasty work, but it's FUN!

You're also right about those "quick buck"
dealers preserving gear. I'm proud to say "guilty"
of that one, since I buy these estates and
resell. I don't think I "gouge" people,
as anyone who has delt with me can tell you.
But there's always a "Ham Radio Guardian"
(bow toward Newington and chant
"hyyyyyy-RUM! hyyyyyy-RUM!)
around to tell me how I should give it all away-
to THEM, of course.

It's important to remember that estates aren't free,
and if people like me didn't buy them the gear would
go to the metal recyclers. I just had the owner of
the one I'm working on ask me if that "pile of
aluminum" should just go into the recycle bin.
That "pile of aluminum" was 35 command sets.

It takes money to buy them and money to recover,
advertise and ship them. It's a lot of hot,
dirty and dangerous work.
I had to take out a loan of several thousand
dollars to buy this last estate, and I have to
pay that back. I also have to feed and clothe
my kids. That's not free, either.

I guess the Price Police and the skin-flints
who thump their chest about people who buy
and sell radio gear are like the common cold.
Irritating little germs, but there's no cure for
them. Best to just suffer their nonsense and
go about our business.

Message-ID: <359BA878.10AE6E2F@jps.net>
Source record: 102941

have for sale an HQ-170, serial number 1859. This radio is in very good to excellent cosmetic condition, and in perfect electrical condition. It has had recent alignment and it works very well on all bands and modes. The only cosmetic flaws are wear spots around the tuning knobs and some slight wear on the front panel behind the band switch.

I have used this radio on Field Day back in 1997 and 1996 consecutively to take first place for the CW team for my radio clubs Field Day.

I bought it back in 1995 and since then I have replaced weak tubes, out of tolerance parts and given the radio a complete alignment. I am looking for the best offer above $150 on this radio.

But, now that I am of college age I need the money for other things, so I would like to sell it. I would prefer a pick up, (I am an hour north of the San Francisco Bay Area) but if you must have it shipped I will ship it provided that a professional shipper is paid to package it up before it is sent off, due to my latest experience with shipping boat anchors. (An HT-37 didn't ship too well with my packing!)

So, any takers? E-mail me with questions.....

Adam

Russian R108, 109, 105 radios. Various conditions. These are the Russian Equivalent of the PRC-77 series. They are in Bakelite cases, waterproofing covers and gaskets on the Bakelite doors. Some have instructions in French. $50.00 plus shipping

Russian R114 Radios, new in the shipping crate, with most accessories. $150.00 plus shipping
Most of these were made for Albania. Instructions are in Albanian. Comes complete with antenna wire spools, handsets, headphones, and antenna sections, carrying straps. Some have original manuals in Russian, and some have the accessories for mounting in a vehicle. .

NOTE: most of these radios were Vietnam or Grenada Captures.

US ARC 2 radio console. Good shape. $55.00 plus shipping

Prices are negotiable if you are buying more than one item. Digital photos are available.

4625. Boat Nanny

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-02 00:00:00 UTC
From: David Wright <dmgw@wrengco.force9.co.uk>
Message-ID: <6nggvb$ulh@news3.force9.net>
Source record: 102948

Could anyone help an ex boat owner who has fallen on hard times by letting me Boat Nanny your boat, preferably for weekends or longer, in return for cleaning, maintaining, security and generally keeping the mechanics running (no payment involved either way).

I am a RYA member, have ICC for inland and coastal both for motor cruiser and powerboat, VHF licence and certificate and own handheld, have had 15 years experience of tidal and fast flowing river situations, and have in the past owned several boats. The preferred areas would be eastern UK, but am free to travel anywhere. I am 55 years old, divorced, in good health, and desperate to get some water back in my blood.

If anyone can help please contact me dmgw@wrengco.force9.co.uk

Dave

Normally the colors go like this...

Red - Transmit
Blue - Receive
Shield - ground
White - Audio
Black - ground

They were built by Cubic Swan

> 2.) Where were they built?

California

> 3.) Any history anyone knows about them.

They were cranked out in the latter half of the 1970's to make what revenue they could from the great heyday of the 11mtr explosion. The 11mtr position that is 'supposed' to be receive only was extremely simple to make transmit also.

> 4.) Does anyone have a owners Manual or a Service Manual on one?

Contact Don <nichf@roanoke.infi.net>, I just sold him a 1011C with a copy of the manual and a schematic of the 1011D.

> 5.) Anyone know what the driver and final tube is? (the in here is a

The final is an 8950. I don't remember the driver.

> I like the radio. I've heard the stories of the drifting... so spare
> me, please... :-)

Look, like ANY older tube rig they do drift until they reach thermal stabilization. Who cares!I have loved several of them. The make wonderful 10mtr SSB rigs.

Chuck,

I have a Radio Shack CB Dynamic Microphone, CAT NO 21-1172D. It works
fine in a 1011C.

White - N/C
Black - N/C
Bare - ground
Yellow - the center conductor (or ring if you will)
Red - tip

Hopw that helps, you should find a Rat Shack mic around there somewhere.

Bob Bethman

Thanks to Bob and professor for all your help... I getting it to key
up now with no problem, but I still don't get any audio at all even If
I back off the load and try to see if there is any swing... no audio
at all... this is what I got with the wiring.

tip = white and red
ring shield and blue

but still no audio... could be a tube, anything else I should check?

kind scary working on a tube radio, brings back memory of working some
of my old tube amps...

"audio! aaaaaaaaudio! zap! BAM! Ouch! Tilt! tilt!"

hehehe

I have five models of this radio that I would like to sell. All are in VG condition and work well. The price is $150 each and shipping. I am located in Southport, NC. A picture of the radio can be seen at http://www.bcinet.net/darla/3000.jpg Thanks, Ken Haydu

: Charles (chuck@chucks2way.com) wrote:
: I just picked up a Siltronix 1011D for next to nothing, something to
: tinker with for a while... while I'm tinking, I'd like to know a few
: things...
:
It's a good radio. I have five different types of Siltronix rigs.
:
: 1.) Who built 'Em? (as in compnay names, who REALLY built them??!!?)
:
Swan in Oceanside built them in the late 70's for the 10 meter/ CB sunspot
cycle.

: 2.) Where were they built?
:
Southern California

: 3.) Any history anyone knows about them.
:
First the 1011 plain, the 1011B which was more of a ham rig with more HF
bands. Then, the 1011C was a big jump at the 10 meter/sunspot/CB cycle.
It was a "dual bander" with 28MHz transceive and 27MHz receive from the
factory.
The 1011D was an "updated rig with a jack for an external frequency
counter, acc AC plug and the later versions with a solid state balenced
modulator board.

: 4.) Does anyone have a owners Manual or a Service Manual on one?
:
The owners manual has the service information included.

: 5.) Anyone know what the driver and final tube is? (the in here is a
: tad bit lazy...)
:
Prob a 12BY7A or 6GK6 for the driver, an 8950 for the PA. Be real
conservative with the 8950, they're getting hard to find and real
expensive. My latest mod is to retrofit a current production EL-509 or an
NOS 6HF5/6JE6-6LQ6. I've even seen a 4CX250 in one with an external
supple but that was a special request.

: I like the radio. I've heard the stories of the drifting... so spare
: me, please... :-)
:
Turn it off when not in use, allow a half hour for the VFO to stabilize.
Keep it clean, put a cover over it when not in use. Dust is the killer of
the bandswitch contacts.

I've heard various stories about the Siltronix line. One guy "Joe" claimed to be the force behind the design, but that's not confirmed by anyone else that worked for Swan. They were pretty straight-forward dual band tube radios. Lot's of mods came out from various radio techs. I've got some that have built in frequency counters, etc.
Parts will be a different animal as the units start to fail. Any custom part will be hard to find.

: 73's
: -Chuck

Kenwood TS-180.
This is the all solid state 10 - 160 ham band only tranciever with
provisions (but not included) for any 2 of the WARC bands.
Runs 100 watts and has been a great radio for me the last 4 years.
Has the 250~ cw filter installed. With both Operator and Service Manuals

Also included is the: PS-180 matching power supply
SP-180 matching speaker
AT-180 matching tuner
MC-50 mic.

All in good condx. Will ship anywhere in lower 48 .....
$500

4645. looking HF antenna receiving

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-02 00:00:00 UTC
From: Paolo <casadio@mbox.queen.it>
Message-ID: <359BF6B0.79BFF781@mbox.queen.it>
Source record: 102968

Friends,

I am a sailor and I have a big problem to receive the HF radio in my
language from my country when I am far.
I have a receiver that work from 300 khz to 3000 khz AM and ssb.
I am looking for a best marine antenna to build myself or to buy easly..

My better antenna must be:
Directive, active, small size, marine water resistent and with minimum
noise, easy to build or to find just builded and usefull during the day.

Is It TOO?

Thank you very much.

Paolo

okay, and how was the mode done? fgor CB transmitt?

>The 1011D was an "updated rig with a jack for an external frequency
>counter, acc AC plug and the later versions with a solid state balenced
>modulator board.
>

This is the one I have, I dunno about the balancer board. I don't see
one. I also got two FD1011A frequency counters. and both of them arfe
reading incorrectly. I think I might know why, On the back of my
"silly Sil" (as I i've called them for years.) It says something to
the effect of "plug for acc fd-1011" Well, My siltronix 1011D is a 23
channel version with 10 meters.... well, isn't it true that later

versions were 40 channel?? anyhow, the frequency counters are
fd-1011A's and if those were made for the 40 channel versions, would
that be a problem and cause them to read wrong...

Example:

I'm on channel 1 27.965

counter will say 27.185 channel 19 (waaaaay off in my book)

any ideas...
>: 4.) Does anyone have a owners Manual or a Service Manual on one?

I picked up a Valiant II which has not been used in 20+ years. The rig us very clean inside and out. The VFO bandswitch with the aluminum cam block is stiff working, though, and doesn't spring into place when switched. Does anyone know of a method to free up the shaft (if that's the problem)? It looks clean...is there a need for some type of lubrication?
Also, has anyone had any experience with the Radio Shack contact cleaners? I can't find Deoxit here in Oklahoma City. Thanks and 73.

As a price-point only, I saw a Siltronix 1011C (not D) at the local
Ham shop for $325 (I think), and that price included the Freq. counter
as well as a shop manual and mic...

I am not in th emarket for a $300+ radio, but I did enjoy thinking
about that radio for a few minutes.

As to the diff between 1011C and 1011D, I do not know...

I'll bet that lots of rigs that are considered "boatanchors" use some zeners, transistors and diodes - like, maybe, the R4C, for instance?

Regards,

Bill

Have about 40 used 6 and 7AH 12 VDC gel cells for sale. Also have about 10 4AH 12 VDC cells. All load tested good. PERFECT for QRP rigs and portable operation. I have sold hundreds of these to the QRP boy's on the QRP mailing list and all have been very satisfied. Had a few damaged in shipping and one came back DOA which I replaced for the fellow free of charge but that's it. I am the service manager for an alarm company and we change our customers batteries every 3 years as preventive maintenance. These used cells should provide another 2 to 3 and probably longer service if used and recharged properly. Cells come fully charged and are ready to go. They can be recharged with a simple wall wart charger available at Radio Shack or a 1 amp automotive charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

If you buy 2 of the same I will knock $3.00 off the total price.
Images of the cells can be seen at:

Hi Steve,

The Vibroplex Company is headquartered in Portland, Maine (area code 207)
after being in NY for many decades. Give them a call.

If no luck with them, try Bill Holly K1BH, he's the author of the book and
lives in Kitery Point, Maine.

I'm not a ham or a telegrapher, but I *am* a book designer and had the great
pleasure of designing a history of the company about 8 years ago.

Hope this helps point you in the right direction.

Bruce

Source record: 102901
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

Hi.

I have a Drake MN-75 tuner for sale. It is in very good condition with just few minor scratches. The previous owner engraved some letters on the back of it. The front is very clean without any scratch.

I am selling this because I got a new Drake MN-2000 to match to my C-line. Its electrical condition is perfect. It handles upto 300W.

The price is $100 plus shipping. The only shipping method I use is regular mail with insurance which will cost you only $10 or less. I will pack it firmly to prevent any possible damage in transit. I don't have a manual or box, though.

If interested, please e-mail me.
Thanks and 73.

Dear All,
I desperately need a manual for a Rohde and Schwartz wobbulator. I've even tried R&S but they havn't got one, this being seriously obsolete. It basically works but need calibrating and a good overhaul.

It is an R&S Sweep Signal Generator type SWF, built, I guess, late 50s early 60s. If you know how to align one and can write it down then this would also help immensely

Regards

Robin

> then alot of the other brands which get swamped out on smaller loads

Not all though. I have a cheapie Heathkit SG1271 that uses a push pull
pair of TO-237 transistors and has a 50 ohm output impedance (lower if I
bypass the 47 ohm series resistor, but the attenuator doens't work quite
right then). The 200CD has a 600 ohm output impedance. MY heathkit can
do a better job of driving a speaker directly (like for breaking in woofer
cones, or testing Quad ESL panels).

The ehath sine wave looks like crap compared to the 200 CD though. You
jsut can't synthetically generate a sine wave easily that is anywhere as
clean as one made with a wein bridge oscilator.

I'm working on a battery operated function generator using the Harris 8038
function generator chip. It also generates the sine wave from the square
wave. The heath I have generates the sine wave from a triangle wave.

Sheldon

4710. TRA931 Racal Syncal 30x ? what is it

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-04 00:00:00 UTC
From: Peter Shintani <shintani@funtv.com>
Message-ID: <359DBED7.DB5365ED@funtv.com>
Source record: 102845

HI:
I came across a Racal Syncal 30x, aka TRA931. I dont't have a clue what military equipment is rare or worthless. It seemed to be a portable HF rig, AM and SSB. It also appeared to have a built in antenna tuner, variable loading coil ? It also appeared to accept a screw on battery pack, which was missing. The control panel had small insulated whip antenna mount, and also 4 BNC connectos, 2 of which were for antennas, low and high ?
I couldn't find any instruction manuals or information on the radio. I don't know if it even works. The green plastic case a few cracks, but the control panel looked ok other than a peeling decal for the frequency entry dials.
My questions are:
1) what is this radio worth ? if it is in working condition or if it is a junker ?
2) what frequency range does it cover? 2through30 MHz?
3) is it easy to fix ? ie no exotic parts inside ?
4) is it all solid state, or does it have a tube final ?
5) does it need weird voltages, ie can it be used as a portable on battery power? (the battery case was missing so I don't know what it requires for power.
6) is there somewhere were one can obtain a service manual or any additional information ?

Sincerely
Peter

I would like a Drake TR7 in good working order.
EVERYTHING must work.
Would like to work out a trade for my TR4C or Kenwood TS530S.
Just in case you don't know, the 530S has the WARC bands and is solid state up to the driver & finals. Also has the CW filter.

Both in 8 plus condition and have manuals. The 530 has the service manual.

Low on cash these days so have to work out trade.

Thanks for reading

HG-10B is very nice. Very nice with manual. Non-stock connector so you'll need to hook up an 8 pin octal. Picked up the vfo as a companion for the HW-17......which is a 2 meter AM rig. 10 watts out. Hybrid xmtr. Solid state rcvr. Mint. Manual.

$110.00 for both plus shipping. Package only.

Thanx for the reply Jeffrey!!

Now, after all these years and
my ham radio interest moving more and more
to military radios, I feel shocked to see
all the WWII and Korean vintage radio gear
that has been chopped up/modified by hams
in order to "make them better". I've now
been a member of the Military Vehicle
Collector's Club of Northern California for the
past 10 years and you would be surprized at how much
people will spend for complete/un-cut military
radio sets for their vehicles.

At Standard Surplus in San Francisco, in
1980, I bought a complete antenna kit for the
M4 Sherman Tank. It was the MP48 base, and
2-1/2 sets of the 3-foot antenna sections,
in the military roll-bag, and with the MP50
mounting bracket. all for $15.00. Now, I've
seen the MP48 base unit selling as new-old-stock
for $90.00-$150.00!! =:-o

By the way, my second station, after moving into
the Haight/Asbury area of San Francisco during the
1966/67 summer of love, was a Knight Kit T60
transmitter and a BC348 receiver...

Ah, yes!!...I managed to beg my way into the infamous basement more than
a few times. I was a student at Pacfic Radio School at the time in 1966.
There was a guy that worked down there in the basement of Standard
Surplus, fixing up and canabalizing equipment for parts as I recall.
One time when I was down there, forget his name, but
he was tuning up some of the old /\/\otorola P33BAM portable packset
units.
They were quite the rage back then as most activity on 2-meters at that
time
was on 145.35 via the K6GWE --> A.M. <-- repeater and phone patch was
via
surplus secode dialer units using rotary dials and 2805 Hz signalling.
Any activity on FM was with converted commercial equipment like
/\/\otorola G-series and "research-line", and /\/\otorola
MOTRAC mobile boatanchors. The chrome handles on the old MOTRAC's were
perfect for anchor lines! :-)

I knew a guy studying engineering at Heald on VanNess avenue who had
a Gonset Sidewinder. Now there's a rig that was ahead of it's time!!

:::Patricia Gibbons blushes and corrects herself:

I have to correct this post that I made. The common
surplus /\/\otorola mobiles at that time (1966) were not
MOTRACS, they were the older "T-Power" units. G-series
transmitter and receiver strips in a mobile package
with a solid-state switching power supply..

4730. Ever hear of a MARS "Thunderbird" mobile transmitter ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-05 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <35A05FDF.717F@ix.netcom.com>
Source record: 102778

I have one of these units called a "Thunderbird" and
made by MARS.. Probably the same people that made the
famous MARS SWR bridge that was switchable from 50 to 75
ohm...

This transmitter is for mobile use and is xtal controlled.
The unit was designed to work on both 75 and 40 meters via
a bandswitch on the front panel. Judging by the age, the
receiver that would have been used with this unit would have
been a mobile convertor that was connected to the vehicle's
standard A.M. car radio. This was a common practice back
in the late 50's/early 60's.

The unit has a 12AU7 xtal oscillator, 6AQ5 amplifier,
and a 6AQ5 modulator tube in it...obviously a low
power unit...

Anyone on the newsgroup here have any experience or
information on this unit?? I ran across one that is
new/unused and looks like it was never installed in
a vehicle as it has no scratches on it at all. It
Only has some dust from sitting around in the closet.

If anyone has any info, please post it to the
newsgroup and also to my email: <wa6ube@ix.netcom.com>

Thanx

Trish

Bob,
I had responded before but don't see te posting.

The diodes are a shunt fillament regulator for the oscillator tube.
I have a 25D from 1958 and in 1972 put in a series regulator. It is a
7806 that uses two diodes as a voltage doubler along with two 2000uf
caps (25 volt) from the fillament supply. I have not had any problems
with it. It also reduces the residual FM on the unit. This is a simple
modification. The 7806 is on a small heat sink.

If the bridge is good then order a control board from Astron. It's the
easiest way out. Heck of a deal, board and all components for $20 plus
shipping.

Hello Charlie,

Try the 723 (if it isn't in a socket already you might want to install one), the driver transistor (TIP 29 or TIP 120) and be sure to check the 0.05 ohm, 5 watt resistors in the emitter leads of the pass transistors. I just helped a friend repair one that drove us nuts!! Those silly emitter resistors had opened up!! (Along with some other problems) But, the other problems were obvious as compared with the open resistors!! Especially all FOUR of them (this was on an RS-35A)

If your supply is blowing fuses also check the SCR (across the output - type varies) Best to just disconnect it and, if the supply works OK with it disconnected, install a new SCR. But, do not connect any fragile gear to it with the SCR disconnected.

Good luck,

Bill

Rodney,

It's true that tube rigs will withstand high SWRs better than transistor rigs, the problem is that when you blow up a tube, it can cost several times what an equivalent transistor does now days.

Keep your SWR below 2:1 just to be safe.

I also have replaced many 723's in Astrons. I would do that before giving up. When you change the 723, often you must play with the value of Rx to keep the current limit within the range of the supply. If you change the 723, it works, but limits on too low a current, send email and I will send you a copy of the schematic with the info on Rx.

> transmitter? Thanks,Joe.

Here's what Tube Central told me abt the same kind of thing regarding my TS-520S:

"The 6146 W is a ruggedized version, with tighter testing specs and improved
filaments. It's industrial number is 7212. As for the Kenwood, If the originals were 6146 B, stick with those. The "B" version is uprated to 27 watts, up from 20 watts like the regular 6146, A, and
W. The 6146 B is also known as the 8298 A. Be advised that the 20 and 27 watt
specs are very conservative, and are RMS ratings rather than PEP...
Best regards, Joe Pratt, Tubecntral@aol.com"

Believe it or not, in the service shop I work for, we still see these from time to time. One customer still has two of these, brand new in their wooden crates. His dirt hauler trucks come and go after 20 years of service, but those T-Power radios refuse to quit.

Many city vehicles still run their old Motracs. What I hate is to have a brand new 1998 car or truck and be handed one of these ancient beasts to install. Unfortunately, the customer learns the reality if an old Motrac blows its final PA tube. The cost of those tubes (driver/PA) will nearly buy a brand new Kenwood 30 series radio.

(You will note by that last line that I don't work for an RSS shop, though we do service all Motorola equipment.)

I have two sets of original Mercury Paddles made by the late N2DAN, there were only 300 of these paddles made. Many CW ops believe these were the best paddles made...They original sold for $395-$495 new. These paddles are very hard to come by and a telegraph collectors dream. Ive only seen one other one for sale on the open market. Both have call signs on them. I have one of these for sale for the best offer...If you are not familiar with these paddles go to my website at http://www.telegraph-wireless.com --- go to keyer paddles and then Mercury ! There is a short article and picture of one of them there. They are in perfect shape. If you have questions please email me at N6TT@jps.net ---- And I will be happy to answer any questions ! Please only serious offers.... 73, Steve N6TT / K6KEY

Source record: 102792

Hello, Tubecntral is online for Email requests for any of my vast stock of new and only strong used vacuum tubes. No minimum orders or excessive shipping charges. I stock all types, but the stock varies due to constant sales and restocking. Therefore, a simple catalogue is not available.
But I know what I have, so if it's something as simple as a miniature radio tube or something like matched audio tubes, it's most likely available. European types also. I guarantee everything sold, and I'm the only guy here, so it's custom person to person dealings. I also have antique NOS resistors and caps, and copies of original transformer catalogues . If you have specific requests for tubes or anything else, please leave them in my E mail box.
Thanks to all !
Joe Pratt, Tubecntral@aol.com

> anyone have any info of the Amperex 3-500Z graphite tube,

Hi Tim---hope this helps a little:
Just replaced my two Eimac 3-500z (after >25 years) with Amperex 3-500z graphite---Purchased from RF PARTS in San Marcus Ca. First, I don't usually plug suppliers but I will report that I was extremly pleased with responses from RF PARTS.
On the tubes. At first I was disappointed in the Amperex graphite tubes. After burning the tubes in for 24 hours, test indicated that one tube was drawing about 20 mils more grid current than the other---which is considerable for 3-500s. Also, the graphite tubes require more drive power(10 to 20 %) so if your a little short on drive you might consider another brand of tube. The graphite plates show no color which I found has both pros and cons. There is a good feeling when the tubes appear to be running cooler (appearance only) and the graphite tubes offer an additional 100 watts dissipation (assuming you have the air flow). However, like so many others out there, I was able to tell by the color of the old 3-500s just how well the amp was loaded and whether it was running properly. Because the graphites show no color, I believe you distroy a set of tubes before you know it. Of course, with many new amps, you can't see the tubes anyway.
After using the graphite tubes awhile, they settled in a bit. The grid current differences are minor now. The output is a little lower for the same drive but not by much. However, with adequate drive the Amperex graphites will provide at least 15 to 20% more output. Only time will tell now---I like the extra dissipation for RTTY & AM.
RF PARTS has there own lable 3-500z which they offer in MATCHED PAIRS. This offering comes with a two year warrenty and the price is well below the Amperex tubes and competitive with anyone. I would probably choose these if I was to do it over. Also, RF Parts carry some less expensive 3-500z tubes for just under $100.
Good luck Tim, hope this helps---if you need more info email me direct if you'd like. 73 Bill N4MXF@aol.com

Did you miss the tank? (at C&H) - they had the thing for years! Does bring back some memories - I remember digging through piles of boxes in the "back" at C&H - and finally finding a PE-103 - still sealed in it's original steel container... Never did get that particular BC-654 going - just too many problems - but had a ball playing with it anyway. (wouldn't mind finding that PE-103 - last time I saw it - it was in my Dad's garage - but since he won't let anyone (and I mean anyone) in that garage - sure would be nice on the 654 I have now!

From: Bob Weiss <bweiss@carroll.com>
Message-ID: <35A136D9.DB994421@carroll.com>
Source record: 102808

I recently purchased a heathkit OP-1 oscilloscope (late 50's vintage) in UNASSEMBLED condition. The only problem was, no assembly manual. Ordered a copy from W7FG, but his original is missing a few pages. (discovered this with the kit half assembled !) Normally this wouldn't be too bad for simple repair/operation use, but I need the COMPLETE assembly procedure. Does anyone out there have a copy of this manual? I am hoping not to have to figure out several pages of step-by-step instructions from tracing the schematic! Any help is greatly appreciated.

73,
Bob Weiss

The good news is that my recently acquired National NC240D is coming along nicely.

The bad news is that the funky audio derived from an open circuit in one side of the output transformer primary. Need a suitable replacement. It uses 6V6's at around 200 v, so I think about an 8k ohm CT primary at 10 watts is about right. This is an open frame unit that mounts on the loudspeaker (2 7/8" centers).

Source record: 102819

Hey guys,

I have a Hallicrafters SR-500 Tornado (very nice condition BTW) and at present my only antenna is a random wire strung around the ceiling in a couple of rooms in my house. On 40m, the lowest SWR I can get (with a tuner) is about 3:1 -- will this hurt the rig? I can tune the driver & final to get a good bit of power out & I've heard that tube rigs can run OK into higher SWR. Is this true? Any other operating advice for this situation? I've been a ham for a few years, but this is pretty much my first try at HF operation.

Thanks for the help,

Rodney - KF4COV

Hi Patricia,

Eugene Rippen's "Tube Type Transmitter Guide 1922-1970, on page 92,
lists what I think is your radio:

MARS, transmitter. PAUSAN COMPANY, P>O> Box 546, San Rafael, CA.
(1960). Mobile transmitter. 75 thru 40 meters. 12 watts input AM.
$49.50.

I hope this helps you,

Bruce Sugarberg, WA8TNC

4809. Re: SWR question on old rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-07 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <15637-35A210B1-2@newsd-163.iap.bryant.webtv.net>
Source record: 102733

I got an old cyclone myself.

Most of these 60/70's rigs use TV sweep tubes. Since TV's don't use sweep tubes now, that's why they are now so expensive.

Heat is what destroys tube finals. These TV sweeps were made for 35 Watt continuous (100%) duty. This only occurs during Tune UP and CW (if you hold down the key)

SO... limit your tune up time to 20 seconds. Let them cool and do it again if you have to... (you shouldn't - 20 seconds is a long time). You can also reduce the RF drive... and do a pre- tuneup. Of course, please check the freq before you do all this!

Once it's tuned, CW and SSB are OK because peaks only occur very infrequently... unless you lock your key down or you say "hoooola" for 5 minutes straight... then you deserve a final melt down!

I have gone as high as 10:1 with no problems... but then again, it wasn't much of an antenna...

Tuner... Had same problem. Here is how I fixed it. Take some steel wool. (Brillo is OK) and take it apart with your hands. Stuff a small amount into a plastic bag. Take plastic bag and stuff it inside the coil in your tuner. You have just increased inductance... add more steel wool until you can tune your ant on the lowest band you need.

E-mail me your results. I only posted this in case others are having the same problems.

Good God!!

I paid 19/6d (19 shillings and sixpence) for mine (95p) and it's still going strong! Only needed to change the 807 once after aparticularly long weekend on the Echo-Charlie (6.5 - 6.7 MHz) pirate band in about 1971. That was before the GPO shut me down, but they didn't get the rig. How much could I ask for mine now, complete with the original manuals and operators guide?

TO MR "PRICE POLICE"I have absolutely no problem selling ANY of those tubes. AS A MATTER OF FACT all of those were sold at EXACTLY those
prices WEEKS ago... I have plenty of satisfied customers.
If you could get the same tubes cheaper elsewhere, why don't you? as far as the PRICE POLICE goes, you should check other sources if my prices don't suit you. That's MY opinion, of course.
As a matter of another fact, I now have a jammed mailbox from people who want these tubes, now that you took it apon yourself to
repost MY post. I have to spend MY time answering all now, and I don't have most of these in stock at the moment.... I did not appreciate that, and don't believe I deserve it.
Sincerely, Joseph Pratt,
Tubecntral@aol.com
Thank you,

Excellent amplifier for 2 meters. Pair of 4CX-250's complete
with built in power supply, metering and control circuits, and RF
deck. Requires less than 20 watts of drive for 750-800 plus watts
output. EXCELLENT construction in two 19" rack panels. This is a
great amplifier, and will run lots of power for a BIG signal on 2
meters. $795 plus UPS.

Excellent amplifier for 6 meters using THREE 8930's in RF
deck. Three 19" rack panels housing power supply, metering and
control circuits, and RF deck with blower. Time delay in power
supply, antenna switching, and full metering. This amp will run
big power on 50 Mhz. for a BIG signal. Requires less than 20 watts
of drive for full output. Price is $795 plus UPS. Commercial quality

construction, excellent equipment.

Price Police...HA! We're HAMS.
We're the guys that complain at paying
5 measly bucks to get into a SwapMeet!

We're the guys that can't afford deodorant
or refuse to get our teeth cleaned!

Why, we can't even see to it to buy our
XYL's a lousy Birthday card...we'd rather
spend the 3 bucks on a Teflon PL-259!

As for tubes and tube prices...I've got
a basement full of NOS tubes that I've
been collecting for the past 15 years.
I've got WE, Gold Lions, Gold Pins
(Realistic), 8950's, 2A3's, gobs of
12AX7's and 6550's. I let the kids
use them for target practice for their
BB guns!

Hey, let the Free Market go at it and
decide price...who cares it the tube
guys get big bucks for their tubes...
if you want to spend years scouring
the Fests to save a few bucks, good
luck! Some hams would rather allow
the tube sellers to do this for them...
and pay the price. So be it.

Well, I'm going back to the tube pile
here in the basement...the kids want
to piff a few 6LQ6's in the tube tester.
They like juicing up the filament
voltage full-tilt till the tube blows.

73...Pat.

I can attest to that, Joe; I'm one of your satisfied customers.
Very satisfied, in fact, with your tubes, your prices, and the
excellent service which you recently provided.

> If you could get the same tubes cheaper elsewhere, why don't you?

Because... a) He's full of baloney.
b) He isn't really interested in buying.
c) He thinks someone made him a "price policeman"
d) All of the above.

Choose "d" and you probably won't be too far from being correct!

Hi.

I have a Drake MN-75 tuner for sale. It is in very good condition with just few minor scratches. The previous owner engraved some letters on the back of it. The front is very clean without any scratch.

I am selling this because I got a new Drake MN-2000 to match to my C-line. Its electrical condition is perfect. It handles upto 300W.

The price is $85 plus shipping. The only shipping method I use is regular mail with insurance which will cost you only $10 or less. I will pack it firmly to prevent any possible damage in transit. I don't have a manual or box, though.

If interested, please e-mail me.

Thanks and 73.

Well, I guess I have to say wait minute and lets find out
what is going on....I just walked in from dinner and find
this message to me (below) and I don't have the foggiest
about what is going on. I have never received ANY email,
any anything from you about this situation. We have exchanged
email several times on other subjects and you have never made
mention about anything.
Quite frankly, I don't know what is going on so I am going to
have to be brought up to speed on what your email is all about.
I would suggest that you give me a call tomorrow at my office
on the phone 806-794-3692 and lets start at the beginning. If
I know what is going on, I am a whole better at resolving a problem
than starting from where I am right now which is not having the

foggiest.
Lets start by talking on the phone since it is very obvious that
for whatever reason your email sure hasn't made it here to me or
I wouldn't be in the dark about this whole situation.
I guess that I am somewhat astounded to get this note more than 5 months
after I assumed that we had a good, satisfied, and finished deal with no
communication since you told me you had received the radio and were
enjoying
it.
I would also assume that if you had some kind of problem that you would
have attempted to contact me either thru the US MAIL or by telephone to
attempt to discuss this matter with me so that it could be resolved if
you
did not receive a reply to your email....
Call me tomorrow so that we can discuss this.

Dynamotor Supply DM/64a=12volt in 275v/150m out & on the same chassis #42486 (Stromberg Carlson) 12volt in 680v/210m out. There are also capicators & relays on the chassis. Not really sure what it was originally used for, but it was in the collection of a local boat anchor person before he passed away, so I'm sure he had a use in mind.

Its somewhat heavy, but will feel light as a feather to someone who is trying to power up some WW2 gear with the real thing..$40.00 Bob

4844. Re: Swan 350-C Finals ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-07 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <16717-35A2A1A7-38@newsd-162.iap.bryant.webtv.net>
Source record: 102768

Originals were 6HF5's TV sweep tubes (also used in Hallicrafters and other transmitters in the 60's) but there was a upgrade mod for the cheaper 6LQ6's sweeps which were also used on the Swan 500's, 700's and Cygnet 270's.

The 8950 is the industrial version of the 6LQ6. The plate structure and the mica holders are thicker and more rugged. They are very expensive, if you can even find them at all.

If you want to make them last, then do three things:

(1) Limit Tune up time to 10 or 15 seconds. Do it only when you really need to. Nearly all sweep tube damage is done during tuneup since you are dumping 200W on the tube plate that was designed to disipate 35W. (100% duty cycle)

(2) Lower the bias to zero. You will notice you drop a few watts but the finals will run cooler in the long run. If you do on the air comparision tests you will find the guy at the other won't notice the difference.

(3) Limit mike gain. Most try to crank to maximum "talk power". What your really doing is going past the linear zone of the final and having the ALC attempt to compensate. It does it but not before the limit is exceed generating splatter. This "ALC pumping" effect eventually damages the final tubes.

If you do the above you will find:

(1) You cause less QRM
(2) You will sound great
(3) You will not cause splatter
(4) Your rig will last forever.... almost...

4845. WTB Socket for 803

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-07 00:00:00 UTC
From: KC2WE@aol.COM
Message-ID: <a9b6d7d4.35a2a393@aol.com>
Source record: 102769

I have some 803's and they use the same ceramic socket as a 4-125/ 4-250/ 4-400A. A johnson 122-275 ceramic wafer type or equiv. is fine. These are quite common.
A commercial source could be Fair Radio Sales at around $10 ea. for a used one or maybe you could do better at a hamfest.

4847. Which BA performs best?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1998-07-07 00:00:00 UTC
From: Gordon <ziggy7@earthlink.net>
Message-ID: <35A2DB08.78411413@earthlink.net>
Source record: 102771

Can any of our beloved old boatanchor receivers really compete with a good modern receiver like the R8 on shortwave? (I have a couple of nice old tube sets, but the only modern radio I've tried is the Grundig YB400). I would appreciate your opinions on which tube set to look for for best performance, assuming they are all working well. R-390? RA-117? HRO-60? SP-600? 51J-4? HQ-129?

4848. FS: 12BZ6, 6DC6, other tubes
